December we are assured all the banks in the country will have resumed payment in the usual way; that is to say, they will have so much paper money on hand that they can pay anybody and everybody with their notes new and old. Here, again, we are pulled up by the wonder how any person of average intelligence can suppose that a shower of fresh notes, secured upon national credit even though they in a sense may be, scattered all over the Republic, is going to put things back to where they were before the consequences of past demented gambling made their appearance. We have been much exercised by the drafts of gold made upon us in order that credit in the United States might be propped; and the sudden and excessive demands have contributed more than anything else to drive our Bank rate up to 7 per cent. That is inconvenient, and we shall be glad to see the end of this stress, but we need have no particular anxiety about the ultimate destination of the gold if we ourselves have not been indulging in the same excesses as the States. It will probably all come back again and much more before six months are gone by, driven out by the depreciated paper money with which the Republic is now being deluged. We agree fully with Mr. Fowler, chairman of the Committee of the House of Representatives on Banking and Currency, who made a speech in the end of last week denouncing the measures adopted by the order of Mr. Morgan, Mr. Rockefeller and other controllers of the President and his Cabinet for relieving the strain. Although a Republican, he feels compelled to characterise the President's action as unwarranted and unfortunate. "The Government," he says, "is not justified in issuing Panama Canal bonds, as it has an overflowing Treasury," and he goes on, "by this hypodermic injection of another $50,000,000 of fixed, immobile currency into our sodden mass of bond-secured bank note circulation, which never responds to the varying conditions of commerce because it is not directly related to the business of the country, we have made a bad condition worse." We fully agree with this criticism. An inelastic paper money issued at the bidding of gamblers and out of all relation to the varying necessities of the country's genuine commerce is the sure forerunner of financial affliction at all times. Therefore, the "relief," as it is called, afforded by this paper money will in the end make the conditions surrounding business in the United States much more unsatisfactory than they have been almost down to the time when the crisis broke out. Cheap "rag" money will drive out the gold—of that there can be no doubt whatever. Meanwhile, the Bank of Montreal has helped New York with £100,000 of the metal, and is importing another £200,000 for the same purpose.

But the well-informed New York correspondent of the *Manchester Guardian* bluntly states that the efforts of Mr. Cortelyou to stuff the country with more paper money has ended in failure, that only £60,000 of the certificates have been subscribed for in New York and £40,000 in Boston. Mr. Cortelyou has been compelled to stuff his paper into the banks which have stipulated that three-fourths of the price paid should be immediately redeposited. From this source we also learn that the public revenue is sharply declining, as we knew it must do, so that a deficit is plainly in sight for the current fiscal year. And the only remedy for all the ills of republics governed by children and demagogues, or financiers and imperialists, is more debt, more paper money. With every fresh issue of debt all the people and their Press shout in chorus, "Now we are all right and strong."

We shall for all that get back our gold by and by, and all the sooner, indeed, because of the way in which the gamblers are still holding up prices for grain and cotton. The grain position tempts them to do this, and as long as the banks and the financiers on whom they lean are not compelled to pay their creditors in hard cash the speculators can procure the credit necessary to enable them to dam up the current, as it were. Statistics also relating to both the grain and cotton crops encourage the speculators for the rise. The latest estimate of the Agricultural Department at Washington counts upon a shortage of nearly 374,000,000 bushels or 13 per cent. in the yield of maize compared with last year, and this decline is accompanied by a degradation in the quality. Altogether the crops of maize, wheat, oats, barley, and rye are estimated by the same department to be 760,000,000 bushels short of the total yield in 1906, 440,000,000 bushels below the yield of 1905, and only about 18,000,000 bushels above that of 1904. As the cotton crop is also estimated to be considerably short of the world's estimated requirements the temptation to speculators for the rise is irresistible. They furiously strive to keep prices up, and, if possible, hoist them still further. "You must come for our grain and cotton," they reason, "whether you will or no; therefore we are going to make you pay the highest price possible for them. Accordingly, the cotton and grain bills sent forward to be discounted here, and with the proceeds of which the gold has been purchased in our market, do not seem to be yet nearly covered by shipments of the commodities. If this gap between the actual supplies and the paper created against prospective shipments should continue we may soon see a violent reversal of the position, and the American exchange might go to a point that would force gold out of the country faster than it has gone in. The new paper money is from this point of view purely a weapon put into the hands of the forestallers.

This all serves to indicate how purely artificial the whole situation in the republic still is. The financiers continue to play their old game, still exchange paper for paper, offer paper for gold, still hoist prices, corner supplies, and generally live in a world of magic, incapable of recognising the essential change which is taking place all around them. There will be less demand in Europe for the food supplies of the United States in spite of our short and inferior harvest on this side. There will be other supplies also, both of grain and cotton, so that in a little time these "holders up" of the products of the soil in America will find that they have out-stayed their market. When they make that discovery prices will come down with a run, and it only requires the exchange to go against New York to bring about a renewal of the recent panic on a much more dangerous scale than the present. What of that? Have not the Hill-Harriman or Harriman-Hill railroad rivalries been laid aside? These market wizards are henceforth to work in "harmony," and the Union Pacific "holding" company is about to be launched.

We get a few of the effects of the artificial stimulus given to trade by American financial methods in some figures published by the New York *Commercial Chronicle* relating to the Fall River Cotton Mills and their business for the past year, a glimpse also of the peculiar financial ideas whose operation has brought the country to its present pass. These cotton mills have been phenomenally prosperous of late, and have been paying high dividends; yet no sooner does a credit-produced crisis break over the country than they have to pull up, to curtail production, to dismiss men, and otherwise bring themselves violently round to deal with the new conditions. For the past year, however, the profits of most of the 33 companies included in the *Chronicle* summary have been stupendous and their dividend payments extravagant. Not content with distributing cash as dividends, some of them have added dividends in shares, so as to make their position all the more difficult when the bad times come. The King Philip Mills, for instance, has added 50 per cent. to its share capital, and distributed the whole of that by way of excess or bonus dividend. Another company has doubled its capital by distributing stock as dividends, and pays the same cash dividend on the larger capital as on the smaller. Still another company has added 25 per cent. to its capital by shares given away, and has trebled its rate of distribution in cash. The whole amount paid away by these companies is really insignificant, but that does not alter the fact that their finances are obviously conducted in the most regardless fashion. Altogether during 1907

the dividends paid away by these 33 companies has amounted to only £540,000, or an average of little more than 11 per cent. upon the capital, real and nominal. This, however, is exclusive of stock dividends to the amount of £400,000 also distributed. One company, the Troy Cotton and Woollen, has paid 67 per cent. on its capital, and several others have paid their 20 to 35½ per cent. The current year, in fact, has been the most prosperous the companies have ever seen, and they have made no provision whatever for the rainy day. Therefore, the future is anything but reassuring.

None the less do the necessities of the great spenders impel them to make further demands on the money market. Early in the week the board of the New York Central Railroad announced that it wanted $30,000,000 more capital, and that it expects to raise the money on fifteen-year 5 per cent. equipment notes "covered by all the Vanderbilt lines." The notes are to be redeemed at the rate of one-fifteenth annually, and for the moment $20,387,000 of the total issue will suffice.

A vivid description of the existing state of affairs appeared in last Monday's *Financial News* from the pen of a New York correspondent. After pointing out that the Government had deposited almost the very last dollar of its working reserve, or something like £25,200,000, and that the National banks in New York City alone had issued Clearing House certificates to the amount of £20,000,000 up to the middle of this month, this example being followed by Clearing Houses throughout the country, while at the same time many of the banks were falling back upon cheques instead of notes—industrial concerns paying their wages by cheques which the recipients found it difficult to cash—he went on to observe that the country has tumbled back from the height of currency inflation into the depths implied by business conducted on a cash basis. And the worst aspect of all is found in the complete isolation of the various divisions of the country. Interior banks have withdrawn their balances from New York, and are no longer able to sell drafts on that city to merchants and others desiring to remit. The debtor is therefore driven to send forward a cheque upon his local bank, which is valueless for any time within from one to six weeks because the bank on which it is drawn has no cash wherewith to pay on demand, and we should judge also no credit in New York against which the draft can be offset. New York banks accordingly receive these country cheques merely for "collection," and at the time the correspondent wrote it was taking from a week to a fortnight to collect cheques on banks in Philadelphia within ninety miles of New York. Currency is scarce, partly because it is hoarded by nervous individuals, but it is also in danger of becoming hopelessly discredited over extensive regions of the Republic through the essential insolvency of the banks.

And it does not seem as if the measures taken by the Government are being welcomed with any great enthusiasm, in spite of this currency scarcity and deadlock in banking credit, for up to the middle of this week only about £8,000,000 of Panama bonds were sold and the short-term notes to be utilised for increasing the currency were by no means being run after. The Morgan syndicate, however, is said to be arranging to take up $20,000,000 of the New York City revenue bonds, and the Carnegie combine has done a fine stroke of business in Tennessee Coal and Iron company's shares. These were to be exchanged at par for Steel Trust 5 per cent. bonds at 84½. News of the deal incited to selling, and the Trust people have picked up enough of the bonds at or about 80 to pay for all the Tennessee shares offered.

We omitted to mention at the time it occurred that the New Haven and Hartford Railroad had withdrawn the proposal to issue new stock, finding it impracticable in present circumstances. In place of stock the directors now announce the issue of $43,121,200 in 6 per cent. convertible debentures due in 1948. That is a most significant fact, leading us to infer that the road which has been over-financed and under Mr. Mellen's guidance drawn into all sorts of adventures, is not in a position to offer short-dated notes on any terms. That a property hitherto considered excellent and in high credit should be compelled to issue 30-year debentures bearing 6 per cent. interest is one of the most startling examples hitherto given of the distress which has overtaken the multiplying financier in the States. To be sure these debentures may be converted into stock at any time after January 15, 1923, dollar for dollar, but even that is a long time ahead—a much longer time than any other distressed railroad company has hitherto been compelled to grant. Holders of convertible debenture certificates to the amount of $10,000,000, dated 1905 and convertible into stock between January 1, 1911, and the same date in 1916, are to have the right to subscribe for these new debentures on the same terms as the stockholders are granted at a later date.

Among the rumours of the week is the stale story that the Bank of France is at last going to lend New York £12,000,000 in gold, to be sent in weekly instalments of £800,000 each, but even Wall Street could not swallow that, so its contradiction is superfluous. Then it is said that war has broken out between Harriman and Gould because Gould is suspected of being a banker of Fish in the fight for control of the Illinois Central. Will they burn much of each other's paper? It is not, perhaps, a rumour that the benevolent John D. Rockefeller wanted a 25 per cent. margin on a loan of £100,000 which he was asked to grant to a small Trust in temporary difficulties. The Trust got the money elsewhere, and now doubts the genuineness of "Jawn D.'s" philanthropy. The security tendered was old New York City bonds. But it is as yet rumour only that foreshadows another financial juggle. The coal lands of the Reading company are going to be separated from the railroads, "to the benefit of stockholders." More benevolence!

Like so many other American railroads, the Great Northern has to confess to a set-back in its earnings for the year ended June 30 last. Gross receipts rose by $3,868,122, but working expenses went up by $6,710,000 and taxes by $279,327, so that there was a decrease of $3,121,000 in the nett earnings. This made no appreciable difference to the company's capacity to pay its usual dividend, and there are few examples of American railway ballooning finance more striking than that afforded by this company's history. It scarcely owned any railways of its own at the start, but has always been one of the most enterprising and determined of the so-called "holding" companies, and at the present time controls, alone or jointly, something like 15,000 miles of railroad, including the Chicago, Burlington and Quincy system, of which it is half nominal owner along with the Northern Pacific Company. Its own captured system, which is, as we intimated last week, about to be consolidated by the absorption of the leased and other lines, extends to about 6,500 miles, 209 miles having been added to it during the past year. It is almost entirely a single line system, and we have no idea at all how it has been equipped, but the usual remaking is going on here and there all over it. Wooden bridges are being replaced by bridges of stone or steel or the space is being filled up by solid embankments and culverts. Changes of line and reduction of grades, widening, raising and restoring of banks with a variety of other operations are in active progress, all showing the first work done was scamped, and naturally the expenditure of capital is imperial in its magnitude. At the end of 1905-6 the share capital was $150,000,000, but an increase of $60,000,000 was then voted and partly issued, so that the company is in the fortunate position of being fairly well supplied with funds at present, having received $34,616,000 on the new issue of shares up to the date of the balance-sheet. Altogether its properties are capitalised at £78,410,000, of which £41,504,000 is in the form of bonds, but we are by

no means sure that these totals embrace the whole of the outstanding obligations. Perhaps next year's balance-sheet, which ought to be simplified through the absorption of so many dependent or leased lines, will throw some light on this point. All we can guess now is that the demand for money must continue imperious and large for many years to come.

It is impossible not to admire the brave face put upon affairs by bankers, politicians and financiers in Canada, and we hope they will be able to worry through the winter without coming to a dead stop at any point. At the same time it seems a pity they should so persistently strive to minimise the intensity of the crisis in the Dominion. Not only has money been dear there 7 per cent. and upwards for a long time back, but we are assured by a private correspondent that there is some £12,000,000 of Canadian bank money locked up in New York because the bankers there with whom it is lodged cannot refund. Then there is the poor crop, which cannot be sold, much of which is not worth moving at all, and the consequences of this disaster upon the raw North-West may retard progress there for years to come. It was all the more courageous on the part of the Canadian banks to refuse Mr. Fielding's offers of assistance, and we think the better of them for their resolution, if they had the requisite security handy. To have accepted a further supply of currency from the Government printing office against the deposit of perhaps the bulk of their remaining good securities could only have postponed the day of reckoning. It is much better to face it now, and if possible get money out of the old country on one pretext or another. From somewhere money must be had, else the coming winter in the Dominion will be the most memorable for a generation.

Passing Events.

An address, interesting, well-informed, and thoughtful, as usual, was delivered on Wednesday afternoon to the Bankers' Institute by Sir Felix Schuster in his capacity as president for the year. As usual, Sir Felix spoke with confidence of the future, and presented a reassuring picture of the condition of our own money market. At the same time, he was cautious with regard to the outlook, and did not by any means take the view that the effects of the American crisis will soon be obliterated. Like other people, he found it difficult to estimate the consequences likely to grow from the currency inflation measures of the Washington Government, but he would obviously be far from surprised were one of them to be a rapid return of the gold recently taken away from us. Is it, however, true, that to the United States gold purchases alone the excessively high rates now prevailing on our market are to be ascribed? Does not Sir Felix's own description of the great expansion in business, the much larger overturn of credit revealed in the return of the London Clearing House, and the general tendency the world over to launch out, indicate another source of dear money which should qualify the statement just cited? Our own credit operations have their share in producing the existing condition of our money market, and he himself, when replying to the cordial vote of thanks accorded to him on the motion of Mr. F. Huth Jackson, pointed to the fact that we had two years running been obliged to go to France and borrow gold in order to tide us over the autumn pressure. This also seems to us to indicate that we have been consuming our capital faster than it could be reproduced by a too unrestrained expansion of credit. In the main, however, we agree with the views put forward and consider the general position of this country wonderfully sound, all things considered. There are weak places, and must be weak places after so many years of prosperity, but we have seen nothing thus far to indicate that we are in danger of a credit collapse such as has overtaken the United States. And it is comforting to have a man of Sir Felix Schuster's weight and experience to support that view.

An opportune illustration of the automatic way in which warlike expenditure in time of peace increases was furnished in the end of last week by the *Times* Berlin correspondent. He analysed the German naval estimates for the coming year, showing that the amount to be devoted to new construction was £5,716,500, or £1,422,500 more than in the current year. Gun armaments are to take £608,000 more, torpedo armaments £72,500 more, and mine armaments £24,000 more. The most interesting fact he brings out, however, relates to the increased cost of new battleships. By the law of 1906 the price of a battleship was fixed at £1,825,000, and the cost of the new cruisers was to be £1,375,000. Owing, however, to the further increase in the tonnage and improvements in torpedo armaments, the actual cost of a battleship, including its equipment, is now estimated at £1,838,000, and of a cruiser at £1,383,000. Then the upkeep charges mount in proportion, and the first instalments to be applied to the payment for work done upon the new ships are all increases. Thus a first instalment for the large cruiser "G" comes to £410,000 as compared with the initial £255,000 voted for the similar cruiser "F." The *personnel* of the navy is also to be increased by 153 officers and 3,423 petty officers and men to a total of 2,468 officers and 47,855 petty officers and men, and the cost of maintaining the ships in commission is put at £1,836,000, while the high seas fleet will require £1,082,180 for its maintenance. Then £40,000 more is to be paid for ammunition and a vote of £65,000 is put down under the head of experiments and improvements in gunnery, repairs to ships in commission being at the same time raised from £620,000 to £1,000,000. The vista is endless. The vote for submarines is up by £200,000 to £350,000, and by 1909 this vote will have reached £500,000, and the following year £750,000. The larger ships built necessitate bigger docks, and a new dry dock on the Lower Elbe is to be constructed at an estimated cost of £1,500,000, which will doubtless be much exceeded. Anyhow, by 1911 it is anticipated that, at the present rate of progression, the navy of the German Empire will cost £23,000,000 per annum. If this kind of thing does not spell bankruptcy we should like to know how solvency is to be spelt.

After more than a week of turmoil and suspension of traffic, by which enormous losses have been inflicted upon manufacturers and the community generally, the Indian Government has assented to the appointment of a Conciliation Board *ad hoc*. This board, in other words, is not to be a permanent institution established in imitation of the colonial example, but merely a number of people adventitiously hustled together for the purpose of trying to settle the strike actually in existence on the East Indian Railway. Perhaps, however, the first step may lead to others and ultimately to a consolidated management of Indian railways directly under the control of representative bodies composed not merely of officials and dependants of the Indian alien bureaucracy, but of representatives of the trading and travelling classes of the country. It has always seemed to us an indefensible proceeding on the part of the Simla Government to buy out the railway properties at the cost of the native, and at the same time to reassign their management to the officials of the old companies. A duality of control was thus established, in appearance at least, and practically the whole business was left in the hands of boards in London and their representatives in India. As we have said before, the East Indian Railway Company has been conspicuous amongst the railways, not only of the Empire, but of the world, in the niggardliness of its expenditure. All the aim of the directors appears to have been to wring as high dividends as possible out of the undertaking, no matter at what ultimate cost to the Indian people and Government. Some of the fruits of this policy are now being reaped, and we regret to see that the arbitrators or board of conciliation appointed to deal with the grievances of the men hardly seems to be made up

of the best materials. All we can do now, however, is to wait events. But who was it that told us a week ago that the strike was all at an end?

Good rain, the Viceroy telegraphs to Mr. Morley, has fallen again in Southern India, with light showers in parts of Burma, Assam and Bombay. Elsewhere our Indian Empire was rainless last week, and conditions, he adds, are practically unchanged. This means that famine draws nearer, and already relief works are being prepared for in one sub-division of Lower Chindwin, Upper Burmah. The apprehension about scarcity in the Punjab, however, is said to be less, and immediate distress is confined there to two districts, while in Central India the situation is also said to be better than was anticipated, so that winter rains would greatly improve prospects. No doubt they would. We, however, sincerely trust that this optimistic-looking estimate and forecast will be justified by events. Meanwhile 3,500 persons are already employed on relief works in the United Provinces, in spite of the fact that labour is said to be still in demand and the condition of the people satisfactory. So "satisfactory" is it that the use for currency is diminishing to an extent that allows the Government to set free gold in London. Or is it merely leaning more exclusively on its paper money and silver?

A deficit is allowed for by the Prussian Government, to be added, as it were, to that in prospect for the Government of the Empire. To some extent, however, the Budget shortcoming anticipated for Prussia may be due to operations in connection with the expropriation of Polish landlords. A Bill has been introduced into the Prussian Diet asking credits to the amount of £17,500,000 to be devoted to this purpose. This is in addition to the many millions already spent, with good results, the Government says. Germans have been supplanting Poles as owners of the land, and yet Prince Bülow admitted that in the past ten years nearly 100,000 hectares more land had passed from German hands into Polish than the Germans had been able to reclaim from the Poles. Hence the demand for more effective measures. "There can be no question of abandoning the policy which has been pursued for twenty years." All the deficit of the Prussian budget, however, is not thus accounted for. The State requires money owing to increased expenditure upon its railways, because that expenditure has exceeded the amounts of the railway reserve fund available. Also the ordinary estimates are to be charged with an amount exceeding £5,000,000 a year for the purpose of granting increased pay and allowances to State officials, schoolmasters and clergymen—excellent objects doubtless, but none the less burdensome to the unprivileged taxpayer. How this money is to be raised has not yet been made known. Perhaps the bureaucrats do not themselves know.

The directors of the Southern Mahratta Railway Company, acting in conjunction with the stockholders' representatives appointed at the general meeting on the 11th inst., have come to an agreement with the Secretary of State for the continuance of the working of the line, together with portions of the railways now worked by the Madras and South Indian Companies. Under the new arrangement the capital remains at £3,500,000, the guarantee of a minimum dividend of 3½ per cent. being continued to December 31, 1937, when the Secretary of State retains power to repay the capital at par. The Secretary of State, however, is given the right up to June 30 next to call upon the company to issue fully paid up capital stock to an amount not exceeding £1,500,000 for distribution amongst the holders of Madras Railway annuities, such new stock ranking in all respects with the existing capital. Lastly, the profits of working the system are to be divided upon a basis which, taken on an average of the nett earnings of the lines included in the extended system for the years 1905-6, would give a return of about 4 per cent. per annum on the company's capital.

The Germans are deepening their hold over Chili, and will not require the help of their fleet to make them masters of its destiny before long. Owing to the withdrawal of Messrs. Pearson from the contract to build the Arica-La Paz Railway the Deutsche Bank has been given a clear field, and will finance the undertaking for, it is said, £3,000,000. This money the Deutsche Bank is to provide by-and-by on terms not disclosed, subject to the sanction of Congress. Meanwhile, the work is to be paid for as done out of the proceeds of an authorised issue of Treasury bills to the amount of £3,000,000, of which one-third has already been placed by the Messrs. Rothschild. It seems rather a pity that an enterprise of such importance should have been allowed to slip through our fingers.

The Week in Mines.

It commenced with the adjustment of the fortnightly account, which proved to be a particularly mild affair. Rates were much the same as on the last occasion, if anything a trifle lighter, and lenders were always prepared to take in shares. Money, indeed, was offered with quite remarkable liberality considering the times we live in, and the make-up being in favour of the bulls—the Stock Exchange rarely makes much on the bear tack—everybody was as happy as could be. The general charge for continuing Kaffir gold, land, and finance things was 7½-8½ per cent., and although there were a few exceptions rates were never really easy. Rand Mines were carried over at 6½-7½ per cent., as were Gold Fields, East Rands, and Johnnies. Randfonteins and Modders were borrowed on at 7-8 per cent., and in the Rhodesian assortment 5-7 per cent. was charged on Tanganyika and ½d.-1d. on Chartered, the general rate being 8-9 per cent. All the leading Diamond shares and most of the others were carried over at 6½-7½ per cent. West Africans cost 8-9 per cent., Siberians 8-10 per cent., and West Australians 7-9 per cent. as a rule, exceptions being found in the case of Great Boulders, Fingalls, and Oroya Brownhill, which were continued at 6-8 per cent. Broken Hills and the Australian Copper shares could be borrowed on at 8-9 per cent. Anacondas were arranged at 6-8 per cent., and Rio Tintos at 5-7 per cent. The various American shares were taken in at 7½-8½ per cent. Making-up prices showed some irregularity, but among Kaffirs Modders rose ½, Gold Fields 11-32, and Rand Mines and Geldenhuis Deep ¼. On the other hand, Cinderella Deep lost 5/16, Crown Reef ¼, after making allowance for the dividend, and Randfontein South ¼. Central Mining showed a fall of 5/16, and apart from De Beers, which put on ¾, Diamonds were lower. Premier Deferred was down ⅛, Roberts Victor ¾, and South African Options ½. In the West Australian list, Broomassies added no less than 4s., and among West Australians the principal movement was a drop of ⅜ in Oroyas. Ivanhoes were 3/16 lower, but Kalgurlis showed a rise of 5/16. Broken Hill things mostly went the wrong way, particularly Norths and Proprietary. Coppers were generally higher, Tintos making up 2¼ to the good, while Capes added 1¼, Tharsis ¼, and Utah ¼. Anacondas dropped ¼, and Great Cobars 7/16. Tin shares were weaker, South Croftys falling ½, and Keelungs 7-32. As to the rest, Mysore fell 5/16, New Anglo-Mexican ⅓, Alaska Treadwells ⅜, Le Roi II. 5/16, and Alaska United 3/16. Tomboys were 3/16 higher, and Talismans and Waihis each ⅜.

Kaffir Circus leaders have evidently taken the lesson of the last abortive boomlet thoroughly to heart, and seem to realise that nothing is to be gained by scrambling up prices until at least there is a fair chance of the public following. This is not likely to happen while the Bank rate stands at 7 per cent., and outsiders are sensible enough to see that speculations on 8 and 9 per cent. money can only have one result. When the air clears and the outlook is less obscure markets will probably get a run all round, in which Kaffirs will doubtless participate, and then there may be a good opportunity to reduce losses. Business was not completely at a standstill during the week, and both Paris and Berlin paid some attention to leading counters. There

was also a little buying against options, so that from one cause or another prices were pretty well maintained. Efforts to get Rand shares over 5 were not successful, and there seemed to be a good many limits at the figure, a point worth keeping in mind. A rumour current that the City and Suburban Mine was contracting was officially denied, but it is admitted that the lower levels show decreased values. The shares have been a bad market for some, and fell on the news. They should not be touched. The Geduld new issue, sanctioned about a month back, is now announced, 100,000 shares, guaranteed by Messrs. A. Goerz and Co., being offered at par, in the proportion of one new for every five held.

Except that De Beers started well and were lifted to 17⅜, Diamond shares were conspicuously flat, and we hear very unsatisfactory accounts of the condition of the diamond market. The demand for stones appears to be on the smallest possible scale, and the reduction on the De Beers dividend may be larger than some anticipate. Prices of all leading shares fell away, and De Beers, Premiers, and Jagers all finish substantially lower. Welgedachts were a poor market in the Land and Finance section, and the rest showed small irregular changes. The moderate improvement in Kaffirs helped Rhodesians for a time, and Tanganyikas were run up to 2½ bid, Chartereds reaching ⅞, and the Banket things also going higher. These prices were the best, but there was no appreciable reaction.

West Africans were inclined to improve, business and prices both showing signs of expansion, and there are faint hopes of getting a move on in this market later on, but exactly when we are not quite sure. The existence of Egyptians was still forgotten—what a fiasco this market has been—and it was only with considerable difficulty that the persistent slide in Broken Hills was checked. Block 14 were depressed by news of a surface fire, but it does not seem to have been serious. West Australians were better for choice, but Kalgurlis were not affected by the declaration of the usual 7s. 6d. dividend.

Copper shares proved to be one of the best markets of the week, owing to a quick rise in the price of the metal. Consumers were reported to be buying on a much larger scale, and speculation is also broadening. The French pool recently formed is said to have absorbed a certain amount of copper, and prices for shares were run up briskly, Tintos soon going to 68, Amalgamated to 51, Anacondas to 6 11/16, Great Cobars to 4⅝, and so on. Tin shares were irregular, the metal relapsing from a sharp opening spurt.

In the miscellaneous assortment Pekin Syndicates were driven up a bit further, while New Zealands were irregular throughout. The American things were mostly better, and the first return from the Mexico El Oro Company's own mill, which was considered good, provoked a small inquiry for the shares. Mysores were weakest in the Indian list, and Nundydroogs showed dulness. The principal Siberians did not alter, but Cobalt Townsites settled down to 15s.

MINING NEWS.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

Tati Concessions.—The annual report of this venture, made up to June 30, contains nothing of an encouraging nature, and the shareholders get further away from instead of nearer to the dividend stage. Rent of claims is less than last year, owing to the abandonment of a large number of claims previously held by the Tati Blue Jacket Syndicate, and hut rents went down because the previous year's total included some arrears. Water revenue was better, but the hotel did a small business only, and the stores showed a loss instead of a profit. In the result the Tati revenue account showed a credit balance of £2,828, interest was £3,103 and other items £67, making £5,990 in all. Directors are entitled to £1,200 for fees, but they gave up £200: how kind! and took £1,000 only. Secretary, clerks and offices required another £800, miscellaneous and insurance £535, and debenture interest £5,000, so that a deficiency was left of £1,336, reducing the credit to £4,755. A purely nominal profit, of course, owing to the presence of a Tati investment suspense account, £165,713. This consists of expenditure or advances to and investments in various properties at present not paying interest or dividends. In the circumstances there is something almost humorous in the directors remark that had the interest on the debentures held by the company in the Premier Tati Monarch Reef been taken into account as in previous years a small profit would have been shown instead of a loss. The position of the Monarch Reef Company not having altered during the year, we suppose the receiver is still in possession, and it is pretty well time the company ceased crediting interest not received, and probably never likely to be.

United Rhodesia Gold Fields.—The market quotation of about sixpence for the £1 shares of this concern is a very fair indication of its position. About the only good thing we can say about the undertaking is that the various investments, shares and debentures held in other companies, properties, mining claims, &c., are all fully set out under separate schedules, and shareholders can easily recognise how deplorable is the state of affairs. It is about as useless as anything can well be to say much regarding any of the interests, and if we just indicate their name it is almost all that is necessary. There are the Hartley mines, the Central Panbalanga Gold, the Inez Gold, the Jumbo Gold, the Mayo (Rhodesia) Development, the Revue (Mangalandi), the Rhodesia Lands, the Sumzona Development Company and "sundry shares and debentures in other companies." Such a fearful collection of rubbish we have rarely set eyes on, and the only one that seems to have the slightest chance of doing any good is the Jumbo, where operations have been carried on uninterruptedly. The Mayo Company holds shares in the Jumbo and may do a bit of good that way, but the Inez will apparently soon be ready for interment. It has been a disappointing property, the directors say, and "fully demonstrates the risks which have to be taken in mining." Delightful comfort! The loss on the conduct of the company in the year to July 31, after providing for debenture interest and £2,000 for directors' fees, which were not taken, was £9,515, and raises the deficiency on this account to £57,131. Suspense account, representing depreciation on investments, is the enormous sum of £480,856, and the fact that it remains the same as a year ago does not, we fear, mean that no further losses have occurred, but merely that no additional writing down has taken place. The company has the enormous issued capital of £660,000 besides £140,800 in debentures, and such desperate straits as it is now in can only have one end. The cash balance is the fine one of £1,838, and anything decent in the way of investment is pledged or deposited with bankers and others. A perfectly hopeless prospect as things stand at present, and you could not sell many shares even at sixpence.

Scottish Mashonaland Gold Mining.—This company performed another of its amazing profit out of loss feats during the year which ended on June 30 last, and presents its shareholders with a nice credit balance of £2,066, notwithstanding that its little bundle of investments, including loans on security having a balance-sheet value of £130,359, were depreciated to the tune of £49,195. Last year, let it be noted, the wastage of a total of £125,000 was only £23,560, so that things must have been pretty rocky in the share market during the twelve months. But should anyone be surprised at this horrible tale of losses? Certainly not. "The depreciation is due, it need hardly be said, to the abnormal depression which characterised all sections of the stock markets. There is every reason, however, to look for an improvement in conditions in the near future, and to a revival of business, particularly in those markets in which the company's funds are interested." Is there really. The directors surprise us, but for goodness' sake do not buy shares on the prospect, because we fancy something similar was said last year. Not having an expert in the art of financial legerdemain on the premises, we are unable to say how the year's profit of £2,307 on share realisations was evolved in face of the losses mentioned, but there it is on the credit side of the profit and loss account and must be all right. Then dividends, &c., produced £1,758 and transfer fees a trifle, making £4,157 in all. Of this only £650 was absorbed in directors' fees, but in addition a "call," which it would be nice to know something about, was given to a director for extra services. Sundry general outlays were also provided, and the balance of "profit" was £2,066, making with £8,331 brought in a total "credit" of £10,396. Said credit is really a debit of £38,790, but this is a Rhodesian company, and when you remember that the company's principal interests are in the Rhodesian Banket Company and the Consolidated African Copper Trust, you can just imagine how great are the prospects of recovery.

Ivanhoe South Extended Gold.—Up to the end of June last this company had managed to accumulate a debit balance of £18,945, and if operations are to be continued a large amount of additional capital must be put up. But the directors having failed to obtain the requisite support and guarantees for a scheme of reconstruction, they entered into negotiations for sale of the company's property. Someone has offered £35,000, and this has been provisionally accepted and a contract entered into. The position now is this: the proceeds of the sale should permit a return to the shareholders of 5s. per share after payment of all debts and expenses of liquidation, while if reconstruction is decided upon the assessment must be at least 8s. per share. Add the 8s. which might easily be lost to the 5s. which is certain, and the gain comes out at 13s. by accepting the offer.

Burbank's Main Lode (1904).—This company treated 12,607 tons of ore during the year to June 30 for a total yield of 8,792 ozs. which realised £29,502. Public crushing and incidental receipts gave £133, and after providing expenses at the mine £14,031 remained as profit. Excluding transfer fees, £33,

general charges, directors' fees, &c., took £1,392, and the directors decided to write off £9,704 from development account and £898 from buildings, plant and machinery, leaving £2,069. To this is added £4,188 brought forward, making £6,257, and £3,000 is devoted to the payment of a 10 per cent. dividend, the balance of £3,257 being carried into the current year. Ore reserves on June 30 were 18,000 tons, an increase on the year of 8,000 tons, and since then a further 6,000 tons has been added. Additions to the plant during the past two years have practically re-equipped the mine with new and up-to-date machinery without involving any increase in capital. The effect is seen in a corresponding decrease in the costs of mining, milling and cyaniding, which were reduced 8s. 11.52d. last year, and should be further curtailed in the future.

Mount Zeehan (Tasmania) Silver Lead Mines, Limited.—The eighteenth annual report and accounts for year ended June 30 last states that underground development has not been so satisfactory as during recent years as regards discovery of further ore reserves, but in the silver spray section prospects are extremely favourable. A main working shaft on the Balstrup section to a depth of 200 ft. is to be put down to cut a rich seam of galena located some few years ago. Mining during the year produced £64,177 or £4,500 less than last year, but interest, investments, &c., produced £1,475 more, and dividends on shares in Zeehan-Montana mine £3,762 more at £11,287, so that the total gross profit at £77,744 is close on £1,000 better. Dearer labour raised mining costs by £3,520 to £31,506, and repairs, &c., to plant, tramways, &c., were £719 higher at £4,795, but economies were effected of £400 in manager's salary and commission and salaries at mine totalling £2,200, of £355 in compensation and legal charges, £108 in miscellaneous expenses in London and £50 in directors' fees. After adding £300 to insurance reserve account as last year, allowing £950 for depreciation and writing £243 off Zeehan Queen shares, £33,108 is carried down for appropriation or just £9 more than a year ago. Considering the fluctuation in the items this difference is remarkable, and had it not been for the high price of lead current for much of the period a very much reduced profit would have been shown, as it is obvious that less ore has been produced. In the balance-sheet property still stands at £130,615. The Zeehan Montana holding is increased by the retransfer of 158 shares to 37,626, and the value is put £75 higher at £18,110. This works out at under 10s. per share, while the market value is over 25s. However, 21,000 Zeehan Queen at £425 and 5,000 Zeehan Western at £4,375, higher by the amount of call paid, £625, than last year, have no market value at present. Development stands at £18,904, having been written down £4,750, or £1,480 less than last year. 'Plant and machinery reduced by the usual 10 per cent. figures at £8,551. The only other items requiring notice here are investments which are higher by £9,875 at £38,875, and cash in hand at £874, a decrease of £5,674. The liabilities of the company are creditors £7,903, an increase of £1,914 less debtors £5,357 higher by £368, and £625 for calls on shares held. Dividends have been paid for the year of 9s. 6d. on the 20 per cent. preference shares and 1s. 6d. on the ordinary shares absorbing together £32,840, and £588 is left to be carried to next account.

Phillips River Gold and Copper Co., Limited.—This is the first report and statement of accounts submitted since the incorporation of the company in January, 1906, and covers the period from that date to June 30, 1907. During this period four groups of mines, the West Australian Government Smelter Plant and Ironstone Quarries have been acquired and the Mount Catlin mine successfully floated. The acreage owned is 477 acres, and 35 acres are under option. The railway from Hopetoun to the mines is in course of construction. In profit and loss account trading and smelting claim a profit of £75,910, and a total, including £1,585 interest, fees, &c., of £77,495 is shown. Extraction and treatment cost £10,037. General expenses in Australia £5,198 and in London £3,278, together £8,476, or over 10 per cent. of gross receipts, which seems excessive. Abandoned options are written off at £3,898, depreciation at £5,825 being 10 per cent. on development and 12½ per cent. on machinery, and a credit balance of £46,210 is carried forward. Against issued capital, £100,000, and liabilities of £24,522 stand purchase of properties £12,915, development and machinery £44,641, stocks of metal at £62 per ton, less estimated charges £14,217. Of shares in other companies at market value, £27,951, no details as to name or number are given. After realisation of matte and taking up bills payable for £12,706 since making up accounts, the liquid resources are over £37,000. Of "own ore" 2,438 tons were treated for 229 tons copper, 427 ozs. gold and 1,524 ozs. silver. This is equivalent to 9 per cent. of copper, but should not be taken as a basis for valuation of the property throughout, as the general manager reports the ore on dumps to average 5.1 per cent. copper, not much over half the value of that put through the smelter.

Nigeria Bitumen Corporation.—Formed in 1905 to develop the deposits of bitumen on its properties, this company has not so far found the enterprise a profitable one. Operations had not reached beyond the experimental stage before it was discovered that the methods of extracting the refined bitumen left much to be desired, and in order to find the best method of increasing the percentage of extraction 50 tons of crude material were sent to this country. Tests are now being carried out with this, but the directors have lost their enthusiasm for bitumen, and have turned their attention to oil, which has now become the principal object of the company. Of the original capital of £200,000 in £1 shares 125,000 shares were paid away for prospecting licences and another 10,000 went in underwriting commissions on 25,000 of the 65,000 offered for subscription. Very few shares beyond the guaranteed number were taken up, so in May, 1906, 20,000 shares were offered to provide funds for boring operations, and these were guaranteed in consideration of an option to September 1, 1907, on 19,993 shares. Only 3,400 shares were taken up under this agreement, but the option was extended to March 31, 1908, on payment of 2s. per share. This extra capital seems to have been still insufficient, and in November, 1906, the capital was increased to £300,000 to enable the company to purchase the property of the Northern Nigeria Exploration Syndicate, Limited, consisting apparently of more prospecting licences. For these £58,000 in shares was paid, and the syndicate undertook to find subscribers for another 22,000 shares on which 10s. per share has been called up. As matters stand, therefore, the company has an issued capital of £251,974, including calls paid in advance, out of which it has paid £183,000 for its licences and £10,000 for underwriting, and has spent during the period ended June 30, 1907, £27,605 on drilling plant, development and administration expenses, &c., while it still has £29,030 in cash to go on with. Out of this last item, however, the company will probably have to pay something in connection with its underwriting of 10,000 shares in the British Colonial Petroleum Corporation formed in October.

Kledang Tin Mining.—Shareholders of this concern have already received the manager's report dealing fully with the work done at the mine, and the directors' statement now issued contains little that is interesting, except that more money is required. It is said that in spite of the delays and difficulties encountered a thoroughly efficient and satisfactory plant has been installed, from which, with ordinary conditions as regards rainfall, &c., very good results are expected. Just after the completion of the plant and the commencement of returns operations were retarded by an unprecedented drought, which for the last few months has been ruling in the district. This, however, has now been followed by an excessively heavy rainfall, so that the situation appears to have greatly improved, and prospects are described as very favourable. But the company has acquired some additional ground, extra machinery was installed, and the plant exceeded estimated cost in consequence of the general rise of prices in the engineering trade. On May 31 last, when the accounts were closed, the capital account was overdrawn, a sum of £2,850 being due to bankers, and more money has been spent since, and in order to set the finances straight the directors have decided to issue the remaining 10,000 shares at 25s. each, shareholders to have the first offer in proportion to their holdings.

H. H.—There is not sufficient information available yet to enable anyone to judge of the prospects. The report, however, for the past year is about due, and you might wait for that.

O. E. A.—(1) We fear these will go down further, as the company was overweighted with promoters' profits at the commencement, and is therefore less able to stand the fall in the price of the produce. It might therefore be as well to sell. (2) This company also has little or no prospect of success, but we doubt if you will be able to find a buyer for the shares.

J. B.—Do not touch either of these at present, as the decline in prices is not yet at an end.

A. G.—Of the three institutions you name, we have at present least confidence in the last-named, but as far as we know, not one of them is in a dangerous position. At the same time, this wasting crisis cannot go on year after year without bringing trouble somewhere, and securities of the kind are only for the wealthy. No. 1 is in some ways the best of the three. (2) Yes, the depreciation seems to be discounted, and we would rather buy than sell.

G. H. B. P.—The shares are still much too dear, and we have seen the stock down at 4. It is as likely as not to go there again before all is over.

F. M.—(1) Yes, there will be rallies, but the broad tendency is downward. (2) No, a year hence we may, perhaps, begin to have some confidence in the future. (3) Yes, most of the dividends will have to be reduced, and some may be suspended. (4) Rather risky, but still offering a chance of a snap profit, perhaps. The shares are not really worth par. (5) No, not cheap at 50. (6) Better, but we should not look at them above 50. (7) These we cannot guess the value of at all, but certainly should not buy above 60.

Nomen.—(1) Partly, and also because no investor should leave large balances idle when good rates of interest can be secured on first-class stocks. (2) What we rather fear is recurring crises year after year, because all the world over savings are being anticipated by the consuming demands for credit.

E. Porter.—The first-named is a very fair purchase, as the company is not really affected by the recent crisis; the second is good, but much more speculative. (2) Begin with Clare's "Money Market Primer," an excellent introduction to the subject.

D. H. C.—The debentures are merely secured on a well advertised business, but as long as that prospers they should be

safe. For all that, we should make a change, if it can be done without much loss.

I. F. K.—(1) There seems no immediate danger, but some day the liability will cause sorrow. (2) We can send you a list if you wish. Of those in the list you refer to, there is no hurry to purchase Nos. 2 and 3 simply for market reasons. No. 1 is ex six months' dividend since we wrote. (3) The preference shares are entitled to a cumulative 5½ per cent. dividend, the debentures to 4 per cent. The latter are the prior charge, and look reasonable at present prices. On the whole, such things might be bought now. This leaves 1s. to your credit.

D. R.—Prospects do not seem very encouraging, and we think the shares at present levels are quite fully priced.

ALERTA.—Your question is a wide one, but we may say generally that we do not consider such investments perfectly safe, as we fear the guaranteeing company has gone rather beyond its depth in speculative ventures.

N.—The shares seem a fair security for rich people, who have no objection to the extremely heavy liability on them.

F. E. D.—We are very doubtful. There has been a heavy fall in the value of the produce, which may keep the market price of shares down. At best there is a considerable amount of speculation in this industry.

NEOPHYTE.—The company is a good one, and we see no advantage in selling before the money is required.

H. S. (N. W.).—(A) You might split the money between say any two of Nos. 2, 4, and 5, or No. 6 as an alternative to 5. (B) The shares seem a reasonably safe holding and you should keep them. You do not seem to have understood our rules regarding fees, which are 1s. for each security inquired about, but as we have not answered at length about any of your six we will put the whole fee at 5s.

LEO.—We are doubtful of this, in view of the present state of the exchange, and would recommend you to wait a little.

OIL.—We are inclined to think you should sell.

A. MC.—(1) The security is good of its class, and if the shares can be got at the price you name they seem a fair investment. (2) This company is one of the best of its kind, and although the present price may not leave much scope for improvement the shares should be good enough to hold.

R. J.—(1) There is no deferred ordinary stock issued by this company, but if you mean ordinary the new shares seem worth picking up. (2) Market conditions may affect this stock, but it is none the less a good investment. (3) The ordinary does not seem particularly attractive, but the debentures should be all right. In none of these, however, can we hold out hopes of an improvement in value in the near future. Prices have been driven down, so far as we know, by market conditions only, and the existing influences will naturally prevent any early recovery.

Letters to the Editor.

SIR,—It has come to the knowledge of the directors of this company that statements are being circulated to the effect that Mr. Lloyd George is justified in giving power to the new Port Commission to make competitive docks because the dock companies have demanded terms so excessive as to make the purchase of the existing docks impossible.

Will you be good enough to allow the directors to say that as regards this company there is no truth in the statement. No terms of purchase have ever been put forward by the directors, nor has Mr. Lloyd George made an offer for the consideration of the directors.

I am, Sir,
Your obedient servant,
J. G. BROODBANK,
Secretary.

London and India Docks Company,
Dock House, 109, Leadenhall Street,
London, E.C., November 26, 1907.

The liquidators of the East Argentine Railway Co., Limited (in liquidation), announce that the transfer books of the stock will be finally closed on the evening of the 30th inst., in view of the approaching payment of a dividend, and the conversion of the stock.

Messrs. J. Henry Schroder and Co. have received a cable from their Santos agents advising them that they have further encashed £20,100 in respect of the surtax collected weekly, for the service of the State of San Paulo 5 per cent. Exchequer bonds, making a total of £308,100 encashed since August 1.

The directors of the Union Assurance Society, Limited, have appointed Mr. Robert Cumming manager of the Glasgow branch of the society in succession to Mr. W. A. Tipping, who retires from that position at the end of the year. Mr. Cumming, who was formerly general manager of the Scottish County and Mercantile Insurance Company, was previously thereto connected with the State and West of Scotland, and for short periods with the Mercantile Accident and Employers of Great Britain in Glasgow, and with the Goldsmiths and General Burglary in London.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and [illegible] out of the Exchequer between April 1, 1907, and November 23, 1907

REVENUE AND OTHER RECEIPTS

—	Estimate for the year 1907-1908.	Total Receipts into the Exchequer from April 1, 1907, to Nov. 23, 1907.	Total Receipts into the Exchequer from April 1, 1906, to Nov. 24 1906.

This Prospectus has been filed with the Registrar of Joint Stock Companies.

The LIST OPENS TO-DAY (SATURDAY), the 30th NOVEMBER, 1907, and will CLOSE on or before WEDNESDAY, the 4th DECEMBER, 1907.

THE BUENOS AYRES AND PACIFIC RAILWAY COMPANY, LTD.

(Incorporated under the Companies Acts, 1862 to 1900.)

SHARE CAPITAL.

5 per cent. First Preference Stock, issued and fully paid	£1,200,000
5 per cent. Second Preference Stock, issued and fully paid	1,000,000
Ordinary Stock, issued and fully paid	6,000,000
100,000 Ordinary Shares of £10 each (present issue)	1,000,000
	£9,200,000

DEBENTURE CAPITAL.

4 per cent. First Debenture Stock, issued	£2,925,000
4½ per cent. Second Debenture Stock, issued	2,075,000
5 per cent. Debenture Stock, issued	1,250,000
4½ per cent. Consolidated Debenture Stock, issued	2,000,000
	£8,250,000

ISSUE OF 100,000 ORDINARY SHARES OF £10 EACH, AT PAR, PAYABLE AS FOLLOWS:—

10s. per Share on Application, 10s. per Share on Allotment, £2 per Share on 6th January, 1908, £2 per Share on 6th February, 1908, £2 per Share on 24th March, 1908, £2 per Share on 21st April, 1908, £1 per Share on 19th May, 1908; total, £10 per Share.

Payment in full may be made either on Allotment or on the respective instalment dates. Upon the amount so paid in advance interest at the rate of 5 per cent. per annum will be paid on 19th May, 1908.

The directors of the Buenos Ayres and Pacific Railway Company, Limited, have authorised the London Joint-Stock Bank, Limited, and Martin's Bank, Limited as Bankers of the Company, to receive applications for the above Shares, which will, at the Ordinary General Meeting to be held in 1908, be converted into Ordinary Stock, and as from 30th June, 1908, will rank *pari passu* with the existing issue of £6,000 000 Ordinary Stock, but the dividend in respect of the period ending 30th June, 1908, will be calculated on the Instalments as from their respective due dates.

The Company owns and has in operation 905 miles of broad gauge (5 ft. 6 in.) railway in the Argentine Republic extending westward from the City of Buenos Ayres to Villa Mercedes, the main line forming part of the system which is to connect the Atlantic and Pacific Seaboards of the South American Continent. In addition to the lines already opened to public traffic, concessions have been obtained from the Argentine Government for branch lines of an approximate length of 660 miles, 337 miles of the same being under construction.

For some time past the Company has worked the Bahia Blanca and North-Western Railway (563 miles now open) and the Villa Maria and Rufino Railway (141 miles). On the 1st July last the Company also took over the working of the Argentine Great Western and Argentine Transandine Railways (609 miles now open), and, by means of this arrangement, the control of the whole trans-continental line from Buenos Ayres to Valparaiso, in so far as it is situated in Argentine territory, has been secured by this Company. The Bahia Blanca and North-Western Railway has been building a line 292 miles in length to connect with this Company's system; the last section of this line was delivered to public service on the 1st October last, and this Company is, therefore, in possession of through communication with the rapidly developing Port of Bahia Blanca.

The total length of the entire system now in operation is therefore 2,215 miles.

The continued expansion of the traffic results of the system controlled and worked by the Company since 1900 is shown by the following table:—

	1900-1.	1901-2.	1902-3.	1903-4.	1904-5.	1905-6.	1906-7.
	£	£	£	£	£	£	£
Gross Receipts	600,878	584,267	718,001	959,306	1,263,636	1,618,365	2,074,591
Working Expenses	332,405	304,467	347,407	533,083	719,111	882,404	1,199,842
Net Receipts	268,473	279,800	370,594	426,223	544,525	735,96	874,749

A Dividend at the rate of 7 per cent. per annum has been paid each year on the Ordinary Capital of the Company since the year 1902-1903. The Reserve Funds at the 30th June last stood at £844,282 6s. 3d.

After including, for the purpose of comparison, the receipts of the Argentine Great Western and Transandine Railways in the figures for the corresponding period of last year, the estimated gross receipts for the 21 weeks from 1st July last to the 23rd instant show an increase of £118,224. Cabled reports of the wheat and linseed crops now being harvested are extremely satisfactory and point to a period of continued prosperity for the country generally. No damage has been done by locusts.

The increase in the traffic of this Company's Railway has rendered it necessary to acquire from time to time more Engines and Rolling Stock, widen portions of the main line, provide additional Stations and Sidings, secure adequate Terminal facilities in and around the City of Buenos Ayres, and to improve the carrying capacity of the Railway generally.

Past expenditure of Capital has been abundantly justified by results, and the proceeds of the present issue will be applied towards the cost and equipment of branch lines, terminal works, additional Locomotives and Rolling Stock, improvements and additions to the road, stations, workshops, &c., and to the general requirements of the railway.

A preference in the allotment as regards 50,000 Shares of this Issue will be given to applications from Ordinary Stockholders of the Company.

Applications on the form accompanying this Prospectus, together with the deposit of Ten shillings per share, should be forwarded to the London Joint Stock Bank, Limited, 5, Princes Street, London, E.C., or to Martin's Bank, Limited, 68, Lombard Street, London, E.C.

If no allotment is made the deposit will be returned without deduction. Should a smaller amount be allotted than is applied for, the surplus paid on application will be appropriated towards the balance due on allotment. Non-payment of any instalment upon the due date will render the amount previously paid liable to forfeiture.

Application will in due course be made to obtain a Stock Exchange quotation for this Issue.

The Articles governing the payment of Dividends provide that—

The profits of the Company of any year shall be applied first in payment of a cumulative Dividend at the rate of 5 per cent. per annum upon the First Preference Stock or Shares, and subject thereto the profits of each year shall be applied to the payment of a non-cumulative Dividend of 5 per cent. for the year on the Second Preference Stock or Shares, and the balance shall be distributable among the holders of Ordinary Stock or Shares.

Before paying any Dividend the Directors may set aside such part of the profits of any year as they think proper to a Reserve Fund, which may be applied to the payment of Dividends on the First Preference Stock or Shares, or to the renewal or repair of the Company's Railway or Rolling-Stock, or to any other purpose of the Company.

Apart from the contracts made by the Company in the ordinary course of business, the following have been entered into within the two years immediately preceding the date hereof:—

Contracts dated 24th April, 1906, and made between the Company and the Villa Maria and Rufino Railway Company, Limited. Contract dated 16th May, 1906, and made between the Company, the Bahia Blanca and North-Western Railway Company, Limited, and the South American Light and Power Company, Limited. Contract entered into on the 29th May, 1906, between the Argentine Government and the Company for the construction of lines from Bunge to Buchardo; from Chacabuco to the Alberdi branch; and from Rawson to a point near O'Higgins. Contract dated 4th December, 1906, and made between the Company and the Bahia Blanca and North-Western Railway Company, Limited. Supplemental Trust Deed dated 12th December, 1906, and made between the Company and the Trustees for the 5 Per Cent. Debenture Stock, securing £350,000 of such Stock. Contracts dated 23rd April, 1907, and made between the Company and the Argentine Great Western Railway Company, Limited. Trust deeds dated 28th May and 11th October, 1907, and made between the Company and the Trustees for securing the 4½ Per Cent. Consolidated Debenture Stock. Contract dated 30th May, 1907, and made between the Company and Messrs. Sheppards, Pelly, Price, and Pott for underwriting £1,000,000 of 4½ Per Cent. Consolidated Debenture Stock. Contract dated 16th July, 1907, and made between the Company, the Argentine Great Western Railway Company, Limited, and the Argentine Transandine Railway Company, Limited. Contract dated 11th October, 1907, and made between the Company and Messrs. Sheppards, Pelly, Price, and Pott for underwriting £1,000,000 of 4½ Per Cent. Consolidated Debenture Stock. Contract dated 28th November, 1907, and made between the Company and Messrs. Sheppards, Pelly, Price, and Pott, for underwriting the present issue of 100,000 Ordinary Shares of £10 each at a commission of ¾ Per Cent. The above Contracts may be inspected at the Offices of the Solicitors on any day while the List remains open, between the hours of 11 and 4.

In 1882, 50,000 Preferred Shares of £20 each were offered for subscription and allotted, and £20 paid on each share (subsequently converted into First Preference, Second Preference, and Ordinary Stock). In 1888, 15,000 Deferred Shares of £20 each, and £5,000 Second Preferred Shares of £20 each were allotted as fully paid, as part of the consideration for the construction of the Railway (subsequently converted into Second Preference and Ordinary Stock). The following Shares of £10 each have also been offered for subscription and allotted, and £10 paid on each Share, viz., in 1904, 125,000 Ordinary Shares; in 1905, 200,000 Ordinary Shares; in 1906, 100,000 Ordinary Shares; in 1907, 100,000 Ordinary Shares (subsequently converted into Ordinary Stock); in 1905, 23,000 Second Preference Shares (subsequently converted into Second Preference Stock); in 1906, 20,000 First Preference Shares (subsequently converted into First Preference Stock).

The Company has the right to create further Debenture Stock for £3,000,000, carrying interest at 4½ per cent. per annum and ranking in all respects *pari passu* with the £2,000,000 Consolidated Debenture Stock already issued, and a further amount at the rate of £4,000 per mile of additional line hereafter acquired by the Company or of new line for the time being constructed or in course of construction, or about to be constructed (including the extra track taken at £4,000 a mile where lines are doubled) in excess of the mileage belonging to the Company in operation on 28th May, 1907, and also for such a further amount as shall be sufficient to redeem prior issues at not exceeding the par value of the Stock for the time being redeemed, and any premium payable on redemption under the terms of the issue thereof.

A Brokerage at the rate of a Quarter per cent. will be paid by the Company on allotments made in respect of applications bearing a Broker's stamp.

Prospectuses and Forms of Application may be obtained at the Offices of the Company, Dashwood House, 9, New Broad Street, London, E.C.; of the Bankers; and of Messrs. Sheppards, Pelly, Price, and Potts, the Brokers of the Company.

Registered Offices: Dashwood House, 9, New Broad Street, London, E.C.

29th November, 1907.

The Investors' Review.

The Week's Money Market.

BANK RATE 7 PER CENT. (Raised from 5½ per cent. to 6 per cent. on Monday, November 4, and from 6 per cent. to 7 per cent. on Thursday, November 7.)

Norfolk House, Friday Evening.

At the end of last week the discount rate for three months' bank bills was close up to Bank rate; by the middle of the week it had fallen to little better than 6½ per cent., and yesterday, while the leading brokers quoted 6⅝ to 6¼ per cent. and could not get the bills, holders of the finest class of paper wanted to sell at a fraction under 6 per cent., and talked of 4 15/16 per cent. as the rate on six months' paper of the same class. A little bracing up of rates was attempted in the afternoon on the smaller supply of short credits and on reports of "Bank borrowing." The only foundation for the alleged intention of the Bank to make short credits scarce for the end of the month was the withdrawal of some few hundred thousands of Japanese money by the Bank broker in preparation for the coupon due to-morrow on Japanese 5 per cent.

The Bank has no necessity to resort to borrowing on its own account, for though the market may not be as poor as a church mouse, it is far enough from being in a position to let rates down. Bill brokers have been enticed into competition for bills at diminishing rates, not only by their unquenchable hope that the Bank rate will soon come down again, "the crisis being over," but by the action of the Japanese Government in lending its Russian millions to the middle of January at 6 per cent. Upon a sure base like that who could resist the temptation to work the discount rate down towards 6 per cent.?

Try as they may, the bill brokers cannot get rates up much above 6 per cent. They tried 6¼-⅜ per cent. yesterday and 6⅜-½ per cent. to-day for three months' remitted paper, but again sellers held out for 6 per cent., and the market was almost at a dead standstill. January bills were perhaps harder, but there was no 6½ per cent. rate, even on them. Sixes have dropped to 4⅞-5 per cent. Many people in the market look with increasing confidence for a reduction in the Bank rate in the middle of next month, but we do not at present see much chance of that.

From many points of view the position remains delicate to an unusual degree. Not only is the Bank reserve poorer by £1,828,000 than it was a year ago, but the resources of the market, as revealed in the total of other deposits, are less by £1,210,000, and the present total of these deposits is not more than a million or two above the line of market want. Nearly £5,000,000 of them, moreover, belongs to Japan. While this is so the market's debt to the Bank, principally on bills discounted and falling due daily over the remainder of the year, is £1,210,000 above last year's at this date, a fact the speculators for the fall in rates too usually overlook. Coupled with the lowness of the other deposits, this greater indebtedness warns us to expect a restricted and firm loan market from now to the end of the year. Throughout the past week seven or fourteen-day loans have been obtainable at 5¼ to 5½ per cent., and call money has fluctuated between 4 per cent. for end of the day balances and 5¼ per cent., the bulk of the business being done at 5 to 5¼ per cent.; but we expect these quotations to give place to higher ones. Call money to-day, in fact, was 5½ per cent., and some borrowers had to pay 6 per cent.

Among current illusions none could be more natural and more mistaken than this "crisis at an end" one. With us at least the crisis has hardly begun, and the same may be said of Germany. And neither in the United States nor in Canada have the full effects of recent events been experienced. The power of North America to withdraw our gold or to buy open market supplies may be nearly exhausted, or may depend now upon our capacity to give credit; but were no more gold to go across the Atlantic, we have only escaped temporarily from one source of embarrassment to encounter others. There is the Argentine demand coming on, a probable enough revival of the Egyptian demand also, and the Bank of France to pay back. Even Brazil may be able, or be compelled, to take gold from us soon.

What have we to rely upon to satisfy these and other possible enough demands? We know not any vendable gold at all in stock. The Bank of England does not now possess £32,250,000 all told; its stock is £1,000,000 below last year's at this date, and will have to be increased by at least £5,000,000 before cheap money can be restored to the market with the prospect that it will stay. To meet foreign demands and get our own depleted stock made up as well as to pay back the Bank of France, we shall require probably at least £12,000,000 of the metal between now and the end of February. Where are we to get any such amount? Not from France. The Bank of France has done some discount business for the United States, as we said last week, probably with a view to try and avert an 8 per cent. Bank rate in England, but that is no relief to us. On the contrary, upon us will probably fall the burden of meeting these bills in gold when due along with our own in gold. Not from Germany, for Germany wants gold as urgently almost as we do. Not from India, in spite of the release of £1,000,000 of the Simla Government's ill-gotten hoard this week, for were the gold portion of the Indian currency reserve to be much further depleted a credit catastrophe would be invited in the Peninsula. We can only rely on the mines and perhaps on Australia, whose banks may be forced to forward gold in lieu of produce. But from these and all other sources together can we expect a supply of £10,000,000 within the time specified? We very much doubt it, but put the total at this height, and it would not be sufficient to pay our debts and to replenish the Bank reserve sufficiently to guarantee us against a dangerous renewal of stringency in the spring. It would seem to be more prudent to keep the market firm now and back up the Bank.

About £600,000 in gold is to be offered on Monday in the open market, and it looks as if all of it available would go to New York. The price of bars has been put up again, and is now 77s. 11½d.

SILVER.

The current week's steamer was the latest by which silver could be shipped to reach Bombay in time for

the December settlement, but business there has dwindled to such small proportions that this fact made no appreciable difference to our market. Although a little of the metal was bought on Chinese account the orders were not important enough to prevent prices slipping back steadily, and by Wednesday they were down to 26½d. per oz. for cash and 26⅞d. for delivery two months forward. On Thursday, however, a rally to 26 13/16d. to 27⅛d. per oz. was brought about by a moderate amount of "bear" covering, but there was never any real strength at these levels, and to-day the market closed flat and ⅛d. lower on selling from China and the United States. The offer of Rs. 20,00,000 in drafts by the India Council again met with a very poor response, the total applications amounting to no more than Rs. 1,00,000 in bills, and for the third week in succession no allotments were made. Next Wednesday another Rs. 20,00,000 will be offered.

BANK OF ENGLAND.

The Stock Markets.

It is a pity that the Stock Exchange should be so eager to interpret every lull in the storm as meaning that "the worst is now over." A sentiment of the kind is natural enough in the present slackness of business, but wise operators will certainly not imitate the foolish in loading up to be ready for a public which will not, which cannot yet, come. Nothing is essentially changed for the better either in America or in Europe. Everywhere credit remains strained, and the only solution offered for the difficulties with which every market is encountered is more credit. That will not help us, and although we see no objection to the investment of money in high-class stocks we have a most decided feeling of antipathy to anything like gambling, to speculations for the rise. Correspondents are continually sending letters to us to ask whether this, that, or the other American railroad share might not be bought now on the chance of a rise. Those who give way to this impulse and buy before asking will lose their money. There is not a single railroad company in the American Union whose finances are likely to be free from a greater or less degree of embarrassment within the next twelve months, and many companies will not work clear of their difficulties within the next three years. Some of them, indeed, will never be free of difficulties unless a straightforward and clean system of finance is adopted. What, then, is the use of risking savings in a treacherous morass of this description?

HOME TRUSTEE SECURITIES.

In spite of the probability that money will be at least as dear this time as last for the Consols account, the stock has been rising during the week, and is now five half-crowns better than it was seven days ago. Expectations of coming cheaper money lie at the root of this advance, which is partly also the effect of "bear" closing. A few other home trustee stocks, however, have shared in the improvement, and there has been a substantial recovery also in India 3½ per cents. and in the stocks of the London County Council and Metropolitan Water Board. Amongst Municipal stocks, the one incident of the week has been the wrath excited by Bristol. Its municipality has apparently receded from the Russian-looking position it assumed in its Parliamentary notice, but the jobbers of the Stock Exchange have not yet restored the prices for its stocks to the Official list. We are not surprised, and cannot help feeling that Bristol was very ill-advised to attempt to provide for either a postpones

ment and reduction or a cessation of its sinking funds. The original notice undoubtedly pointed not only to this as the end aimed at, but implied a breach of contract in regard to the fixed date of redemption. The Stock Exchange naturally resented behaviour of this kind, and removed the prices from its list, so as to stop any dealings on the London market. We trust this disagreeable episode is not a herald of coming debt compositions among our embarrassed home municipalities.

Colonial Stocks.

Colonial stocks rallied with domestic issues, and a scattered business has gone on in the principal favourites, such as New Zealand 4 per cents. and various New South Wales issues. We cannot advise anybody to follow this lead, at any rate as regards the Australian group, because the settlements on that continent have been going ahead as if no drought were ever likely to fall upon the country again, and already another severe one is upon them. Should the absence of rain be prolonged, the last state of these colonies will be worse than the former, just because they have shown such want of prudence in the brief interval of abundance.

Foreign Government Stocks.

Among Foreign Government stocks business has centred principally in the later Russian issues and Japanese 4½ per cents., prices being higher and well maintained for both these groups of securities. In the earlier Japanese 4½ per cents. the dealings have been more extensive than for many a day, and the play in the Russian 5 per cents. of 1906 has also been extensive, but while Japanese bonds have been purchased by the investing classes the Russian movement is merely a kind of official exhibition made to further the issue of yet one more loan. The new Duma does not seem to be helping Russian credit to this further mortgage upon the people more than the ones that have gone before. German Rentes are slightly better, and the South American groups of securities have all tended to improve, although they are neglected enough. Chilian bonds, though, display a want of stamina not to be wondered at, although the "slumping" has stopped.

Home Railway Stocks.

The rise of Home Railway stocks has not gone much further, and the spurt of a fortnight ago seems to have almost exhausted the energy of the market. Still, business has been excellent these last few days in Great Central and Great Northern lower securities on the announcement that these two companies are elaborating a working agreement to affect certain portions of their systems where a cessation of rivalry can be made effective, and Great Central preferred and deferred stocks are up 3½ and 2¼, while Great Northern deferred has risen 2½ on the week. Metropolitan stock is also up 2½, and jumps of this sort are most welcome. The "heavy" stocks, however, have not been quite so elastic, and yet North-Eastern has risen 2 and North-Western 2½ on the week on buying called "good." Central London stock, too, is better, and a fair amount of business goes on in the principal ones such as Midland, North-Western, Great Western and Great Eastern. The Scotch stocks have been steady with little going on in them on our market. Great Central lower preferences have benefited by the "harmony" news, and the privileged classes of stocks, as a whole, have been steady.

Indian and Colonial Railway Stocks.

Not the slightest effect on East Indian Railway annuities has been produced by the strike which is now over, or nearly over, on that company's system. Other Indian railways have been equally listless but steady. Another furious tussle has gone on in Canadian-Pacific shares, and the "bulls" have won on the week, for the price has risen $4. One influence helping to this advance is found in the announcement that a further issue of $28,320,000 of common stock is about to be prepared for by the board of this company. As this stock will presumedly be offered at par, in the usual regardless-of-consequences fashion to existing holders, its coming issue may be regarded as a tempting bait to the "bulls." In all other respects the economic position of the Canada at the present time is wholly adverse to any upward movement. So little, however, does the average operator regard facts that not only have Canadian-Pacific shares gone up, but the preference and ordinary stocks of the Grand Trunk Company also. Business in the ordinary has been at times quite lively, and it has gained £1 on the week, causing all the preferences to rally for fellowship's sake. And poor traffic returns are ahead. Mashonaland and Rhodesia Railways debentures have sagged off, and are now once more out of the running.

United States and Foreign Railroad Shares.

Thanks to the misleading and essentially dishonest picture of American affairs presented day by day through most of the Press agencies whose communications appear in British newspapers, there has been a disposition this week to buy these shares, and the market, as we say above, has been rather eager for the play at times. Consequently the changes on the week are generally favourable, and advances of from $1½ to $3 have been attained in quite a number of instances. Union Pacific shares are even $5 up xd., but the issues of the Southern Company and Denver and Union Pacific preferred are also prominently lower on the week. The play is no doubt mainly professional and of the scalping order, but the outside public also is taking a hand in it and hence our emphatic warning. Bonds have also rallied, and some of them may be worth buying, although we think that the whole list will be lower before the day comes when we can say "the crisis is really ended."

A fair business has been transacted in the leading Argentine Railway stocks, and they, too, have shown greater steadiness, although Buenos Ayres and Pacific ordinary has been depressed a little on the new issue. Investors, however, are coming for these stocks, and with the present outlook in Argentina we are not disposed to deprecate this buying. Most of the business, however, has centred upon the three or four prominent and more trusted securities, and everywhere else in the Foreign Railway section trade has been miserably small. Some rally, however, has been brought upon in the stocks of the Mexican Railway Company, and nowhere has weakness of any pronounced description been revealed. Chilian Transandine Railway debentures are no doubt lower, but that is because of the state of Chilian finance. There has also been a decline of 8½ in the bonds of the Royal Trans-African Railway Company, but that need surprise nobody. What is astonishing is that the price of these bonds should still be where it is. Russian Railway bonds have been worked up along with other Russian stocks, and show more or less important advances on the week.

Banks, Breweries and Docks.

Bank shares have been firm as a rule throughout the week, with further improvements in Hongkong and Shanghai, National of Egypt, Standard of South Africa, Imperial Ottoman and Agricultural of Egypt shares amongst foreign issues, and with recoveries of 10s. or so in the shares like those of our own National Provincial. The shares of some of our principal Home Banks, however, have not quite followed this lead, and one or two of them are 10s. or so down on the week, but there has been, as usual, little or no selling in this group, and most prices just remain where they were. Brewery securities have, perhaps, been shifted about rather more frequently than usual, but we need only instance a further relapse in one or two Allsopp issues. American Brewery shares are also the reverse of strong. London Docks deferred stock has again occupied the attention of speculators and is 3 up, but Millwall Dock stocks have been flat. Surrey Commercial ordinary stock, on the other hand, was bought yesterday as high as 109½.

COMMERCIAL AND INDUSTRIAL.

Prominent amongst the changes in this great department has again been the weakness of debenture issues. Argyll Motors debentures, for instance, are 2½ lower on the week, our prices reflecting country prices. Then the Loch Leven debentures of the British Aluminium Company, Bovril debenture stock, Waring and Gillows debenture stock, Darracq debentures, and some others are all £1 down. The debentures of the Imperial Paper Mills of Canada Company have again receded 10, and the wide price of 25 and 35 is significant of a market's reluctance to deal at any figure. Russian Petroleum "B" debentures are 8 down, which is not surprising with wrecking afoot. The shares of motor companies continue rather wobbly, in spite of every effort to prevent any decline, but most changes are of no particular importance, seldom going beyond 5s., and there are a few improvements on the week, such as ½ in the City of London Real Property shares and in Colorado Nitrate shares.—General Hydraulic stock, however, is down 1, and Dalgety's shares are ¼ lower. The shares of some of the Manchester Warehouse companies are also weaker, and Nobel Dynamite shares have lost ½. Lipton's debenture stock is a prominent exception to rule with an advance of 2. Underground Electric Railways' profit sharing notes have not budged on the news of Messrs. Speyer's liberal action.

MISCELLANEOUS SECURITIES.

A jump of $17 is noticeable in the shares of the Canadian General Electric Company, whose board has issued a vigorous denial to the rumours in circulation about its strained financial position. In other respects the Electric list is not very comforting to look at, but Mexican Light and Power stock and bonds have risen $3 and $2 respectively, and amongst the domestic securities of this class City of London ordinary and Charing Cross City undertaking preference shares are both ¼ up. Charing Cross preference shares have also risen ⅜, and the firmness of these securities almost excites suspicion that some deed of harmony is in prospect between the rivals.

Australian Land companies' issues are now and then depressed, but they are noticeable chiefly for the absence of any sign of interest in them. Australian Agricultural ordinary stock, however, has been lifted 2. Hudson's Bay shares are 2 higher than they were a week ago, and the public still buys them in small lots in a fitful way. Canada Company's shares, on the other hand, have been put down 6, but the Financial, Land and Investment group presents a rather cheerful appearance on the whole, and there is again a noticeable jump in Pekin Syndicate shares and in the stocks of the Peruvian Corporation. The shares of the two Reversionary Interest companies are also higher on the week.

No recovery has occurred amongst Financial Trusts, which are being pressed down by popular fears of losses to be disclosed. The deferred stock of the Investment Corporation is marked down 6, for example, and American Investment Trust, Bankers' Trust, Merchants' Trust and Municipal Trust issues are 1 to 2 down in instances too numerous to be pleasant. Yet there is no active selling.

Gas stocks are still out of favour, and the appearance of the Insurance share market is uninviting. Phœnix Assurance shares as well as Indemnity Mutual and London Assurance closed ½ up, and Employers' Liability shares are ¼ better, but Ocean Accident have lost ½ and Alliance new and Royal each ¼.

Nothing very special calls for attention amongst Iron, Coal and Steel issues. They still drag in price for the most part, and Dunderland debentures are marked down another 5. United States Steel Trust shares and bonds have been vigorously lifted, and Vickers' shares as well as Pease and Partners' preference are firmer, although Vickers' preferred stock is down on the week. Fairfield 4½ per cent. debenture stock has also rallied 2 and there has been a recovery in Beardmore debentures, a rumour having been circulated that a £7,000,000 order for war ships has been secured by the company from Spain. Shipping securities have rarely altered, and the only change worth noticing is a rise of 1¼ in Union of New Zealand shares. Tea, Coffee and Rubber shares have barely maintained their prices, but Jokais are ¼ higher on the week. Anglo-American Telegraph stocks have been firm, and closed at some improvement, particularly the deferred, in which most of the business done centres. Eastern Telegraph stocks have also been in some demand, and the ordinary finishes 3 up. London General Omnibus stock is 4 higher, the most prominent change under Tramway and Omnibus securities, but all of the share and debenture issues of the B.E.T. Company are rather lower on the week.

FRIDAY EVENING.

To-day was Micawberish except in the Canadian Pacific and Russian markets. Canadian Pacific shares were pushed up to 150 on the strength of the new issue and the size of the bear position. Both the Canadian Pacific and Grand Trunk monthly statements were unexhilarating taken by themselves.

In Russian 5 per cent. bonds of 1906 a curious operation is going on. The London portion of that loan has long been much below the Paris one in price, and firms with offices in both cities have been selling their French bonds and buying the English ones, netting 5 or 6 per cent. at least by the operation. It is safe even to sell a bear of the French issue against a purchase of the London one, because there is such a lump of it borrowable. A position the reverse of this exists in Japanese New 4½ per cent., the price of the Paris portion of which is about 8 above the price of the larger London portion. But it is impossible for the French to sell bears of their Japanese bonds against purchases in London, because they would be instantly cornered on their own market for want of bonds to borrow for delivery. The restriction of marketability in this way created favours a limited class of speculators, and these alone.

Kaffir shares have been sold by Paris, but the market has absorbed the stock and seems unmoved. Home Railways look less elastic and Yankees were harder, chiefly because play had not yet been resumed by New York after its Thanksgiving feast.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS.—Rise: 2½ p.c. Ann. 1905 ½, to 80⅜-81½. Irish Land Stock Acct. ½, to 83½-84½. Natl. War Loan Stk. ½, to 97⅞-98½. Exchequer 2⅝ p.c. Bds. ½, to 96½-97½. Bank of England 3, to 263-269. India 1931 Acct. 1½, to 100-100⅝. do 1948 Acct. ⅝, to 86-86½. do. 1926 Acct. ½, to 72-73.

CORPORATION AND COUNTY STOCKS.—Rise: Metro. Water "B" Acct. ½, to 88-89. Metrop. Cons. Stk. ½, to 100½-101⅛. do. 3 p.c. ½, to 87½-88½. L.C.C. 2½ p.c. 1, to 72-74. do. 3 p.c. Acct. ½, to 86½-87½. do. 3½ p.c. and Acct. ½, to 99⅛-100½. **Fall:** Liverpool 2½ p.c. 1, to 73-75. Stockport 1, to 84-86.

COLONIAL AND PROVINCIAL GOVERNMENT SECURITIES.—Rise: Cape 1917-23 Bds. ½, to 102-103. Newfoundland 3½ p.c. 1, to 89-91. Queensland 4 p.c. Bds. 1, to 100-102. Straits Settlmts. 1, to 100-102. Critical Index to New Investments.

BUENOS AYRES AND PACIFIC RAILWAY CO., LIMITED.

As announced some time ago, this big company is issuing 100,000 new ordinary shares of £10 each, and has authorised the London Joint Stock Bank, Limited, and Martin's Bank, Limited, to receive subscriptions at par. The company owns and has in operation 905 miles of railway, extending westward from the city of Buenos Ayres, and has obtained concessions for a further 660 miles, of which 337 miles are now under construction. In addition, it has been working the Bahia Blanca and North-Western Railway and the Villa Maria and Rufino Railways, and on July 1 last took over the working of the Argentine Great Western and Argentine Transandine Railways, so that it now has control of the whole of the Argentine portion of the transcontinental line from Buenos Ayres to Valparaiso. Including the present issue, the share capital will amount to £9,200,000, while the debenture debt is £8,250,000, but the gross receipts for the twelve months ended June 30 were no less than £2,074,501, and the present year gives every promise of much larger figures still. For the past five years the dividend on the ordinary capital has been at the rate of 7 per cent. per annum, and, given continued prosperity of the country, there seems no reason why this figure should not be maintained.

MEXICAN LIGHT AND POWER CO., LIMITED.

The Bank of Montreal was authorised by Messrs. Sperling and Co., contractors for the issue, to receive applications for $2,400,000 7 per cent. gold cumulative convertible preference shares of the above undertaking at the price of 90 per cent. or £20 6s. 10d. per $100 share. The company is a Canadian one, working concessions granted by the Federal Government of the Republic of Mexico and the Municipal Government of the City of Mexico, which gives it a wide field for its operations. Under the first of these concessions a modern hydro-electric plant has been constructed at Necaxa, with a maximum capacity of 48,000 horse-power, but the demands for power have far exceeded expectations, and a second station equal to that at Necaxa is under construction. At present the company is supplying light and power in Mexico City and in various towns in the States of Hidalgo, Mexico and Michoacan, including El Oro and mining camps in the vicinity, and has connected throughout its lines a total load of about 64,000 horse-power, with contracts for 4,000 further horse-power. A comparative statement of the gross and nett earnings month by month in 1906 and 1907 shows that up to October last there has been a steady and consistent increase in

both. There should still be scope for a considerable extension of the business, and the shares may be considered a fair speculative investment.

Company Reports and Balance Sheets.

**** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

The Royal Bank of Scotland.

In its year ended October 13 last this old Scotch bank made a nett profit of £254,058, which was £11,877 more than in the preceding year. The directors accordingly give the shareholders the usual dividend of 9 per cent., half of which was paid at Midsummer, the other half being due at Christmas, and in addition a bonus of 1 per cent. for the year or the same as a year ago, making the entire distribution 10 per cent. These payments absorb altogether £200,000. Then £4,000 is written off for expenditure on bank buildings and the balance of the profit, or £50,058, is applied in writing down the value of the investments, so that the undivided profit or rest remains at £970,221. In their report the directors state that the provision made for the depreciation of the British Government and other stocks and securities held by the bank brings them down to prices at or under those of the day when the balance-sheet was made up. It must have been a satisfaction to Mr. D. R. W. Huie to see such a report presented to the shareholders within a few months of his retirement, for the fruit was his. He has for many a year been one of the best known bank managers in the northern kingdom, having been in the service of the Royal Bank for nearly fifty years. Last May he retired to take his well-earned rest, and he has been succeeded as cashier and general manager by Mr. Adam Tait, while Mr. Alexander Kemp Wright has succeeded Mr. Tait as secretary. The balance-sheet shows expansion at many points. Liabilities on deposits have risen by £903,459 to £14,569,781. Notes in circulation at £1,012,738 are also £14,380 up, and there has been an increase of £218,282 in the acceptances and endorsements of foreign bills by the bank, the total of which is now £883,442. Assets show a corresponding increase and it is satisfactory to note that the changes therein point to expansion on the commercial side of the bank's business. It holds only £16,373 more under the item, gold and silver coin, notes of other banks and cash with the Bank of England and other London bankers, but the total is £1,467,680. "Money at call and short notice in the London market, cheques, &c., payable on demand, in hand and *in transitu*" a rather confused item, is also £2,532 higher at £3,012,829, but decreases have occurred in all branches of the bank's investments. Thus, in British Government securities held the decrease is £50,348, in Indian and Colonial Government securities, Bank of England stock and British Railway debenture and Corporation stocks the decrease is £68,184, and in Foreign Government stocks, Indian Railway stocks, &c., it is £75,144. So against £50,000 written off from profits against the book value of the bank's investments there is a total decrease in the balance-sheet value of these investments of £193,676, and the total is now only £2,532,037. Are we therefore right in assuming that the directors have not only written down but sold during the past year? When we come to bills discounted, on the other hand, we find the handsome increase of £890,587, the total being now £4,698,500. Advances on cash credit and current account have also risen by £422,110 to £5,604,552, but loans on stocks and securities for short periods show a decline of £236,042 at £1,227,546. We cannot help feeling that these changes are in the right direction and wholesome. That some portion of the money of all Scotch banks must be employed in the Stock markets or in the London Money market is inevitable, but certainly for a considerable time back Stock Exchange lending has not been a desirable kind of business in which to take increased risks. The aggregate amount sunk in bank property is only £1,126 down on the year and still amounts to £621,989, London property standing as before at the by no means burdensome amount of £125,000, but something has been written off branch buildings, while a small addition has taken place in the item, property yielding rent. The aggregate of the balance-sheet is now £20,049,702, an increase of £1,141,293 on the year.

Bank of Montreal.

Good times and bad seem to make little difference to this big institution, probably because of its widespread interests, and in spite of the sudden cessation of the land boom and the poor crops the high rates obtained for money enabled it to show an increase of £37,431 at £406,878 in the nett profits for the year ended October 31. Twelve months back the directors made one of their periodical transfers of a large amount to reserve, so that the sum brought forward was reduced by £131,923 to £32,842, but as the addition to reserves is not an annual affair they are able to repeat the quarterly dividends of 2½ per cent. each and to raise the balance carried out to £143,829. The note circulation has increased by £95,435 to £2,568,606, and deposits not bearing interest are £1,068,678 up at £7,406,154, but interest-bearing deposits have dropped by £1,841,956 to £18,512,650, and the total liabilities are £568,440 smaller at £33,952,354. On the other hand, current loans and discounts in Canada and elsewhere and other debts due have risen by £729,902 to £21,651,683, with the result that there is a reduction in cash assets of no less than £1,240,806 at £12,177,383. Practically the whole decrease is in call and short loans in Great Britain and the United States, which are £1,323,908 down at £4,790,142, while a decrease of £216,602 to £887,750 in Government demand notes is more than off-set by the improvement of £307,629 in gold and silver coin, and investments and notes and cheques of other banks show advances of £111,122 and £82,467 respectively.

Bengal and North-Western Railway Co., Limited.

A very considerable increase was shown in practically all departments of this company's traffic for the half-year ended June 30, and gross earnings rose by no less than Rs. 17,10,724 to Rs. 92,26,662. Coaching traffic continues to expand at a rapid rate and 1,236,361 more third-class passengers were carried, due partly to the opening of new extensions and partly to a larger pilgrim traffic, but chiefly to general development of traffic all over the system. Small increases were shown in the other classes and receipts from this source were Rs. 5,56,767 up. Crops in Tirhut and Northern Bengal were demaged by floods and the rice and grain harvest was deficient, with the result that large imports of cheap grains were made from districts west of Lucknow, and the carriage of these over long distances helped to swell the traffic of the company to such purpose that the goods earnings improved by Rs. 11,10,842. Large increases were shown in grain and pulses, and in the various kinds of seeds, but coal fell off owing to the East Indian Railway being unable to provide for its carriage from the collieries, and sugar, wheat, and salt. Steamboats gave Rs. 67,942 more, both passenger and goods traffic being larger, but there was a falling off of Rs. 26,888 in miscellaneous receipts, due to a considerable decrease in mileage and demurrage. Working expenses absorbed an extra Rs. 7,11,444 at Rs. 37,01,935, the ratio to receipts being 40.12 per cent. against 39.79 per cent. The largest increase was in maintenance of way, owing to special outlay for renewing certain portions of the line with 50 lb. rails, and for repairs of flood damages, while the maintenance of some of the new extensions became a charge against revenue for the first time. Locomotive expenses were heavier owing to the rise in the cost of coal and to the difficulty of securing supplies. Nett revenue was Rs. 9,99,279 up at Rs. 55,24,726, of which the company's share was Rs. 29,42,237 or Rs. 6,43,873 more. This was brought home at the exchange of 1s. 4d. per rupee and with £19,409 brought forward and £4,591 from miscellaneous receipts the total available, after providing for debenture interest, preference dividends, and sundry charges, was £165,933 compared with £127,269. Out of this the directors pay a dividend at 3½ per cent. against 3 per cent. for the corresponding half of 1906 and £20,000 is transferred to suspense account, leaving £54,495 or £5,601 more to be carried forward.

Southern Punjab Railway Co., Limited.

Although there was an increase of Rs. 80,276 in passenger receipts on the main line and Kaithal branch of this company's system for the half-year ended June 30 goods traffic yielded Rs. 1,25,304 less, and with a slight decrease in miscellaneous items the gross earnings were Rs. 45,547 down at Rs. 21,95,678. Working charges being at the fixed rate of 52 per cent. show a reduction of Rs. 23,684 at Rs. 11,41,753, including adjustments, and the nett income dropped by Rs. 21,863 to Rs. 10,53,925. Brought home, this gave £70,262 against £71,719, and after providing for debenture interest and London office charges the nett balance was £59,745 compared with £60,885. The Ludhiana Extension was opened for traffic on February 10, 1906, so that the receipts for the six months go against a broken period a year ago, with the result that the nett income was Rs. 63,360 up at Rs. 1,93,070 or £13,139, making the nett revenue for the whole line £72,884. Of this the Secretary of State receives £20,963 on account of the main line and £29 from the Ludhiana balance, and the surplus belonging to the company was £12,897 larger at £51,892. Adding £55,206 or £18,443 more brought in the disposable total was £107,098 compared with £75,758 and the dividend is further raised from 5½ per cent. to 6, leaving £68,118 or £18,925 more to be carried to the new account. Capital outlay on the main line for the six months was only £306 but £16,651 was spent on the Ludhiana extension, making a total outlay to date of £1,952,969, and leaving a balance in hand of £13,050.

Bengal-Dooars Railway Co., Limited.

The earnings from general traffic for the public during the six months ended June 30 increased by Rs. 53,383, and although the special receipts for haulage of ballast trains, chiefly for the Eastern Bengal State Railway fell off by Rs. 44,144, the gross revenue from all sources was Rs. 20,081 larger at Rs. 4,70,713. At the same time a further saving of Rs. 5,334 was made in expenses, the proportion to earnings being 44.81 per cent. against 47.99, and nett earnings, less Indian income-tax, came to Rs. 2,54,942 compared with Rs. 2,28,233. Converted into sterling this gave £16,996 or £1,780 more, to which was added the considerably larger balance of £19,651 brought forward and £134 from interest, &c., making a total of £36,781 against £26,220. Of this, however, £5,006 was written off for special expenditure in restoring flood damage in 1906, and after again paying an interim dividend of 1½ per cent. on the ordinary stock the sum carried out is increased to £18,935. The directors state that the terms offered by the Secretary of State for working the line were considered as not sufficiently safeguarding the company's interests, and they have therefore decided to continue to work the line by their own agency.

North-Western of Uruguay Railway Co., Limited.

Distinct progress was made by this line in the year ended June 30, and an improvement in every class of traffic made the results the best that have been obtained since the line was

opened. Passenger traffic did not grow much so far as numbers were concerned, the increase being a mere 34, but receipts therefrom were £596 up, while an increase of 14,188 tons in goods traffic yielded £7,621 more. Revenue from all sources amounted to £55,300 compared with £44,727, while working expenses, notwithstanding the heavier cost of coal and higher wages, rose by £2,795 only to £40,306. Included in this total also was the relaying of the line, about 670 tons of new rails being used compared with 580 tons a year ago and 3,490 sleepers were put in, yet so great was the increase in receipts that the ratio of outgoings was reduced by no less than 10.09 per cent. to 72.88 per cent. Nett revenue was £7,778 larger at £14,994, but the balance brought forward was rather lower at £284 and the Government guarantee produced £263 less at £13,782, so that the total available including £10,723 from interest on the 4 per cent. Unified bonds held was £7,359 up at £30,783. Interest on the first and second debenture stocks took £20,302, income-tax absorbed £297 and £550 was written off stamp duty on the trust deed for the first debenture stock, leaving a surplus of £12,634. This was more than double the available total for the previous year and the directors are therefore able to pay 2 per cent. on the 6 per cent. first preference stock against 1 per cent. carrying forward a slightly larger balance of £373. According to the general manager prospects for the current year are undoubtedly excellent, and now that the country has a settled and progressive Government much brighter days seem to be coming in Uruguay.

URUGUAY NORTHERN RAILWAY CO., LIMITED.

A satisfactory increase in all branches of traffic was secured by this line during the twelve months ended June 30, and the gross income rose by £3,714 to £23,290. Expenses were £1,740 up at £16,731, or 71.83 per cent. of the receipts compared with 76.58 per cent. a year ago, leaving nett profits £1,974 better at £6,559. Of this two-thirds amounting to £4,373 became payable to the debenture stockholders in addition to interest at 3½ per cent. per annum, so that the total distribution is £4 9s. 5½d. per cent. or 5s. 10½d. more. With £19,006 from Government guarantee and £1,532 brought forward the total available was £27,097 against £25,602, of which the debenture interest and extra payment took £19,096, interest on prior lien debenture stock £1,472. Out of the surplus of £6,528 a dividend of 2 per cent. is again paid on the preferred stock, but this requires £250 more, and the balance carried out is therefore slightly smaller at £1,528. The dividend on the preferred stock being cumulative, the arrears now amount to £261,048, and it seems hopeless to expect that the company will ever be able to release itself from this tangle without reorganisation and possibly reconstruction.

ALGECIRAS (GIBRALTAR) RAILWAY CO., LIMITED.

The accounts of this company for the year ended June 30, 1907, are somewhat obscured by a change in the rate of exchange adopted of 28 pesetas against 32 pesetas to the £ in the previous year. At the new rate gross receipts are £74,800 against £62,254, and working expenses £65,949 against £55,024, leaving nett £8,931 against £7,229. At the old rate of 28 pesetas this increase in gross receipts of £12,625 would, apparently, not have been more than £4,800. However, adding a difference in exchange of £2,332 (£981 more than last year) and deducting interest on prior lien bonds, taxes and depreciation of stores amounting to £8,194 there remains a nett free balance of £3,068, or sufficient to turn the corner and overtake the losses of previous years with a balance over of £159 on the right side. The result is timidly described as a little more encouraging and the best yet obtained. Indeed, the result is not calculated to arouse enthusiasm when the issued capital amounts to £1,818,625 or over £15,000 per mile, allowing for the s.s. *Aline* as in balance-sheet. A claim by the Spanish Government of £4,500 for additional taxes is still pending, and is being resisted by the board. The general manager reports that the large increases in both revenue and expenditure are mainly due to the altered rate of exchange, but that increased costs are also due to certain extraordinary works which were absolutely necessary.

NEW ZEALAND LOAN AND MERCANTILE AGENCY CO., LIMITED.

In its past year ended June 30 this old and much buffeted company earned gross £339,417 and £358 was brought forward. Altogether £339,775 was thus at the credit of the revenue account, from which £145,871 was swept away by the general administration and agency expenses, or fully £10,000 more than in the preceding year. In addition to this the staff got a well-earned bonus of £4,284, and land and income taxes, British and colonial, took £859 more at £8,845. It thus followed that an increase of £18,477 in the entire gross income, including the balance brought forward, came down to an increase of only £3,246 in the nett revenue. It was still large enough, however, at £180,774 to meet the interest on the prior lien and second and third debenture stocks and to allow £58,000 to be added to the reserve accounts against £52,022 thus credited in the preceding year, with £6,562 left over, out of which a 5 per cent. dividend is again declared. When that is met the balance over will be £133. Two years ago the balance brought forward was £1,603, but as larger amounts are being put aside to reserve there is nothing in this diminution to be complained of. According to the balance-sheet the amount of the debenture stock outstanding is the same as it was a year ago, but bills payable have risen from £42,009 a year back to £210,409. Current account balances, however, due by the company have come down from £244,040 to £180,648, and the deposits due to the New Zealand Land Association have risen from £317,433 to £395,522. The reserve account now amounts to £315,022, including £100,000 set aside to capital reserve. Liabilities, including bills payable but exclusive of accrued interest, come to about £706,000 as against about £[illegible] a year back. Amongst liquid assets the company has cash £[illegible] and loans in London on short notice £180,000, the latter lent in London having risen £140,000 compared with a year back. Thus cash in all now stands at £424,433 against £[illegible] at the end of June 1906. Bills receivable amount to £[illegible] against £85,275, and advances on wool, &c., are £[illegible] at £443,098. Secured loans and advances, on the other hand, have risen from £1,029,886 to £1,228,302, and we have very much like to know how this increase has been brought about. Properties and stock belonging to the company are in each £24,000 less than a year ago at £178,507, and mortgages have gone down by about £13,000 to £149,707, while current accounts due to the company amount to the considerable sum of £585,454. Investments stand at £203,269, and the company holds debenture stock and shares in the New Zealand Land Association to an aggregate value of £552,058, the same as a year ago. It also possesses £439,969 of its own ordinary stock, which presumably represents in part the reserves. The offices, wool stores, &c., belonging to the company stand at £315,050, and help to bring the total of the balance-sheet up to £4,501,056.

NEW ZEALAND LAND ASSOCIATION.

This, it is well to remember, is a nursing subsidiary of the New Zealand Mercantile, and in its last year ended March 31 it earned £31,020 or £3,180 more than in the previous year. After meeting management expenses, which came to £3,423, and paying £14,268 as interest on its debenture stock, the board was able to transfer £8,427 to the trustees' certificates suspense account, thereby wiping it completely out. After that £4,902 was left, which the board carries forward. Of the assets £352,387 is deposited with the New Zealand Loan and Mercantile Agency Company, and bankers hold cash £1,[illegible]. Investments in the debentures of the New Zealand Loan and Mercantile Agency stand at £20,018, and the company's secured advances due on sales of land have risen by £3,411 to £88,547. Properties in New Zealand and Australia, plant, furniture, and live stock have grown by £24,248 to £173,580. There is a contingent liability of £19,850 on the partly-paid shares of the Agency Company held by this satellite Land Association, whose issued share capital is £195,900 and whose debenture debt is £356,692.

NEW ZEALAND AND AUSTRALIAN LAND CO., LIMITED.

The transfer of this old company's interests from New Zealand to Australia has so far been attended with good results, and shareholders will find little to complain of in the report and accounts for the year ended March 31 last. Thanks mainly to the inclusion of the clips from properties recently purchased, but also to delay in shearing on some of the estates, giving an extra growth, the wool clip was 5,300 bales larger at 23,068 bales, but less was sent home as scoured wool and the nett return per bale was slightly lower at £16 1s 7d. compared with £16 2s. 10d. Receipts from this source were £380,754 against £300,301, while sheep, after writing down the values of purchased sheep to the company's standard values, gave £117,009 or £20,903 more. Cattle, too, gave an extra £6,330 at £20,453, but the adverse season in New Zealand reduced the returns from grain and farm produce by £5,029 to £8,833. Including £8,152 from interest on prices of land sold, the colonial income showed an improvement of no less than £110,093 at £340,530, and although the London receipts were a few thousands down at £12,588 the total revenue, with £2,388 brought in, amounted to £100,430 more at £361,512. Expenses in the colonies absorbed £178,047 and home charges £17,487, and after meeting debenture interest and writing off £24,505 for depreciation £11,500 is transferred to a suspense account, leaving £200,302 or £65,393 more to be dealt with. Out of this the ordinary shares again receive a dividend of 7 per cent and a bonus of 5 per cent., and as there is nothing to write off for deficit on land sales compared with £25,521 provided a year ago, the directors transfer £95,000 to reserve and put another £95,000 or £3,000 less to contingency fund, carrying forward the slightly increased balance of £3,302. Outlay on freehold lands, mainly due to the purchase of the Midkin estate in New South Wales, was £233,157, but £72,332 was deducted for sales, of which £64,240 was in New Zealand and £8,080 in Australia, and £2,800 was written off for depreciation on improvements, leaving a nett increase of £158,025 at £1,610,840. Leaseholds also show an increase of £23,443 on balance at £404,170, while live stock is valued at £515,004 or £73,847 more, and against these the accumulations of all kinds now come to £570,924. Sundry creditors amount to £18,733 only, but the instalments to be paid to the Crown to complete purchase of freehold on estates in New South Wales have risen by £15,800 to £50,234. On the other hand, however, amounts due to the company for land sold come to £171,108, sundry debtors owe £38,727 and cash stands at £9,153. In addition the company possesses considerable funds derived from the sale of the Totara estate in New Zealand, which are apparently included in the total of £263,772 appearing under the head of investments. Since the closing of the accounts an estate of about 600 square miles of leasehold and 5,120 acres of freehold land, with about 85,000 sheep, in the Burke district of Queensland, has been acquired.

NORTH BRITISH AUSTRALASIAN CO., LIMITED.

The sixty-seventh annual report of this old Australian pastoral and trading company is as cheerful as the circumstances permit. A profit balance of £4,150 was shown as the

result of its working year, which ends on June 30 in Australia and September 30 in London. Pastoral news was satisfactory, and had it not been for an expenditure of unstated amount necessary to sink another artesian bore at Noorama, there would have been nothing at all of shade in the picture. Prices have been satisfactory both for stock and wool. Stock shows a good increase. The lambing season has been satisfactory and a "good clip of good quality" is looked for by the company's manager. The profit and loss account is also in a manner cheering to contemplate since the profit after meeting all charges comes out at £8,969 and allows the board to pay the interest on the debenture stock for one year with £4,159 left to be utilised in reduction of the loss by drought account. That we presume is the account appearing in the balance-sheet as decrease in value of station stocks to June 30, 1906. It amounts to £44,067. The balance-sheet, however, is a clean one in all other respects, provided the properties owned and worked are not still overvalued.

Scottish Australian Investment Co., Limited.

Weather conditions were not altogether satisfactory during the half-year ended June 30, actual drought being experienced in several parts causing losses of sheep and lambs, necessitating some hand feeding and the removal of stock from their own station to others, where pasture was available. Notwithstanding these drawbacks the company's operations resulted in very fair profits, showing a moderate increase over the corresponding period. The total was £85,082 against £77,279, and after meeting usual charges the balance of profit is £77,859. Including £5,195 brought forward, the total available is £83,054, from which debenture interest takes £6,394, leaving £76,660. Out of that the directors pay the dividend for the half-year on the 6 per cent. guaranteed preference stock and arrears for three years to June 30, 1903, on the 5 per cent. stock requiring altogether £66,000, and leaving £10,660 to be carried forward. The returns of stock show that the sheep have increased 38,454, cattle 6,907, horses 350, and goats 21, while pigs show a decline of 53. Since the half-year closed dry weather is reported to have prevailed in Queensland, and while some useful showers fell on the new South Wales station, the position in both States was far from satisfactory at the date of the last written advices, October 5. At that time rain was very badly needed, but on November 9 the manager telegraphed that good rainfalls had been experienced in parts of New South Wales. This should assist materially in improving the prospects of pastoral and agricultural affairs in that State. There are now four years' arrears on the company's 5 per cent. preference stock to be caught up, and altogether the outlook is hardly so encouraging as one could wish. Further progress in their liquidation should be possible during the current six months. The company's reserve fund disappeared when it was clearing up drought losses, but the general finances are as good as can be reasonably expected.

Natal Estates, Limited.

Although the gross income of this sugar-growing company for the year ended May 31 was £4,807 larger at £76,956 the increase did not make for its greater prosperity. Prices of sugar were lower in consequence, the directors say, of the competition of imported bounty-fed sugar, and an attempt to improve the company's position by the purchase of £6,437 worth of raw sugar for refining only made matters worse. Expenditure in Natal and London, including £750 for directors' fees, took £72,765, and £3,185 was written off for loss on live stock and refinery stores in addition to £1,648 allowed for depreciation, with the result that there was a nett loss of £642 compared with a profit of £3,744 a year ago. Only £1,532 was brought in, but a dividend must be paid somehow, and in order to make a distribution of 4 per cent. or half that for 1905-6 the all too meagre reserve is depleted by £2,500, and after deducting the above noted loss on working £390 is carried forward. This reserve fund, which is drawn upon so recklessly is, after all, only a book entry, inasmuch as it is not represented by readily realisable assets, and seeing that the company possesses no more than £159 in cash while its trading accounts just about balance, it is evident that the bank will have to be called upon for help, and the overdraft which had been reduced to £3,333 during the year will now be increased again. Against the paid-up capital of £75,000 and a loan on mortgage of £60,000 the company possesses freehold land, buildings, crops, &c., £98,941, live stock £6,931, tramway and rolling stock £5,063 and a sugar refinery valued at £25,580, but this last item it has been decided to sell to the South African Sugar Refineries, Limited, for £28,000 payable in 6 per cent. debentures of that undertaking.

Land and House Property Corporation, Limited.

A year ago the directors of this undertaking invited applications for 5,860 4½ per cent. preference shares of £5 each at par, recommending them as a thoroughly sound investment, but only 120 were placed. This reluctance on the part of the shareholders to increase their interest in the venture is easily understood when we come to examine the accounts for the year ended September 30. No explanation is given of the decrease in rents received and accrued, although these are £621 down at £36,566, and while, on the other hand, there was a small saving in rates and taxes it was counterbalanced by the extra sum spent in repairs, so that the deductions are identical. Interest receipts at the same time fell off by £68 to £1,176 making the nett revenue £17,730 compared with £18,420, of which interest charges, management expenses and depreciation allowances absorbed a few pounds more at £11,308. The disposable balance including £1,518 brought in amounted to £7,940 or £616 less, but after meeting the preference dividend the ordinary shares again get 4½ per cent., and by ignoring the reserve fund altogether £14 is added to the sum carried out raising it to £1,532. Yet the reserve after 26 years only stands at £23,842 apart from the leasehold depreciation fund of £7,772, while the freehold properties are valued at £205,351 and the leaseholds at £155,696, or together £361,047. Debentures outstanding were reduced by £1,350 to £8,000, but mortgages on properties rose by £1,742 to £166,775, and as depositors have withdrawn £6,305 of their funds, leaving the company with £11,819, the loan from the bankers has had to be increased by £7,000 to £13,000. Other creditors for interest, ground rents, &c., however, are £1,204 lower at £5,374 and against these debtors were £8,113 and cash is up to £1,871. Investments on account of the reserve fund amount to £23,652, but the securities are taken into the balance-sheet at cost, and it might be as well if shareholders inquired how far this figure agrees with the present market value.

Trust and Loan Company of Canada.

For the six months ended September 30 last this company made a nett profit of £19,732 after carrying half the profits over the amount necessary to pay a 6 per cent. dividend to the reserve fund as required by its charter. This took £4,416, but the balance brought forward was £19,732, so that altogether there was £38,971 available for distribution, and out of this an interim dividend at the rate of 6 per cent. and a bonus of 1 per cent., equal to 8 per cent. per annum, is distributed by the directors. That done £24,971 will be left to carry forward. The company appears to have £1,683,000 sunk in mortgages in Canada, including a small amount in properties bought in and held under foreclosure. It has also £167,654 invested in London, all in first-class stocks, on which it claims to have made a book profit of £113 in the six months. That unrealised sum accordingly is duly taken into the balance-sheet, which does not seem first-class bookkeeping. Expenses of directors, auditors, commissioners, &c., &c., here and in Canada look stiff at about £3,100 for the half-year, but their duties, in Canada at any rate, are no doubt arduous, especially during a time like the present when the harvest of a land boom is ripe.

James Nimmo and Co., Limited.

The directors of this coal company say that owing to several of its most important contracts for the year ended September 30 having been entered into before any considerable change in market conditions had set in, the full benefit was not secured from the increased value of coal. It must, however, either have shared largely in the prosperity, or the output has been substantially increased, as the trading profits came to £58,819 compared with £37,672, and with £164 from interest, transfer fees, &c., the total income showed an improvement of £21,158 at £58,983. Expenses rose by £3,855 to £16,596, but only £2,411 or £636 less was required for interest, and after paying directors' fees of £400 the nett balance came to £17,939 more at £39,576, to which was added £2,888 from the previous account, making a total of £42,464 against £25,388. Of this £20,000 or double last year's amount is written off for depreciation, and the directors then raise the dividend on the ordinary shares from 10s. to 15s. per share and carry forward the very much larger balance of £6,839. Good progress has been made in the development of Auchengeich Colliery, where the main coal is being rapidly opened out and an increasing daily output is now being obtained, while concurrently with this the pits are being sunk to the coking coal. Other pits at Canderside, Redford and Blackston, which had been closed down during the recent depression, have been reopened and partly refitted and the cost charged to revenue. Capital expenditure at Auchengeich in the 12 months was £26,422 and £4,834 was spent on other properties, bringing the total outlay, less depreciation to June 30, 1906, up to £318,333 or a nett increase of £21,256. The sums written off year by year are evidently regarded as sufficient provision, as the company possesses no reserves of any kind except a contingency and suspense account of £10,700, and one result of this policy is that the dependence on borrowed money is gradually growing greater. Loans have risen by £3,000 to £34,000, but other debts are down, so that current liabilities on balance show a reduction of £1,772, but are still heavy enough at £73,003, while against these debtors owe £43,746, investments are valued at £2,350 and cash and bills come to £5,066, making the free assets, with £3,548 for stocks of coal, dross, &c., £54,710 or a decrease of £5,452 compared with a year ago.

Shott's Iron Co., Limited.

This undertaking does not treat its shareholders to very much information, but profits are on a fairly satisfactory scale, and that covers many shortcomings. No profit and loss account is published, but the report tells us that including the sum brought in and after providing for depreciation, adding £3,000 to reserve, £6,000 to extraordinary reserve, and paying the interim preference dividend, there is a balance to credit of profit and loss of £32,354. Balance of preference dividend takes £2,472, and the directors recommend the distribution of 6s. per share or 30 per cent. on the "B" or ordinary shares, carrying forward £15,632. In less than a dozen lines the directors put forward a very important scheme for the re-arrangement of the rights of shareholders. At present the "A" or preference shares are entitled to a non-cumulative dividend of 4½ per cent. preferential repayment of capital, and a share in the surplus assets. They also have preponderance of voting power and the right to share in the allotment of any

new capital issue. The directors are now considering a scheme which, if carried out, would limit the preference shares to a cumulative preference dividend of 5 per cent., with preferential repayment of capital, and modify their voting rights. Shareholders will have to consider whether the additional ½ per cent. and making the dividend cumulative is sufficient inducement for giving up their other powers, very important ones let it be remembered. The company's financial position looks good.

CANADIAN OIL FIELDS, LIMITED.

Many things have been against this company in its year ended June 30 last, but principally an untoward Money market. The board wanted more capital to develop the oil-bearing portion of the Moore territory, and has been unable to get it. Want of money has also restricted the output from the wells already opened up, and the consequence is that production fell off 5,640 barrels to 21,376 barrels, so the fact that crude oil was maintained at a good price did not prevent the company from making only a small profit. After meeting debt interest there was only £1,102 left, of which £250 was written off formation account and £750 placed to depreciation and the reserve fund. This left £102 to carry forward. Nothing in the accounts calls for analysis, they merely show that the company is extremely hard up, which leads to the inference that its affairs will be worse before they are better if no capital stimulus can be applied.

ALEXANDER, FERGUSSON AND CO., LIMITED.

After providing charges of every kind this company's profit for the year to September 30 was £7,930, and £1,680 was brought forward, making £9,610. Total allowance for depreciation is £3,000, including a small loss on investments, and the preference dividend requires £3,325, so that the best the directors can manage on the ordinary shares is 3 per cent., with a considerably reduced sum of £1,290 carried forward. One good point about the enterprise is that it has no debenture debt, but its floating liabilities are fairly heavy at £27,644, and we note that a cautionary bond or mortgage for £15,000 over the works has been arranged. Balance-sheet valuation of the last-named, including goodwill, is £88,401, stocks are down for £53,447, and debtors owe £39,968 but cash is very poor. There is a reserve fund amounting to £10,000.

WRIGHT AND GREIG, LIMITED.

The seventeenth annual balance-sheet of this whisky distilling company shows gross profit of £51,640 for the year ending June 30 after writing off bad and doubtful debts, while expenses, including trade discounts and interest, were £39,893, leaving £11,749 nett, which with £1,166 brought in gives £12,915 available. After paying the preference dividend the ordinary shareholders get 4 per cent., the rate paid since 1903, when 8 per cent. was distributed. After providing debenture interest and the usual £1,000 towards debenture redemption account this leaves £1,087 to carry forward. Although sweet seventeen, the company still retains the illusion of an asset in goodwill which is lumped in with the distillery casks, &c., at £52,092. It is not stated whether the premises are freehold or leasehold, but there appears to have been a loan raised on the property as it is valued "less bonds." Stock-in-trade seems large considering the financial position of the company, and the capital. The company is owed £82,537, and against this owes £66,765. The difference, therefore, of £15,772 constitutes the liquid resources of the company, plus the small bank balance of £895. The sum of £1,102 stands in a separate item as debenture interest accrued. Not only have the directors borrowed on the security of the premises, but the reserve fund and debenture redemption fund together £22,886 are sunk in the business. Quarterly accounts due may possibly provide the funds for the dividend declared, but otherwise the sum required does not appear forthcoming. Generally the position is far from a strong one.

ASHBY'S STAINES BREWERY, LIMITED.

According to the report for the year ended September 30 the directors have acceded to the wishes of the shareholders and set out the accounts more fully, but they might have gone still further while they were about it and given more details regarding the property and goodwill account. At present this item, less £2,031 deducted for depreciation on leaseholds and the £50,000 borrowed on mortgage, stands at £581,068, the nett reduction for the year being £1,153, and it is the more imperative that shareholders should be told how much of it represents goodwill and how much leasehold, seeing that the reserve fund, with the addition now to be made, will stand at the totally inadequate figure of £12,000. Half of the loan of £10,000 shown a year ago has been paid off and the overdraft at the bank has also been reduced by £5,907 to £4,617, but, unless we are mistaken, the indebtedness has merely been transferred to the Debenture Corporation, which appears as the holder of £15,000 6 per cent. debentures. Sundry creditors are down by £620 at £13,012, but debtors, on the other hand, show a decrease of £2,395 at £9,218 and cash, apart from £4,042 in the hands of the trustees, comes to no more than £12 and the company's position is far from strong. Loss of trade through houses being closed under the Compensation Act and the continued depression in many of the localities in which the company's houses are situated are the reasons put forward for the considerable falling off in profits. These were £2,120 smaller at £30,004, but, at the same time, the company had to provide £3,650 for interest on mortgage, loan, &c., and £1,300 for the compensation fund, and after paying debenture interest and income-tax the directors found themselves with only £14,992 or £7,120 less at their disposal, so that they have to cut down the dividend on the ordinary shares from 7 per cent. to 4 per cent., and even then can only put £1,000 to reserve against £2,000 added a year ago by reducing the sum carried out to £1,289.

ANSELLS BREWERY, LIMITED.

The annual report for the year ended September 30 presented to the shareholders on November 7 states—for the accounts are evidently of purpose devoid of information—that the nett profit for the twelve months, after full provision for depreciation and bad and doubtful debts, is £79,134, which with the addition of £21,896 brought forward from last year produces £101,030. Debenture interest and interim dividends on preference and ordinary shares at the rate of 5 per cent. and 8 per cent. per annum respectively have absorbed £20,062, and the directors, after providing interest on debentures accruing to September 30, 1907, managing directors' salaries and directors' fees, now recommend the payment of a dividend at the rate of 5 per cent. per annum on the preference shares and at the rate of 12 per cent. on the ordinary shares (making 10 per cent. for the year) for the half-year ended September 30, 1907, leaving a balance of £48,979, of which it is proposed to place £20,000 to reserve, bringing this account up to £130,000 and to carry forward £28,979. Assets show "loans against security and book debts £44,797," but no information is given as to what proportion is secured. Cash, £23,455; "stocks certified by the managing director, £40,609; freehold plant, &c., &c., and sundry investments passed by the directors are entered at £895,869." The profits declared, however, appear to be satisfactory, and this is the fourth year in succession in which the ordinary shares have received 10 per cent., while the carry forward, £28,979, is nearly £3,000 more than last year's.

MARYPORT BREWERY, LIMITED.

Gross profits on trading account for the year ended September 30 were £15,587 and £4,410 came in from rents, interest and transfer fees, giving a total revenue of £19,997. After providing for all charges, including £530 for compensation fund and £311 written off for stamp duty and expenses in increase of capital, the nett surplus with £60 brought in amounted to £8,694. Preference dividend having been paid, the ordinary shares get a distribution of 10 per cent., £1,000 is written off for depreciation of plant and machinery and £2,000 is put to reserve for capital expenditure and contingencies, leaving £219 to be carried forward. In addition to a paid-up capital of £80,000, the company has issued £100,000 in debentures and has borrowed £12,570 on mortgage, while the reserve will now amount to £10,000. On the other hand, £11,386 was spent on the property during the past year, and after deducting £1,861 for depreciation and compensation awarded the outlay on capital account stands at £184,352. Only £8,558 is due to sundry creditors, against which trade debts and loans come to £20,373, stocks are valued at £10,688 and there is £1,734 in cash.

RALEIGH CYCLE CO., LIMITED.

This company makes cycles only, a launch into the motor car business not having been considered expedient, and considering the company's limited resources, this is just as well. Trading profit in the year to August 10 was £21,735, an increase of £1,152 over the preceding twelve months, and transfer fees gave £39, while the total deductions before bringing out the nett balance were £8,520, including debenture interest £2,471, depreciation £4,876, and directors' fees modest enough at £428. Sum remaining was £13,254, and £5,558 was brought in, increasing the available credit to £18,812. Of this only £2,648 is distributed in dividend, the amount giving 5 per cent, the directors thinking it well to add £10,000 to reserve and to carry forward the increased sum of £6,164. The necessity for this is the large bank overdraft, and the locking up of capital caused by the gradual payment system. Including interest, the mortgage debentures amount to £39,253, of which £24,017 is lodged with bankers for security, and sundry creditors amount to £30,057. On the other side sundry debtors owe the heavy amount of £64,204, and materials, stores, work in progress, and finished cycles are valued at £55,521. Depreciation at 2½ per cent. on the building reduces their balance-sheet figure to £58,520, and against £3,529 or 10 per cent. written off the machinery, plant, tools, &c., £5,873 was added, increasing the item from £35,288 to £37,633. The issued capital consists of £52,066 in half-crown ordinary shares and £55,889 in £1 deferred shares, the latter receiving no return.

SLATER'S, LIMITED.

It is something in these days of keen competition in the catering business for a company to maintain its earnings, and this company managed to do that and a little more during the year ended September 28. Trading and other profits were £630 up at £52,060 and interest and dividends gave an extra £100 at £4,680, but with a drop to £150 in transfer fees the gain on the total income was reduced to £770 at £57,490. Balance brought in, however, was £1,222 larger at £6,470, and as outgoings only rose by £635 to £20,443 the nett profits were £43,520 compared with £42,486, but the directors repeat the dividend at last year's reduced rate of 12½ per cent. and raise the sum carried out by £1,000 to £7,545. Property account has been increased by £4,832 to £511,053, owing to the purchase of a lease in Battersea Park-road in connection with the fish and poultry department, and against this the reserves now reach a total of £131,535 or £7,100 more. Investments in and loans to kindred companies are no longer stated separately in the balance-sheet,

but the combined item is £1,097 lower at £95,927. Liabilities to sundry creditors, although £1,837 down at £39,123, are still very much in excess of sundry debtors and stocks have been slightly reduced to £8,361. Cash too is a little down at £16,978, but the loan of £10,502 shown in the last balance-sheet has now disappeared.

British and Benington's Tea Trading Association, Limited.

The remarkable rise in tea prices had a bad effect on this company's business for the year ended September 30 and trading profits, including interest and transfer fees, fell off by £1,119 to £13,175. On the other hand, a saving of £422 was effected in management expenses, &c., and with £236 brought forward the nett decrease was no more than £609 at £8,927. This reduction, however, was sufficient to prevent the directors from repeating last year's effort to build up the reserve, and as they seem to be in some doubt as to the outlook they have decided to cut down the dividend on the ordinary shares from 6 per cent. to 5 in order to carry out the considerably larger sum of £1,141. Goodwill, trade marks, and names stand at £89,599, or considerably more than the ordinary share capital, and against this the reserve now amounts to £21,005, of which £13,450 is invested in the company's own preference and ordinary shares and £7,632 is in various railway stocks and shares, presumably taken at cost. Trading balances are very largely in the company's favour and stocks are £1,730 up at £14,934, but cash has dropped by £2,302 to £3,935.

J. Hepworth and Son, Limited.

During the year ended September 30 last this company earned the fairly satisfactory profit of £32,235, from which directors' fees took £1,250, leaving £30,985 nett. Sum brought in was £2,390, making £33,375, and the preference dividend for the twelve months absorbs £5,700. On the ordinary shares the directors propose to make a distribution of 8 per cent., requiring £19,760, adding £5,000 to reserve, and carrying forward the larger amount of £2,915. The profit is somewhat less than in the previous year, owing largely to adverse market and weather conditions, but the directors say that the basis of the business has been steadily broadened by the addition of new branches, bringing the total up to 157 shops in the United Kingdom. The undertaking is a pretty big one, and although there was a reduction in the property account during the year of £15,805 on account of the sale of a freehold its total is still substantial at £312,987. Reserve now amounts to £73,000, a good sum, but all in the business. Floating liabilities amount to £77,771, but debtors are no more than £2,402, and the cash balance of £178 is much too slender. Stocks account for a very big sum, no less than £174,791 in fact, and the plant, fittings, &c., amount to £41,218.

TRADE AND PRODUCE.

Wheat.—Supplies of home-grown wheat this week were about the same as last, farmers having delivered 67,444 qrs., but the average price is again a little lower, being 34s. 7d. The price in the market keeps steady, and here and there a little more business is done, as millers seem more inclined to buy. Spot parcels for foreign wheats are also firmly held, occasionally at from 6d. to 1s. advance, Manitoba selling at 44s. 6d. to 45s., but American winters had occasionally to go for a little less money. Shipments from abroad show a slight decrease, and so far our supplies are not beyond requirements. This week 508,247 qrs. were imported, against 406,747 in the same week last year, and Dornbusch estimates the quantities of wheat and flour on passage at 2,065,000 qrs. to the United Kingdom and 1,270,000 qrs. to the Continent, against 2,075,000 and 1,405,000 qrs. respectively last week. American markets have rallied considerably this week. Export demand has been good, crop news unfavourable, sending prices from 1c. to 2.5-8c. higher.

Wool.—The opening of the London sales showed a considerable depreciation in values, superior merinos being from 5 to 7½ per cent. cheaper than at the closing of the previous sales, while in faulty descriptions the decline was fully 10 per cent., and in crossbreds from 7½ to 10 per cent. But at these lower rates buying was good and competition keen, and the easier rates have helped to restore confidence in the country markets. Business in them is still on a small scale, and speculative operations absent, but buyers are taking more freely for their present requirements, and that is about as much as can be expected of them in the present financial position. The shipping trade of Leeds and Huddersfield shows a good deal of activity, large quantities of both cheap and fine goods are being sent to South America, and a fair business for fine cloths is being maintained with the Continent.

Cotton (from our Manchester correspondent).—Our market during the past week has been generally quiet, and although the tone has been somewhat steadier, no particular increase can be recorded in the turnover in yarn and cloth. Sellers meet with many difficulties in arranging transactions, and after considerable negotiations their efforts often fail, owing to small differences between price and offer. The American crop is still making rather poor progress, and the forward movement is disappointing. Estimates now centre round about 11,750,000 bales. No fresh news of importance has come through, and the outlook is uncertain. Values have rather tended to harden, but this has not stimulated buyers of yarn and cloth to greater activity. A rather better inquiry from India has come through for piece goods, Calcutta buyers being rather more in the mood to enter the market. Few sales of weight have occurred, however. Makers of shirtings in the commoner qualities are prepared to accept very low rates, and can give quite early delivery. Rather more bids have been made for China, but the business put through has not been important. Various minor markets have given a little support in goods of a miscellaneous character. Home trade demand does not improve very much, and makers of goods suitable for home consumption complain of the small amount of new business coming round. Many manufacturers press for fresh orders, and, owing to the want of work to go on with, more looms are being stopped. The short time movement is spreading, and in addition to Burnley, machinery is standing idle in the Rossendale district. In American yarns for home use a quiet business has transpired, and in certain directions rather more irregularity is beginning to show itself in quotations. Spinners all round are losing ground, as advances cannot be obtained to meet the higher rate in the raw material. Export business has been quite unimportant. Spinners find difficulty in getting buyers to state particulars against old contracts. Bolton yarns are not so strong as a little time ago. Small sales have transpired, but producers when tested are rather easier.

American cotton, says Sir Jacob Behrens and Sons' report, has advanced during the week through the action of speculators, who evidently think there is every probability of higher prices in the immediate future. Smaller crop estimates are gaining favour, and the average of a large number of estimates is rather below 12,000,000 bales. The south is not offering freely, so that, in spite of reduced consumption in America, prices continue on a high level. Egyptian cotton continues dull, with prices rather in buyers' favour.

Coal.—Shipments to the Baltic ports are lessening, and the export trade from the North of England also shows signs of falling off, but Welsh trade shows signs, on the other hand, of increasing business, Newport, Cardiff, and Swansea all sending large shipments abroad. Prices under such a strong market are naturally advancing, steams and anthracite alike participating in the improvement. Scotch trade also shows a brisk export business, and a fair amount doing in manufacturing qualities for home consumption. In these also the English demand shows no slackening, and the requirements of railways, fishing fleets, &c., will absorb all the output left from export. Coke is again lower about 1s. per ton, in sympathy with the fall in pig-iron quotations and depressed trade.

Copper.—The market has suffered one or two slight reactions during the week, but the general movement has been upward. Speculative support has been good, and bears have covered freely as a rule, though yesterday their pressure forced values down a little, and with a further relapse to-day closing quotations were back to £62 15s. for cash and £63 2s. 6d. for three months.

Tin.—Eastern business was again reported higher at £142 5s. c.i.f., but it did not strengthen the market here, and under increasing offers and small business values gave way. Then, in contrary fashion, when cables from the East showed a decline, this market went up, following the improvement in copper, and advanced to £139 12s. 6d. for three months. The improvement did not last, however, and prices went steadily back to £134 10s. for spot, and £136 5s. for three months.

Iron and Steel.—The output of hematite has been considerably reduced, and even so is proving too much for consumers' requirements. The contracts on hand are nearly run out and few new ones are coming in to replace them, and it is significant that the forward business that is done is at lower prices even than present ones, showing that the trade realises that values will drop still further before a reaction sets in. West Coast hematites are now at 69s., and for East Coast this is considered too dear, though makers are quoting 70s. or 69s. 6d. Cleveland pig-iron makers are still fairly well off for orders, and production so far not more than necessary, the continued withdrawal from Connal's stores, in fact, showing that more could be disposed of if it were forthcoming. In spite of the present slackness of trade, the production this year of pig-iron in the North-East of England has been well beyond the highest figure recorded, and even so 442,000 tons have had to be taken out of public stores to satisfy requirements. But the immediate outlook is not very promising all the same. Warrant prices for three months ahead are from 1s. to 2s. below prompt, and are likely to remain depressed for a longer time than that unless foreign as well as home trade takes a surprising turn for the better sooner than is expected.

Tea.—Foreign and colonial markets have made remarkable progress during the last two years, for, according to Messrs. Gow, Wilson, and Stanton, the first nine months of this year show an increase in imports of nearly 12 million pounds of Indian and Ceylon tea, compared with the same period of 1906, and as much as 28 millions more than in the first nine months of 1905—an increase still more satisfactory, considering the much higher prices that have ruled these last few months. Sales are now restricted as much as possible, buyers not being likely to increase their stocks till the turn of the year. 27,994 packages of Indian were offered, and for all teas up to 8d. per lb. bidding was good, with an advance of nearly ¼d. frequently given. Higher grades were occasionally a little irregular, and bidding not so keen, the average on a total of 25,929 packages sold coming to 8.40d., against 8.07d. a year ago. Ceylon importers offered only 14,612, and here also grades up to 8d. sold well at about ¼d. advance, teas above these prices selling well, but at unchanged quotations, the average for the week coming to 8.58d., against 8.67d. in 1906. Java auctions comprised 2,084 packages, and these passed with a strong tone, scarcely any tea being sold under 7½d.

SUGAR.—Mr. Czarnikow reports that the market has remained quiet and inactive during the week, with quotations for foreign refined 1½d. lower, but prices for raw maintained, May beet having only moved from 9s. 8d. to 9s. 7½d. to 9s. 8d. This steadiness, in face of financial troubles and failures, small exports, re-opening of navigation, and delays in the Brussels Convention negotiations, speaks well for the stability of the market. Holders, says Mr. Czarnikow, are strengthened by continued indifferent reports about the German and French crop, and also by advices from Cuba that there is still drought in the Western districts, and that the cane available will probably be only sufficient for 1,100 to 1,200 thousand tons. Of course, planters require money, which at present is scarce, and America has a larger Louisiana crop to dispose of, so that little support can come from that side for a while, but a shortage of 250,000 tons in Cuba, crop failure in India, and a very short crop in Mauritius, may create requirements to off-set the surplus in Russia, which is so much feared, though not available before next autumn. The future should, therefore, be largely governed by the cost of production, and this, according to present calculations, will certainly be much more than last season. Continental countries seem inclined to continue the Convention, and the question as to terms lies between Germany and Russia, regarding the quantity to be exported from the latter country. In any case, a return to the old bounty system is nowhere contemplated, least of all in Germany, where fresh taxation is required to cover the existing deficiency in the Exchequer; opinions, too, in United Kingdom are undergoing changes as to the question of tariffs and bounty-fed imports. American markets are still under the influence of the financial crisis, and with dull reports from this side, and full supplies of domestic sugar buyers are discouraged from operating beyond present requirements, and the small transactions which have taken place show a further decline to 3.07 cents. for 96 per cent. Centrifugals. Landings in the three ports for the week came to 12,000, meltings to 33,000 tons, and stocks are reduced to 155,000 tons.

MINING RETURNS.

Brilliant and St. George.—Crushed 732 tons, 290 ozs.

Brilliant Gold.—Crushed 435 tons; value, £1,200.

Briseis Tin.—Shipped 14 tons, including 7 tons on behalf of New Brothers Home No. 1.

British Broken Hill.—2,531 tons crude ore produced 434 tons concentrates, containing 269 tons lead and 11,284 ozs. silver.

Chinese Engineering.—Output, 27,000 tons; sales, 20,000 tons; consumption, 1,600 tons.

Cobalt Townsite.—Shipped to smelter 21 tons.

Duff Development.—Prospecting dredge, 55 ozs.; No. 1, 18 ozs.; No. 3, 28 ozs.

Eaglehawk.—Crushed 1,100 tons, 206 ozs.; from cyanide, 123 ozs.

Hyderabad (Deccan).—Output of coal 35,404 tons.

Kluchi Gold Mines.—Crushed 730 tons, 198 ozs; 684 tons of tailings stored, worth 34s. per ton.

Mexico Mines of El Oro.—Crushed 5,304 tons ore, value U.S $48,533; value of 25 tons of ore shipped to smelters, $13,110.

Mount Molloy.—Smelted 904 tons own ore and 58 tons purchase ore, producing 61 tons blister copper.

North Broken Hill.—Treated 2,480 tons crude ore, producing 420 tons concentrates, containing 289 tons 12 cwt. lead, and 7,896 ozs. silver.

"O.K." Copper.—Treated 587 tons of crude ore for 52 tons fine copper.

Orsk Goldfields.—Total output, 536 ozs.; value, £1,981.

Palmarejo and Mexican.—Zapote: Crushed 3,284 tons, treated 2,700 tons, producing $48,790.

Phillips River Gold.—Shipped 59 tons copper matte.

Stratton's Independence.—254 tons shipping ore, averaging 1 oz. 16 9-10 dwt.

Sulphide.—15,541 tons ore milled, producing 2,736 tons leady concentrates; also 25,938 tons tailings treated, producing 8,799 tons zinc concentrates, and 40 tons leady concentrates. 2,098 tons leady concentrates, 223 tons residues, and 5,418 tons purchased ores smelted, yielding 2,530 tons lead, containing 235,290 ozs. silver, and 6,451 ozs. gold. Also treated 275 tons zinc concentrates, producing 66 tons spelter.

Tasmanian Copper.—Shipments of ore, 1,148 tons.

Whim Well Copper.—277 tons copper ore, sold for £3,439.

DIVIDENDS ANNOUNCED.

RAILWAY.

Barsi Light.—Final at the rate of 3½ per cent., making 6 per cent. to June 30, carrying forward £4,622.

BANKS.

Bank of New South Wales.—On the capital stock at the rate of 10 per cent. per annum for half-year ended Sept. 30, placing £30,000 to reserve, and carrying £31,645 forward.

Royal of Australia.—At the rate of 7 per cent. per annum, placing £5,000 to reserve, and carrying forward £4,941.

MINES.

Brilliant Central.—6d. per share, payable Dec. 17.

Durban-Roodepoort.—Interim on account of year ending Dec. 31 of 2s. per share, payable Dec. 31.

Cape Copper.—14s. per share on the cumulative preference and ordinary shares, payable Jan. 1.

Kalgurli Gold.—Interim 7s. 6d. per share, payable Jan. 6.

Talisman Consolidated.—Interim at the rate of 1s. per share, payable Dec. 21.

Tilt Cove Copper.—Interim of 2s. 9d. per share.

MISCELLANEOUS.

Army and Navy Auxiliary Co-operative Supply.—Interim of 2s. 6d. per share.

Assam Company.—Interim of 3½ per cent. per share, payable Jan. 1.

Bristol Wagon and Carriage.—Interim of 4 per cent.

Cachar and Dooars Tea.—Interim of 2 per cent. on the ordinary shares.

Calgary and Edmonton Land.—Fourth interim for 1907 of 2s. 6d. per share.

Canadian General Electric.—Usual quarterly of 2½ per cent., payable Jan. 1.

D. Jones Dickinson and Co.—Further of 2½ per cent., making 5 per cent. for year ended Sept. 30, carrying forward £770.

Doom Dooma Tea.—Interim of 5 per cent. on account of 1907.

Dumont Coffee.—3¼ per cent. on account of arrears on the preference shares.

"E. C." Powder.—Interim of 1s. per share for half-year to Sept. 30.

Eastman Kodak of New Jersey.—In addition to usual quarterly dividends payable Jan. 1, an extra of 5 per cent. upon common stock, payable on Feb. 1.

Edward and John Burke.—Interim for half-year ended Oct. 31, 1907, at the rate of 7 per cent. per annum on the ordinary shares.

George Trollope and Sons and Colls and Sons.—Interim of 2½ per cent.

Imperial Accident Insurance.—Interim for half-year ended June 30 last at the rate of 7½ per cent. per annum.

J. W. Green.—Usual of 10 per cent. for year ended Sept. 30, placing £5,000 to reserve.

John Brown and Co.—Interim at the rate of 5 per cent. per annum on the ordinary shares.

John Lovibond and Sons.—Interim on the ordinary shares at the rate of 7½ per cent. per annum for six months ended Sept. 30.

London General Investment Trust.—At the rate of 6 per cent. per annum on the deferred stock for quarter ended Sept. 30.

Mackay Companies.—Quarterly of 1 per cent. on the common shares.

Malta and Mediterranean Gas.—Interim of 2 per cent. on account of year ended March 31.

Pyman Steamship.—Interim at the rate of 5 per cent. per annum for half-year to Nov., 1907.

Starkey, Knight and Ford.—Balance of 6 per cent. and a bonus of 5 per cent., making 15 per cent. for year ended Sept. 30, placing £3,000 to reserve, carrying £1,565 forward.

Stewart and Wight.—Interim on the preference shares for six months ended June 30 at the rate of 6 per cent. per annum.

Vu can Foundry.—Interim bonus of 10 per cent. on the ordinary shares.

Weardale Lead.—Interim of 1s. per share.

Western Telegraph.—First quarterly interim of 3s. per share for year ending June 10, 1908, being at the rate of 6 per cent. per annum.

Wm. Fison and Co.—At the rate of 6 per cent. per annum on ordinary shares, carrying £1,000 forward.

NEXT WEEK'S MEETINGS.

MONDAY, DECEMBER 2.

Charterland Gold Fields.—Cannon Street Hotel, 12.30 p.m.
Clark's Consolidated.—Winchester House, noon.
Ivanhoe South Extended.—Salisbury House, 11.30 p.m.
Kaffirs Consolidated.—Cannon Street Hotel, noon.
Morgan's Brewery.—Norwich, noon.
Scottish Mashonaland Gold Mining.—Salisbury House, noon.
Slaters.—Hotel Cecil, noon.
Southern Mahratta Railway.—46, Queen Anne's Gate, S.W.

TUESDAY, DECEMBER 3.

Anglo-California Oil.—Winchester House, 2.30 p.m.
Carter's Knottingley Brewery.—Sheffield, 2.30 p.m.
Civil Service Supply.—Cannon Street House, 6 p.m.
Ilford, Limited.—Winchester House, noon.
Tati Concessions.—Winchester House, noon.
Weldless Steel Tube.—Birmingham, 3 p.m.

WEDNESDAY, DECEMBER 4.

Associated Tamworth Mines.—Winchester House, 12.30 p.m.
Inverell Diamond Fields.—Winchester House, 11 a.m.
New Zealand Crown Mines.—11, Cornhill, E.C., 11.30 a.m.
Nigeria Bitumen.—Winchester House, noon.
St Pauli Breweries.—9, New Zealand Avenue, E.C., noon.

THURSDAY, DECEMBER 5.

Alcoy and Gandia Railway.—Dashwood House, E.C., 3 p.m.
Arniston Coal.—Edinburgh, 3.30 p.m.
Balkis, Limited.—Winchester House, noon.
Henderson Transvaal Estates.—Cannon Street Hotel, 2 p.m.
J. and P. Coats.—Glasgow, noon.
London Scottish American Trust.—Cannon Street Hotel, noon.
Mordey, Carney and Co.—Cardiff, 3 p.m.
New Zealand Loan and Mercantile Agency.—1, Coleman Street, E.C., 2 p.m.
St. John del Rey Mining.—Cannon Street Hotel, 2 p.m.
South Australian Land Mortgage and Agency.—River Plate House, noon.

FRIDAY, DECEMBER 6.

Cuban Land and Development.—Winchester House, noon.
Leeds and Wakefield Breweries.—Leeds, 11.30 a.m.
Nobel Dynamite Trust.—Winchester House, 1 p.m.

Mr. William Weddel, of the firm of Messrs. William Weddel and Company, has been appointed a member of the board of directors of the London and India Docks Company, in place of Mr. John James Hamilton, deceased.

COMPANY MEETINGS.

PHŒNIX ASSURANCE COMPANY.

An extraordinary general meeting of the Phœnix Assurance Company, Limited, was held on Wednesday, at the chief office, 19, Lombard Street, London, E.C., to consider resolutions with regard to alterations in the objects and regulations of the company. Mr. Bristow Bovill occupied the chair.

The Manager and Secretary (Mr. H. B. Guernsey) read the notice convening the meeting.

The Chairman said: Gentlemen,—It may not be out of place if I commence my observations to-day by expressing the regret of our board that we should have found it necessary to trouble the members with such a mass of printed matter in connection with this meeting. But we have to act strictly in accordance with legal opinion, and it is, of course, our desire to place our proposals fully before our fellow shareholders; and between these considerations we find it difficult to be brief. The object of our meeting may, however, be shortly stated. First, we desire to amend our constitution and regulations so as to be able to undertake the business of the Pelican and British Empire Life Office, our fusion with which company has, I am happy to inform you, received the sanction of the High Court; and, next, we wish to take the opportunity of adding to our powers so as to be fully qualified to transact every class of insurance and contingency business. I need not tell you how insurance business tends from time to time to take a new development or follow new channels. This is, indeed, a well-marked feature of the times, and the experience of all the large composite companies shows how necessary it is to be fully armed with the widest powers in order that any new classes of business, either profitable in themselves or necessary for the protection of our other interests, may be covered by our constitution without the need of calling together our members to sanction every small extension which seems desirable. We, therefore, ask you to-day to give your sanction to the new constitution and regulations, which have been prepared with the greatest care by our solicitors and settled by eminent counsel, as being in accordance with precedent and the requirements of our business. Passing now to the specific resolutions to be submitted to-day, I should inform you that the new constitution gives us power to perform the duties of trustees and executors, a branch of business now commonly undertaken by the largest offices, and includes the wide powers as to all special and contingency business which the Pelican and British Empire Life Office is authorised to transact. We have, indeed, added their powers to our own, as having been carefully drawn up so as to include all legitimate forms of general business. Among the new regulations the alterations are not very important, being more or less what lawyers recognise as "common form," and I may mention that they have been submitted to the committee of the Stock Exchange for approval, which is in itself a guarantee to you that they contain nothing unusual or improper. I must, however, call your attention specially to clause 72, dealing with the remuneration of the directors. The amount of the directors' fees is fixed by the regulations which you are asked to approve at a maximum of £9,000, and though this may seem a large sum at first sight, it is less than the aggregate amount at present received by the boards of the Phœnix and the Pelican, and it will be further noted that a reduction will take place in the total sum to the extent of £300 for each vacancy out of the 25 directors thus provided for. We cannot say exactly how many directors there will be upon the board of the combined company to start with, as members of the Pelican board have the option of joining the board or retiring on compensation, as provided for in the transfer agreement. But we sincerely trust that the Pelican directors of both sections—that is, both original Pelican directors and British Empire directors—will, unless special reasons exist to the contrary, come over and help to advance the interests of the company in all the branches of its business; and they will one and all be assured of our hearty welcome and cordial and loyal support at all times. I think I have now completed all that is necessary to lay before you in regard to matters of detail. But just before closing, I beg to be allowed to ask you most sincerely to give your warm approval to the resolutions as an indication that you are determined to support, to the utmost of your capacity, the amalgamation of which this meeting is, perhaps, the chief concluding step. I believe that the operation which has been carried through with unqualified zeal and loyalty on both sides is the most important action the Phœnix has taken since its foundation 125 years ago. By this we become entitled to a place among the foremost insurance companies of the kingdom, appealing for the support of the public with claims at least as great as those of our principal competitors. By the hearty goodwill and co-operation of our widespread connections, new and old, we hope to achieve a measure of success in future which will prove how advantageous to all interests is the amalgamation you are asked to advance to a final stage to-day. Perhaps I may remind you that, as I said at our July meeting, Mr. Ryan, of the Pelican and British Empire Company, will be the general manager of the company, and Mr. Guernsey, whom you all know, will remain as our fire manager. I now, gentlemen, beg to move the resolutions which Mr. Guernsey read before I began my address, viz.:—(1) That pursuant to the Companies (Memorandum of Association) Act, 1890, the objects of the company be altered by substituting for the objects set forth in the fundamental laws of the company contained in the first schedule to the Phœnix Assurance Company's Act, 1895, the objects set forth in the document intituled "Constitution of the Phœnix Assurance Company, Limited," submitted to this meeting, and for the purpose of identification, signed by the chairman of this meeting, and that the directors be and they are hereby authorised to apply to the Court to confirm this resolution under the said Act. (2) That the regulations contained in the printed document intituled "Regulations of the Phœnix Assurance Company, Limited," submitted to this meeting, and for the purpose of identification signed by the chairman thereof, be and the same are hereby approved, and that such regulations be and they are hereby adopted as the regulations of the company to the exclusion of and in substitution for all the existing regulations thereof, including all the regulations made in pursuance of and subsequently to the Phœnix Assurance Company's Act, 1895.

Mr. Walter Bird: Gentlemen, I have very great pleasure in seconding the resolutions which our chairman has proposed to you. Being a member of the committee that has most carefully gone through all the details of the new constitution and laws which you have all received in pamphlet form, and which I hope, as I feel sure, you have all read, I consider I can most confidently and cordially recommend these resolutions for your acceptance. Our chairman has gone exhaustively into the scope and objects of these resolutions, and, therefore, I have nothing to say, except to echo his remarks. The legal points that arose during our committee meetings have been all settled by eminent counsel, and there is nothing in these resolutions, or in the constitution and laws, that is not framed in accordance with the advice of legal authorities, and, as we believe, in the best interests of the amalgamated company. I have only to echo and to endorse the hope which the chairman has expressed that if you pass these resolutions the future success of the amalgamated company will not only be widespread, but conduce to the best interests of the proprietors of the Phœnix and Pelican companies. I have much pleasure in seconding the resolutions.

Mr. John Coles said that he did not think the shareholders should sit in absolute silence on that occasion. The empty seats which he saw testified to the confidence which the shareholders felt in the administration of the company's affairs by the directors, and in their carrying through of this excellent proposal. (Hear, hear.) The chairman had placed it before them in a clear and appropriate manner, and they had been able to follow them easily. He thought that those who were old shareholders—he had been a shareholder, he believed, over 30 years—rejoiced that the Phœnix was spreading its wings and taking a wider flight. It had a splendid history to look back upon, and he believed it would have an equally good and pleasant record in the future. Anyway, the two companies would form a powerful combination, and, under the able management of Mr. Ryan and Mr. Guernsey, he felt sure that success would attend its efforts. They were all aware that the millions which Mr. Ryan would bring to them could not be touched by this company, as that money constituted a reserve for special purposes for life policyholders. Still, they might rejoice somewhat in its sunshine, and they would no doubt enjoy the benefit of the confidence which those large figures would give the public in the company. The result would be, no doubt, to bring them a larger and a better business in the future, of which they would all reap the advantage.

The resolutions were then carried unanimously.

The Chairman: I beg to thank you, Mr. Coles, for the kind remarks you have made with regard to this company, both as to its past history and as to its future prospects. I confidently say that we look forward to greater prosperity in the future than we have enjoyed in the past. (Hear, hear.)

Mr. Beedell said he had much pleasure in asking all present to join him in giving a hearty vote of thanks to the directors for the able manner in which they had conducted the company's business, and to the chairman for presiding on that occasion. (Hear, hear.)

Mr. Hunter seconded the proposition, and it was agreed to unanimously.

The Chairman: On behalf of my colleagues and myself, and also of the staff, I beg to thank you, gentlemen, for the kind manner in which you have received this motion. I should like to add that the resolutions will be submitted for confirmation as special resolutions at an extraordinary general meeting to be held at noon on Thursday, December 12, next. The usual notices will be sent to the shareholders. We hope we shall see some of you here at that meeting to confirm these resolutions, and then things will go ahead rapidly, and we shall from that time be able to look forward to making this amalgamated company a tremendous success.

Mr. Guernsey next read the notice convening the extraordinary general meeting to increase the capital of the company.

The Chairman said: Gentlemen, the sole object of the resolution I have now to ask you to pass is to authorise the increase in our capital by the creation of 14,286 shares of £5 each, fully paid, for the purchase of the business of the Pelican and British Empire Life Office. These shares will all be offered to the holders of "Pelican" shares, and a Stock Exchange quotation will be applied for in due course. This is, in fact, a purely formal meeting to carry into effect a step which has already been approved by the shareholders of both companies. I therefore beg to move: "That for the purposes of the acquisition of the undertaking of the Pelican and British Empire Life Office, and upon the agreement with that object, dated July 10, 1907, becoming absolute as therein provided, the capital of the company be increased by the creation of 14,286 new shares of the company of £5 each, credited as fully paid up, such shares to be issued and dealt with for the purposes of the said agreement, and for no other purpose."

Mr. Bird: I have very much pleasure in seconding this resolution, which, as you know, has to follow the resolutions passed at the previous meeting. With regard to the purchase price, you may, perhaps, think it is a fair and equitable one, but if there is any question in your minds on the point, I may say that the committee has erred, if at all, on the side of liberality, which I am sure you will endorse.

The resolution was unanimously agreed to.

The Chairman: I thank you, once more, gentlemen, for your attendance here. We are very pleased to see you, and we hope to see you on December 12, and also early next year, when we trust we shall have a good report to lay before you. I may mention that the business so far is going on very satisfactorily.

The proceedings then terminated.

A. DARRACQ AND CO.

The second annual ordinary general meeting of the shareholders of A. Darracq and Co. (1905), Limited, was held, on Wednesday, at Salisbury House, Finsbury Circus, E.C., Mr. E. Festus Kelly presiding, in the absence, through illness, of Mr. J. S. Smith-Winby, chairman of the company.

The notice convening the meeting and the auditors' report were then read by the secretary.

The Chairman said: Fortunately for you, and certainly fortunately for me, our Chairman has been able to dictate the remarks which he would have made if he had been here, and with your permission I propose to ask the secretary to read those.

The Secretary then read the Chairman's speech as follows: The sales show an increase over those of the year preceding of more than £60,000—a most satisfactory and encouraging development of our business when one considers the growth of competition, the somewhat unfortunate conditions of the financial world, above all, the exceptionally bad weather which has prevailed during the greater part of the year. In the ordinary way one might have expected a corresponding increase in the profits. The nett profits, however, were £194,469, as compared with £203,000 the year before, and thus, for the first time since this concern was converted into an English company, a reduction is shown as compared with the preceding year. The reduction of £8,000 is not, of course, a very large one in proportion to the turnover, and it is very easy of explanation. Firstly, our costs for raw materials have shown a large increase owing to the abnormal rise in the price of metals. Secondly, we have spent in wages about £20,000 more than in 1906, owing to the larger output and the difficulty of obtaining skilled workmen in Paris during the busy period. Thirdly, with a view to clearing our stock of finished cars at the end of the season, and in view of the reduction of prices announced by other makers, we thought it prudent to offer certain increased advantages to our agents, and at the same time to add to our advertising expenditure. Lastly, an unfortunate and quite exceptional loss has been incurred in one of our Continental branches, through an excess of confidence in our representative, which has necessitated writing off £6,000. Taking all these circumstances into consideration, the directors consider that the nett profit of, in round figures, £195,000, which has been announced, may be regarded as a not ungratifying result of a difficult year's business. The closing of the liquidation of the old company has been delayed by reason of the non-settlement of the income-tax claim on the part of the Crown, in respect of which litigation is still pending. The Commissioners of Income Tax for the City of London have held that only such a portion of the profits as represents the portion of the business transacted by the company in this country is assessable to English income-tax. This appears a reasonable and common sense decision, which we were prepared to accept, but apparently it does not satisfy the Crown, who are pressing an appeal. Whatever will be the result of the appeal, it will be generally felt that in dealing with these international companies the Crown are endeavouring to place a construction upon the Income-Tax Acts which was surely never contemplated, and which goes far beyond the claims of natural justice. Attention to this subject has been publicly called on many occasions in connection with some of the great South African companies, but apparently the only aspect of it which interests the fiscal authorities is to impound as much money as possible without regard to ulterior and perhaps more important considerations.

You will have noticed many references in the Press to the so-called "crisis" in the automobile industry. That a change has taken place in the conditions of the trade is not to be denied, but I should prefer the change to be described as an "evolution" rather than a "crisis," so far, at all events, as we are concerned. That there has been something of the nature of a crisis amongst the small makers, and even amongst several large makers who have confined themselves to the manufacture of high-powered and expensive cars and now find themselves left with heavy stocks, is doubtless perfectly true, but this is a branch of the trade which we have never endeavoured to enter, and the expansion of the demands for cars of a moderate cost and simple construction, inexpensive to buy and economical to maintain, must all tend in favour of makers like the Darracq Company, who never had the ambition to cater specially for what may be termed the more pampered and voluptuous class of customer. The tendency of events is indicated by the endeavours of some of the leading makers, who have hitherto confined themselves to the most expensive and powerful types, to now enter upon the field in which we have occupied so prominent and, I might even say, so pre-eminent, a position; but these firms have already discovered the difficulty of suddenly changing their class of trade in competition with those to whom the ground is so perfectly familiar, and, without desiring to be optimistic, I feel that those who are interested in the Darracq Company have no reason to be dissatisfied with the prospects, and that they can look upon the future with quiet confidence, having the assurance that no firm in the whole industry, either financially or commercially, is more soundly established than our own, and that we are in a position to meet any competition that may present itself without fear or misgiving. Apart from the ordinary business in touring cars, we have already received orders for Darracq cabs which will occupy many months of next year. Then, again, we are laying ourselves out to do a considerable business in light motor-vans and delivery wagons—a branch which hitherto we have been unable to properly develop; and, thirdly, our new models have given a great deal of satisfaction to our agents and produced a widespread interest. So far the season of 1908 has hardly begun, but already our business shows a distinct improvement as compared with this time last year, and October was quite a brilliant month, our deliveries, including cabs, being nearly five times as much as those in October, 1906. (Applause.) This rate of progress will not, of course, be maintained, but it gives us a send-off for the new year which, without boasting, no other firm in the trade could emulate or even approach.

The Chairman then moved the adoption of the report, which was seconded by Sir William Avery, and carried unanimously, and the proceedings terminated with a vote of thanks to the chairman.

ARGENTINE GREAT WESTERN RAILWAY.

The ordinary general meeting of the Argentine Great Western Railway Co., Limited, was held on Wednesday at Winchester House, Old Broad Street, E.C., Mr. J. W. Phillipps, M.P., Chairman, presiding.

The Secretary (Mr. T. J. Dillon) having read the notice convening the meeting and the report of the auditors,

The Chairman referred to the delay in presenting the accounts, which, he said, was due to the large amount of work which had to be done in connection with handing over the property to the Pacific Railway. As regarded the future, the dividends on the Pacific Railway were usually paid early in November, and a delay like this was not likely to occur again. After dealing with the accounts, he went on to say that since he last addressed the shareholders he had had the opportunity of seeing the company's property. He had found the permanent way to be in most excellent condition, and their district was capable of enormous development. The policy of putting in small feeder branches to their railway was one which ought to have been begun earlier. With regard to Mendoza itself, he had been very much struck with the development of the town since he saw it previously. It had become quite an important place, and there was a substantial suburban traffic being developed. They were about to undertake immediately the doubling of a section of line about 25 miles where it went through Mendoza. This work was absolutely necessary, but it would not be very expensive, the estimated cost being, he thought, £120,000. Since their last meeting the line had been built which connected Bahia Blanca with their system through the Buenos Ayres Railway. With reference to their immediate future, he had received the following telegram:—"Prospects of vintage February next year most encouraging. Estimates show 15 per cent. increase in area. General prosperity Cuyo provinces continues, and I expect considerable development in traffic, passengers, general merchandise, and fruit. Through traffic with Chile promises well this season." In regard to the business over the general Pacific system, they had no doubt heard during the last few weeks rumours as to crops being damaged by frosts and by locusts, but on all the Pacific system wheat and linseed were absolutely safe from locusts. He had consulted the other principal Argentine railway companies, and had asked them how far he might speak for them that day, and they had all told him the same story—that the wheat and linseed were safe, and that the crop was magnificent. On the other hand, there were in certain places in the Argentine (there were three small places on the Pacific line) a certain number of locusts—a small number; but there always were locusts in the Argentine in the summer, just the same as there were always grasshoppers in England. The whole point was whether there were enough locusts to make a plague or not. Last year the Argentine suffered very little from locusts, and at the present time there were in the whole country nothing like the same number of locusts as there were a year ago. Some persons were making estimates about the maize crop, but it was impossible for any one at present to say anything reliable about the maize crop in the Argentine. A great part of the maize was not yet even sown. From the turn of the year, when the harvest began to move, the outlook on the Pacific Railway and all its system was that traffic increases were likely to be large; and, indeed, he should say the same of probably nearly all, if not of all, the other railways in the Argentine Republic. The Pacific Company had paid 7 per cent. on its own ordinary shares for the last four years, and up to date the traffic on the Pacific system showed an increase of £178,000. He therefore thought he might venture to say that their own future looked fairly satisfactory at the present time. The Hon. Charles N. Lawrence seconded the motion. The Chairman, in answer to a question with reference to the great increase in the expenses, stated that in many cases there had been a doubling of the company's staff, and simultaneously an increase in wages. The motion was unanimously adopted.

An extraordinary general meeting then followed for the purpose of altering the articles of association. This proposal was agreed to, and the proceedings terminated with a vote of thanks to the chairman and directors.

RHODESIAN BANKET.

The annual general meeting of the Rhodesian Banket Company, Limited, was held at Salisbury House, London Wall, E.C., yesterday, Mr. Hans Sauer, M.D., chairman of the company, presiding.

The Secretary (Mr. H. G. Latilla) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said they had not, acting on the advice of the auditors, thought it expedient to issue a profit and loss account this year, as practically they had done no trading, their efforts having been confined to opening up the Eldorado mine. On the credit side of the accounts it would be seen that their remaining claims, including 45 Rowdy Boys claims and 10,000 acres of land, stood at the low figure of £33,255. He confidently anticipated that for the Rowdy Boys alone they would receive an amount many times greater than this. Reviewing the position in Rhodesia he said that the progress of the country had continued steadily on the up grade, and stood out in relief against the general depression which had been hanging over the rest of South Africa. While the other States, without exception, were suffering from a dullness in trade, and large falls in their revenue, the resources of Rhodesia were quietly coming to the front. The population was increasing, land was being taken up, and it was a significant fact that the population in the towns had remained more or less stationary, whereas the population settled on the land had increased by about 2,000. The farmers had had an excellent season, and had made a satisfactory profit even on the lower prices which had ruled. They had reached a level now which was more normal and healthy, active farming being in progress on a much wider scale; while the reduction in cost to the mines added to their power in attacking the riches which nature had placed in the country. Rhodesia was now on the verge of becoming an export country, and if the price of grain could be reduced to 6s. per bag, it would become a grain-exporting country. As regarded the mineral resources, the gold-mining industry was developing into an important feature, the output showing a steady increase. With a better method of prospecting, vastly improved results could be obtained. A thorough geological survey was needed. The Banket Company itself had done no development work on any of its claim holdings during the twelve months. This policy was adopted because they did not know what calls would be made on their capital by the Eldorado Company for its requirements during the twelve months, and they would greatly benefit by the knowledge obtained as the result of the work here. Now that the Eldorado Company was fully started with a reduction plant, it was the intention of the Banket Company to resume development in the first instance on the Rowdy Boys during the coming year. His general impression of the Rowdy Boys claims was that they would probably develop a very large mine with payable ore, but of a lower grade than they had on the Eldorado mine. The other claims lying to the east of the Eldorado mine had not yet been touched. Reviewing the developments on the Eldorado mine during the year, he said it was again his pleasing duty to tell them of increasingly high assays at the bottom level, of a further large addition to the ore reserves, and of an all-round enhancement in the value of the mine. He was convinced that all the estimates that had been made of the amount of payable ore in the mine had been very much under-estimated. The actual results obtained to date down to the fourth level of the mine were clearly set forth in the report. He thought it would be evident from the particulars given that in the Eldorado they had a property of great and proved value. The length along which the pay ore occurred was increasing as development work proceeded, and on the bottom level the ore was richer than in any other part of the mine; while, as regarded the reserves, the mine was in quite an exceptional position. The prospects for important discoveries in the future were very bright. The intention of the directorate was at once to double the plant and to push the main shaft down to the 1,000 ft. level. He expected that would be done by next year, and that the Eldorado Company would be earning profits of from £12,000 to £15,000 per month, and be ready to carry another increase of up to 100 stamps. If that was so, of course the profit would again increase proportionately. As regarded the Eldorado and the Banket Company, the good profits now being earned would be multiplied in the near future, and the directors would endeavour to give the shareholders good dividends at the earliest possible moment.

Mr. H. L. Stokes seconded the resolution, which was carried unanimously.

THE CAPE COPPER COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN that at a Meeting of the Directors of this Company held to-day it was resolved—

"That a Dividend of 14s. per share, free of Income Tax, be and is hereby declared on the Cumulative Preference and Ordinary shares, payable on the 1st day of January, 1908, to the Shareholders on the Books of the Company on the 2nd of December, 1907, and that the Transfer Books be closed during the said 2nd of December, 1907."

Holders of Share Warrants to bearer are informed that Preference Coupons No. 31 and Ordinary Coupons No. 42 will be paid at the above rate, free of Income Tax, on presentation at the Company's Office.

By order of the Board,
P. J. FRANKS,
Secretary.

9, Queen Street Place, London, E.C.,
27th November, 1907.

NOTICES.

To the Holders of the 5 per cent. Profit-Sharing Secured Notes of the

UNDERGROUND ELECTRIC RAILWAYS COMPANY OF LONDON, LIMITED.

The Board of the Underground Electric Railways Company of London, Limited, has been for some time considering, in conjunction with Messrs. Speyer Brothers, of London, and Messrs. Speyer & Co., of New York, the best plan for dealing with the notes which fall due on 1st June, 1908.

A plan is now in course of preparation for the extension and conversion of the notes and the provision of further moneys for the requirements of the Company.

Owing to the serious financial situation all over the world the Directors feel that it is inexpedient at the present moment to take the steps necessary in order to carry through the plan. As soon as the necessary arrangements can be made the plan will be published and submitted to the Noteholders and Shareholders for their consideration and approval.

In the meantime the above-mentioned houses, with Mr. Lazard Speyer-Ellissen, of Frankfort o/Main, have arranged to purchase at their face value from the Noteholders the coupons falling due on 1st December, 1907, and the Sterling Noteholders are invited to present their coupons in due course to the London & Westminster Bank, Limited, Lothbury, London, E.C., for the purpose of carrying through this arrangement.

A statement of the Company's affairs will be published with the plan.

By order of the Board,
W. E. MANDELICK, Secretary.

Hamilton House, Victoria Embankment,
London, E.C.,
27th November, 1907.

To the Holders of the 5 per cent. Profit-Sharing Secured Notes of the

UNDERGROUND ELECTRIC RAILWAYS COMPANY OF LONDON, LIMITED.

Messrs. Speyer Brothers, of London, Messrs. Speyer & Co., of New York, and Mr. Lazard Speyer-Ellissen, of Frankfort o/Main, have arranged to purchase, at their face value, from the Noteholders, the coupon falling due on the 1st December, 1907, and the Sterling Noteholders are invited to present their coupon in due course to the London & Westminster Bank, Limited, Lothbury, London, E.C., for the purpose of carrying out this arrangement.

The holders of the sterling notes are invited to deposit their notes, with the coupons, at the London & Westminster Bank, Limited, pending the publication of the plan mentioned in the Company's advertisement of to-day's date. The Bank will issue against the deposited notes receipts transferable by delivery.

If within twenty-one days of the publication of the plan any bearer of a deposit receipt by notice in writing, addressed to the London & Westminster Bank, Limited, expresses his dissent from such plan, or if the plan be not published before the 1st day of June, 1908, a note of equal nominal value to that represented by his deposit receipt will be delivered free of charge to the bearer of such deposit receipt in exchange for such receipt duly endorsed. If within 21 days after the plan is published such notice of dissent is not given by the bearer of a deposit receipt, the aforesaid bank may treat him as assenting to the plan, and may give on his behalf any formal assent which may be necessary. When the plan becomes effective the bearer of the deposit receipt will be entitled in exchange for his receipt, duly endorsed by him, to the rights and benefits attached by the plan to the note represented thereby.

A similar notice will be published in New York by Messrs Speyer & Co. dealing with the notes in United States currency.

SPEYER BROTHERS.

IN THIS MONTH'S

FINANCIAL REVIEW OF REVIEWS.

The Topics of the Month. The Month's New Issues. Digest of Companies' Reports.

To be had of any Bookseller and Bookstall in the Kingdom, or of the Publishers, No. 2, WATERLOO PLACE, LONDON, S.W.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XX.—No. 518. New Series. SATURDAY, DECEMBER 7, 1907. (Registered as a Newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first; its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHERS' NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the **Half-Yearly Volumes price 1s. 6d.,** postage **4d.** extra. Bound Volumes **16s. 6d.,** or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

Is the Crisis Ended?

It is not surprising at all that people should be eager to note whatever indicates the approaching end of the crisis. A 7 per cent. Bank rate must hurt trade in many ways, turn slender profits into more or less severe losses, check new developments, cause taxation to become crushingly burdensome, and force liquidation not merely on the stock markets, but wherever speculative engagements are open. Prolonged, a high rate for money must cause disastrous failures, because it is eating into resources already in too many instances attenuated by the prolonged strain that has gone before. Bankers and dealers in credit must be hard put to to make ends meet or to avert disaster among their clients, and the longer dear money prevails the worse becomes their plight. No wonder, then, that everybody should be eagerly scanning the financial horizon for indications of coming relief, or that the moment favourable symptoms appear a rush should be made to put rates down, a clamour be raised for a reduction in the Bank rate.

We should all welcome lower rates for money, easier circumstances in all directions, but a sure basis for them is not yet reached. The mere fact that a little gold has come in, or been released by India, must not be allowed to mislead us any more than flashes of recovery in prices on the Stock Exchange. Nor will it be wise to place much confidence in the cessation of gold purchases by the United States. Ameliorations of this kind are welcome enough, but they should not delude anybody into the belief that the worst of our difficulties has been passed. Let us admit that the more acute manifestations of a crisis are for the present over abroad, and what have we still to do and endure before calm returns to us? We have still to reinvigorate our own impaired economic vitality and to gather up and bury the results of past indulgence. Naturally enough men's minds revert to the experience of bygone crises, and jump to the conclusion that because we have as yet had no old-fashioned "panic," our position is stronger, our losses more easily surmountable than they were in those darker days. It is unwise to draw any such inference, for we are by no means out of danger of an old-fashioned panic even now. All hope that nothing of the kind may overtake the country, but the materials out of which panics spring lie around at this hour, and it only needs a surprise failure of magnitude to occur in the credit market to bring its whole delicate machinery to a sudden stop. Our danger is increased rather than lessened by the perfection of our credit instruments. We are the largest users of paper money of any civilised people, and our credit of all kinds rests on a smaller reserve of cash than that even of the United States. Therefore, should anything occur calculated to throw the public mind into a paroxysm of fear and to cause a momentary return to hard cash as the medium employed in settling accounts, the consequences might be unimaginably horrible.

This may be true enough, but why dwell on such a gruesome subject at a time like the present? It is necessary to dwell on it because of the eagerness displayed to ignore the danger. We are not out of danger because the Bank of England has acquired a little gold, for the danger comes from afar and is the expression of a disease more deep-seated than mere doses

of gold, however liberal, can avail to uproot. This country and others suffer from a wasting away of their capital which has been in progress for many years. It has grown to be almost the universal habit to live on capital and to conceal the destruction by a substitution of credit for capital lost. This has gone on until credit has become a hollow thing everywhere, until by credit alone can the appearance of solvency be maintained. There are no real assets behind much of this credit, it is represented by debts, most of which could not be paid on demand on any terms, by property over-mortgaged, by businesses over-capitalised, by the obligations of States and corporations that have nothing but paper —more credit—to pay with, and whose drafts upon capital have grown to be both systematic and shameless. How is such a state of destitution wrapped in paper to be cured by the application of a little gold?

Before we can be certain that the long-drawn-out crisis through which the nations of the world, civilised and uncivilised, have been labouring for many years back is ended, we must see evidence of reform, of a return to habits of prudence and thrift on the part of both Governments and citizens. Failing economy, the crisis must continue in waves and spasms with intervals of calm and flickers of what looks like recuperation between to relieve the dreary monotony of slow decay. The present is a crisis differing in many respects from all crises that have preceded it, and not least in its universality. Money markets have gone on year after year helping each other when a local difficulty arose at any point, until they are now all equally helpless. Soon there will not be a national exchequer in the world important enough to count that will not have to wrestle with deficits. What problem is more insoluble at the present hour than the problem how to raise more money by taxation? Where is the State, where the municipality that is not wrestling after a solution and finding none, except through usury? It is always the moneylender we fly to, and he has committed himself so irretrievably in most directions as to have become almost as helpless as the debtors. It is, therefore, collapses among the masters in usury that we fear at the present moment more than any other event. The giant financiers have enslaved and impoverished nations to an extent that not only hinders them from proceeding easily along the old way—more loans, fresh taxes levied on the masses—but threatens them in places with democratic upheavals likely to be destructive of all credit magic for many a day. And as communities have set the example the individual has shaped his course until much of the world's accumulated wealth is represented by instruments of credit, and sometimes the wealth is gone and only credit left. How is it possible to conclude that the crisis is over when confronted by a position like this? It cannot be securely over until habits are changed. The best we can expect is that the subsidence will be slow, with intervals of relief, and the very universality of the disease may enable us to nourish this hope. Had money markets been isolated now as they were 35 years ago we should probably already have seen more than one furious panic and nerve-shattering collapse like that of the United States. But though crippled, most European markets continue still to help each other to an extent that has thus far averted the worst, and this help some of them may continue able to afford long enough to permit a spirit of sanity to obtain dominion over men's minds, rendering them capable of turning back into paths of economy and retrenchment.

But the latest displays on Wall Street do much to dash this hope. What are we to think of a community of business men claiming to be sane who initiate a fresh manœuvre to lift prices at the moment when the banks of the country are mostly suspended and heavily in debt; when industries are falling into the slough of reaction; when the glut of paper money is forcing gold to a premium; when railroads are threatened with receiverships; when the real estate and building "booms" have not even begun to produce their natural consequences to the eyes of the nation; when hundreds of thousands of workmen are losing their employment, and while farmers, traders, and manufacturers continue to defy the inexorable laws of commerce? Does the forestalling of crops conduce to returning solvency, or the resolution of the iron masters to ignore sense and reason and keep prices up? Beholding such-like displays, are we not driven to conclude that instead of being "over," the crisis in the States has hardly begun? Its consuming progress assuredly cannot thus be arrested.

President Roosevelt's Message.

It tastes like the manifesto of a man playing for a second nomination, and must have been heavy reading to the American people. So portentous is its length that three hours were absorbed in reading it from end to end, the telegrams say, and so far as anything fresh is said, it might have been condensed into an essay easily recited in five minutes. The President goes over the old ground most of the time, and spreads himself out upon what is called inter-State commerce, or through traffic, and on trusts, just as he has always done. A tribute is, therefore, due to his consistency, and if his rhetoric embodied practical suggestions of remedy or improvement it would be tolerable. Unfortunately, it does nothing of the kind. We are treated to turgid generalities, to much moralising, and to vague definitions of the duties and powers of the Federal Government. Broad hints are thrown out that railroads may be allowed to combine, but that they ought none the less to be brought under federal control in some way or another. "Ample means should be provided," he said, "to enable the Inter-State Commerce Commission, whenever in its judgment it is necessary, to make a physical valuation of any railroad." . . . And until the National Government assumes proper control of inter-State commerce, he goes on to say, "in the exercise of the authority it already possesses, it will be impossible either to give to, or to get from, the railroads full justice." Most true, no doubt, and little to the purpose. Equally indefinite are the President's deliverances upon the trusts. "A combination should not be tolerated if it abuse the power acquired by combination to the public detriment," he oracularly informs us. "Among the points to be aimed at should be the prohibition of unhealthy competition, such as of rendering service at an actual loss for the purpose of crushing out competition, the prevention of inflation of capital, and the prohibition of a corporation making exclusive trade with itself a condition of having any trade with itself." These extracts are fair samples of the President's confused and laboriously constructed style, and they do not lead us anywhere, for he immediately adds that "reasonable agreements between, or combinations of, corporations should be permitted, provided they are first submitted to, and approved by, some appropriate Government body." The Government is to save everything, and the people are nowhere to be left to work out their own salvation.

Much matter of this kind is introductory to a sort of deliverance upon the question of tariff reduction. On this also the President gives no clear note, and he cannot do so, bound as he is hand and foot, soul and body, to the monopolists who find the funds to keep the Republican Party in power. Were President Roosevelt the great man his admirers proclaim him to be, he would long ere now have discovered that the simplest and most efficient way to deal with railroad tyranny and industrial and trading monopolies would be to liberate the people from the thrall of an iniquitous tariff. It may be that Mr. Roosevelt knows this to be the true way as well as we do, but he dare not say so because were he to declare himself openly hostile to the existing infamous system whereby the people of the United States are taxed, probably to tenfold the amount of the revenue encashed from the high import duties, he would sacrifice at once any chance of renomination as Republican candidate for the Presidency. Therefore, he tells us that the country is "definitely

committed to the Protective system," and that any effort to uproot it "could not but cause widespread industrial disaster." Did any such disaster follow the enactment of the Wilson tariff under Mr. Cleveland's administration? Is not the country living to this day in no small measure upon the prosperity the reduced duties then put in force initiated? It is useless to put such questions to a man like Mr. Roosevelt, to any democracy-skinning protectionist. He does, however, admit that his "country enjoys such phenomenal growth as renders it probable that every dozen years or so the tariff laws should be carefully scrutinised, so as to see that no excessive or improper benefits are conferred thereby, that proper revenue is provided, and our foreign trade encouraged." These are words, words, meaning nothing except that the present Congress will not be asked to reduce the tariff. It may be that thus, and thus alone the tyranny of the Beef Trust, of the sugar monopoly, of the Standard Oil plunderers, of the hundred and one corporations by whom the trade of the country has been brought into thraldom, would be put an end to, but if any such policy were advocated by Mr. Roosevelt there would be no subscriptions forthcoming to meet the expenses of next year's campaign. To do him justice, the President seems to be conscious of his position in this respect, and his deliverance upon the campaign expenses question is suggestive enough. "The need," he says, "for collecting large campaign funds would vanish if Congress provided an appropriation for the proper and legitimate expenses of each of the great National parties." Here, again, Government, Government, the State, is turned to as the one efficient cure-all. To an outside observer it would seem that a simpler plan might be found in throwing upon each constituency the expenses of its own little fragment of the great campaign, and in enforcing a complete sworn return of income and expenditure. It is even conceivable to the unprejudiced mind that the system of presidential elections now responsible for such an enormous waste of energy and dollars every four years might be done away with altogether, and the French method of selection substituted. That, however, is entering into questions which do not concern us here except indirectly, and we only allude to the corruption fund topic as a proof that, after all, Mr. Roosevelt may not be quite so blind to the evils attendant upon his position as a mere creature of finance as his Message would lead us to fear.

Equally devoid of light and leading are the President's utterances upon currency reform. Some minor changes are suggested by him pointing to greater control over the banks, and he actually thinks it worth investigation whether officers and directors of the National Banks should ever be allowed to lend the money of these banks to themselves. He ventures also to suggest that financial trusts should be subject to the same supervision as banks, and for the rest he tells us that the wisest legislation can only accomplish a certain amount, a fact known to most people beforehand, bestowing on all and sundry also a further mite of wisdom to the effect that no legislation can by any possibility guarantee the business community against the results of speculative folly. Most true all this, but not in the least helpful to a solution of the currency difficulty with which the United States is now struggling. To suggest that the currency should be regulated on a cash foundation, that the fiduciary money should be reduced in quantity, and that no banks ought to be permitted to issue their own notes against mortgages of any sort, represents an idea of reform altogether beyond the grasp of this strenuous politician. Small checks and counter-checks, interference of the federal authorities here, there, and everywhere, in order to enforce respect for at least the forms of common honesty, mark the bounds of his reforming ambition in this direction.

It is another matter, however, when we come to taxation, and the demands of the State for more money. Economy, a reduction in the growing outlay of the Federal Government, which will soon become the most urgent question of the hour, is never even hinted at in the Message. On the contrary, the most definite proposals in the whole of the torrent of words, relate to additional taxation. Mr. Roosevelt wants a graduated income-tax to be imposed, and also an inheritance tax, especially the inheritance tax, which he declares to be a far better method of taxation, and far more important for the purpose of having "the fortunes of the country bear in proportion to their increase in size, a corresponding increase and burden of taxation." And the Government, as a matter of course, should have the absolute right to decide "as to the terms upon which a man shall receive a bequest or devise from another." Does Mr. Roosevelt here indicate in his involved way a confiscation tax on large fortunes? If so, this may perhaps be regarded as a bid for the popular vote since it in no way represents statesmanlike ideas upon taxation. And already, as he has to admit, the Supreme Court has pronounced an income tax unconstitutional. Nevertheless, he is of opinion that a graduated income-tax of the proper type would be "a desirable feature of federal taxation," and hopes that "one may be devised which the Supreme Court will declare constitutional." More money, money, money, no matter from where, that is the most distinctive note in all the sixty-three pages of this Message. It is adroitly sounded, too, so that the votes of the multitude may be caught by it.

And we get the President's reasons for demanding additional taxation in his deliverance about the navy. Like our own Government and the Governments of Germany and France, but especially our own and the German, a demand for more ships is founded by him upon the failure of the Hague Conference to deal adequately or at all with the question of limitation of armaments. Because great European countries are rushing towards financial impotence through their rivalry in the construction of monstrous vessels of war, the United States must follow suit. "It is not enough, in my judgment," says Mr. Roosevelt, to build one battleship of the best and most advanced type every year. That would "barely keep our fleet up to its present force." He wants four battleships per annum to be laid down, or, at any rate, that this number should be put upon the stocks in the present fiscal year, and not battleships alone, will demand more money, taxes, taxes. An additional expenditure will arise in providing thoroughly trained navigators and slaughterers to man the ships, docks to hold them, coaling stations, colliers and supply ships. "We are extremely deficient in coaling stations and docks on the Pacific," he observes, "and this deficiency should no longer be permitted to exist." "Plenty of torpedo boats and destroyers should also be built, and both on the Atlantic and Pacific coasts fortifications of the best type should be provided for all our great harbours." No wonder an income-tax and an inheritance tax are demanded by this zealous Jingo who apparently never pauses to ask what share the Republic he presides over is likely to have in European quarrels. Who among us is going to fight the United States? Certainly no European Power, least of all England. Who, then, is going to interfere either with the commerce or the independence of the great North American Republic? It has no far-ranging ocean-going mercantile fleet to be preyed upon by the navies of Europe or of Japan and China; and although there may be Press-fanned ill-feeling between the States and Japan just now there is no inclination whatever on the part of Japan to make any hostile demonstration against the Pacific Coast. What then is this tremendous fury in shipbuilding and dock and fortification construction prompted by? Merely by a kind of insane emulation, we should judge. Because the Republic is rich or looks it, populous and expanding in all directions, therefore it must ape the old States of Europe and waste its wealth in futilities of this description. Perhaps, though, the United States is going to inaugurate a period of Imperial expansion.

It may have evil designs upon Mexico or may desire to dispute with the Germans the control of Brazil, or to coerce the whole of South America into servility as its customer to the exclusion of Europe; or the fleet may really be going to the Pacific in order to make a descent upon the coasts of Japan or to lay the foundations of encroachments upon China. We cannot believe that any of these mad designs are really entertained by the serious people of the Republic, and therefore see no reason to ascribe any other motive for this lavish waste of the people's money than vanity, the pride of power of the boundlessly wealthy in paper dollars, and an imitative zeal the forerunner of disaster. Before many months are over we rather fancy the political bosses and their candidates will have to pipe another tune.

Economic and Financial Notes.

ROSYTH.

The Admiralty is to have its way. Lord Tweedmouth has said so in all meekness, and there is no longer any doubt about it. A new "naval base" is to be established on the Forth, and a prospect is thus opened for expenditure amounting to anything you like from £3,000,000 to £5,000,000. For obviously it would be folly to construct great docks in the Forth estuary without protecting them by fortifications, and it is quite easy to lay out £2,000,000 or £3,000,000 in that direction alone, especially now when guns are so costly. Whatever happens to other parts of the kingdom, therefore, the south-east of Scotland ought to flourish exceedingly for the next five or ten years. Only what we are afraid of is that it may be more difficult to raise the money during that period than it has been in recent years, and it would be awkward to get committed to so large an expenditure when Budget deficits became the rule. There is also another fear. Mr. Maxse and other distinguished members of the Blue Funk school are sure to light upon other food for their terrors. That 100,000 German soldiers of their imagination might land in the Moray Firth, for instance, and then where would all the fortifications on the Firth of Forth be? They might be turned. Indeed, it is quite within the capacity of Blue Funk imaginations to picture the arrival of these 100,000 German soldiers in tourist steamers disguised as mere sightseers, and the numerous inlets round the north and west of Scotland might be laid hold of as depôts for foreign fighting materials, so that the tourist soldiers could leisurely equip themselves in the north and march upon Glasgow without paying the slightest regard to all the elaborate preparations made on the Forth for their reception. Thus it becomes an endless business, defending the United Kingdom from foes of the nightmare imagination. Oh, how it could riot in that wild north!—Perth and Glasgow seized, Rosyth outflanked, Edinburgh Castle stormed, and the railway lines to the north and west blocked by the carcases of the slaughtered garrison heaved over the edge of the castle rock; Edinburgh city sacked and its banks robbed of their notes. Here let us pause. Who knows but what the notes might end the invasion? Their smell might suggest disease to scientifically trained German nostrils, or the simple Teutons might think they had lighted on great riches and go galumphing home with their pockets stuffed. It is a slender hope, but our spend-all-and-die patriots leave us so little to cling by, with these horrid Germans all thirsting for our blood.

PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY.

Compensations seem always to come to this powerful old shipping company, probably because it has the leading place in the carrying trade of India, China and Australia. In the report for the year ended September 30 last the directors again dwell upon the fact that the general trade in Eastern freights was unfavourable to shipping, but there was some compensation in the Australian trade and occasionally the trades of India and China showed traces of improvement. And one way or another the freight and miscellaneous revenue of the company exceeded that of the previous year by nearly £34,000. This improvement, the board explains, is mainly due to casual business. Still, and in spite of increased expenditure, the earnings left something to the good. Passenger receipts show continued expansion, and were approximately £63,000 above those of the preceding year. These increases, however, left but little trace in the nett income, which at £226,929 is only £7,077 more than that of the previous year, this total including £11,052 brought forward. But the income is sufficient to enable the directors to pay the full dividend on the preferred stock and to give the deferred stock a final dividend of 6½ per cent., making 10 per cent. for the year, together with a bonus of 3 per cent., bringing the return on the deferred up to 13 per cent. and on the entire paid-up capital of the company, amounting to £2,320,000, to 9 per cent. This leaves a balance of £18,129 to carry forward, or just the amount of the additional nett profits larger than the previous year's balance. The value of the fleet, moreover, has again been written down severely, no less than £459,779 having been devoted to this purpose in addition to the £12,109 received for ships sold. So the fleet value is now £3,559,751 or about £8 10s. 9d. per ton as against £10 7s. 6d. a year back.

Last year's valuation, however, was exceptionally high because of the large amount of new tonnage ordered or put into service, and the company is again under the necessity of laying down new ships owing to the demands made by the new mail contract which has been entered into with the Government for seven years from February 1 next at an annual subsidy of £305,000 or £35,000 less than the present subvention. Smaller though the subsidy is, the speed of the vessels has to be increased on the Indian line to a minimum of 16.1 knots, on the Australian line to a minimum of 15.2 knots, and on the China line to a minimum of 14.5 knots. It results from this acceleration of speed that the Indian mails will be delivered in Bombay within 11¼ days after their despatch from Brindisi, and the time between that Italian port and Adelaide is to be 26½ days, and between it and Shanghai 28¼ days. May we hope that some benefit from this acceleration will be granted to those who have to send letters and other mail matter from this side? It would be an immense benefit to many people, and above all to the proprietors of weekly newspapers published on Saturday, if the mails for the East and Australia left on the afternoon of that day instead of on Friday evening. The difference of time is not great, and a concession of this kind ought therefore to be practicable. Throughout the year this company performed all its services regularly and punctually, its vessels having travelled altogether 3,104,349 nautical miles with never an interruption or delay. Coal has been dearer, and that and the higher speed at which the vessels have been run have increased the cost of working this great traffic by about £60,000. This increased cost is likely to continue, and may perhaps be augmented, but, on the other hand, we may hope that the return of peace in the Far East will give a sensible impetus to trade with that part of the world, and also that the foreign trade of India will not suffer appreciably through the absence of rain there. Australia also may continue to give a larger business to the company and to its fellow contractor for the Australian mail service, the Orient Company. At all events, the threat of an Australian mail service created and subsidised by the Commonwealth Government has been withdrawn, and the old services will be continued, under some restrictions, perhaps, which should not do the companies engaged in it any permanent injury. Owing to the new mail service the resumed building operations involve the construction of three vessels of the "M" class, as also of an express mail steamer of the *Osiris* type, but possibly enough payment for these new

ships may be so arranged as to avoid any material increase in the book value of the fleet. The cost of the ships, though, is likely to be greater, both because of the increased price of raw materials and labour and the higher degree of luxury demanded by modern fashions.

The Failure of Wireless Telegraphy.

Perhaps failure is too strong a word to use, and yet we do not well see how another can be selected after what has been made public within the last week or two regarding the absence of secrecy attending the transmission of messages by this system, whether over long distances or short. Take Professor R. A. Fessenden's revelations as an example. A letter from him appeared in the *Electrical Review* of November 22, and gave an account of his experiences with Marconi messages. The professor apparently has an independent wireless station in his own control on Brant Rock, Massachusetts, and at that station he picked up a number of messages transmitted by the Marconi apparatus to and from Europe. Not only were the contents of these messages recorded by his apparatus, but he noted the speed with which they were sent and the number of times it was necessary to repeat them before certification of their accuracy could be given. One message, for instance, came from Mr. Sidney Buxton, our Postmaster-General, to Marconi on October 19. It ran: "Congratulate you warmly on successful transmission of wireless telegrams across the Atlantic." That message was sent twice between 2.55 and 3.05 o'clock, and Mr. Marconi's reply had also to be transmitted twice on the following day. Some of the messages had to be sent three or four times over before they could be fully made out. Thus one message despatched upon October 14 from Glace Bay to London had to be sent twice at the rate of seven words per minute, and there seems to have been no difficulty whatever in gathering up everything of this sort. The wandering communications were received by two operators on Brant Rock, whether sent from Glace Bay, Nova Scotia, or from Clifden in Ireland. Some of the messages were also received by the company's New York operator. The messages were taken down exactly as received, including the spelling.

This experience was repeated in a different form the other day in Switzerland. A Marconi station has, it seems, been set up on the Righi, and the experiment was tried of sending messages from that station to a movable one placed in a small valley of the Canton de Valais, almost completely surrounded by high mountains. No message, however, was received at that station from the Righi, but it received numerous other despatches in German, French, English, and even Russian, the origin of which was unknown to its attendants. These messages comprised reports on the health of the Emperor William, the Duma, and the departure and arrival of ships. The interrupted messages, which were very distinct, are believed to have come from the large station in the South of England, and perhaps from Paris. Apparently, however, the mountains prevented the electric waves transmitted from the Righi fixed station from getting down to the movable one in the valley. But, anyway, there is no secrecy, and can be none. Great as the uses of wireless telegraphy may be, it is obvious from facts like these that the system is untrustworthy for the conveyance of private messages, and that it is apt to fail under conditions in any degree removed from the usual.

Amalgamated Press, Limited.

And behold the family of the Harmsworths, is numerous and enjoys many aliases. A lord presideth over it, and its members all share with the moneyed meek many possessions. Amongst them is this Amalgamated Press, whose appropriate virtue is as that of the widow's cruse. Printed sheets of many kinds are owned by it, and some of them stay with a sorrowing world, it may be, but a few months, others live for years, and some few may be destined to flourish as long as the Harmsworth family itself. But whether these caves of the sacred Harmsworth writing perish soon or live late, they always yield steady profit to the "Amalgamated Press," and from the profits bounties flow to those men and women who have put their trust in the noble family and bestowed upon it their hoards. Each year on October 31 a balance is struck, and the keepers of accounts set forth how much the sale of the printed or "littery" matter, as the dialect of the street hath it, has yielded in the year then closed. And the profit for the past year differed from that of the year before by £723 it was by this sum larger—and that of the previous year was only £1,630 more than that of the year still before, and all men concerned were each year made happy by the news. And whereas in former years the shareholders waxed fat on "bonuses," they now receive no graces of the kind, but the whole 40 per cent. bestowed on them is provided as mere dividend 12½ per cent. interim and 27½ per cent. now. And in order that the glory of the family may be increased, £25,000 is removed from the profits and placed to reserve, and the reserve, which will thus appear as £250,000, is to be employed in the blessed work of developing "the important pulp and paper-making undertaking" in Newfoundland which the great Harmsworth family has commenced in order to protect it and its many adventures in printed sheets "against the threatened increase in the cost of raw material."

A great and noble duty of a surety, for did not the Amalgamated Press gather together £890,084 last year by the sale of its dried and printed pulp and by the hire received for the advertisements it disseminated; and out of this did not the lean scribes who provide the stain for the pulp receive £129,620 for food and raiment, and was not £25,000 "written off" cost of buildings and £21,476 off "investments," whereby the riches of the company grew so much that its written-down investments stand £30,279 higher than they did at the end of the tenth year, so giving the Harmsworth family a fund of £375,124 from which to extract the money for the pulp mills? Nay, there is also £20,114 more in the form of shekels and promises of money-changers to refund shekels whose united pile is now £192,521, and the company owes only £78,441 to creditors and is owed but £67,798 by debtors, and the goodwill and copyrights bought from the great Harmsworth family have cost the company no more than £780,000, notwithstanding the multitude of new printed sheets that have floated before men's eyes in the wind of a day and vanished, or the numbers that still live. And, dead or alive, they are surely worth this for all the harm they have done; and the buildings in which these treasures, together with £9,000 worth of paper, &c., are kept, together with the machines, all perfect of their kind, by which the printed pulp is handled, blackened, and thrown out upon the world are only valued at £113,020.

And the great Harmsworth family requires and orders the Amalgamated Press shareholders to permit it to increase to £272,000 the sum to be immediately devoted out of their funds—of which £128,000 has already been spent—as a first instalment of the £400,000 in all to be furnished by them; this being half the proposed capital of the Anglo-Newfoundland Development Co., Limited. About this new company, their latest glory, the Harmsworth family say many things likewise, and what they say is enforced and beautified by many pictures wherein a bleak, bare land of much water and many cringing, creeping woods and rocks and barrenness and incomplete buildings, and logging camps and snow and log cabins and some human beings are set before the eye to bear witness to the excellence of the new possession with which the Amalgamated Press is to be endowed by the Lord Northcliffe and his brethren and their serving men and leaders of coherts in the war against dear pulp.

Baku Russian Petroleum.—Production of crude oil for week ended November 30 was 319,000 poods, equals 5,143 tons.

Russian Petroleum and Liquid Fuel.—Production of crude oil for week ending December 1 was 271,000 poods, equals 4,369 tons.

American Business Notes.

A simulation of cheerfulness has come over Wall Street, which, perhaps, deserves commendation for its boldness, or shall we say impudence? Trading on "margins" has been resumed in the devil-take-the-hindmost style, and prices went spinning like shuttlecocks. In no essential has the position in America improved. The banks are still living on Clearing-house certificates and other credit devices with very few exceptions. The issue of Treasury notes in order to inflate the currency has been a failure, and the Panama bonds have been subscribed by help of credit, while throughout the country industries are being curtailed, and in the produce markets inflated prices are still maintained, so that the outflow of grain and cotton is less than it should be if means are to be found with which to pay back the borrowed gold. But just because the deficit in the reserves of the New York Associated Banks shown by the weekly averages has fallen off £223,000, the order has gone out to the Press to write everything up. A "bear hunt" was started with eminent success last Monday in the Wall Street market, and the most determined effort is obviously to be made to induce Europe to buy. Wall Street is still convinced that we are all fools in Europe. But Europe sold instead of buying, and Tuesday brought renewed hesitation, though the bulls are still at it and planning to force prices still higher before the holidays in order to "beget confidence." Why not? it is a mere matter of certified cheques and Clearing-house certificates of bull and bear.

If Europe would only load up with the paper of American railroads and trusts the difficulties of the Republic would for the time being be surmounted or shoved aside. And doubtless there are many people in this country eager to buy, people who, like the Bourbons, are incapable of learning anything. Nothing will keep them from gambling when they see prices going up. Substantial buying there is not likely to be much of consequence for many months to come, and we believe this latest bold game of the paper magnates will fail as previous ones have done, just because sensible people on this side have neither the means nor the inclination to invest in American Railroad shares at present. Essentially the position is as bad as ever, and must be so. It will, indeed, get worse before it is better, as the following interesting and perfectly independent communication received by us from New York indicates. The writer has been 25 years in the States:—"What I want to say to you is a word of congratulation on your views on financial things here, which I believe to be perfectly correct. We have a subsidised Press here. No American paper dare publish such views as you are expressing. We shall have many failures here in January. Big stores, &c., are being tided over to clear out Christmas stocks, &c. We shall have the Dead Sea period in March, presidential nominations in June. No daylight ahead till after our election in November, 1908, as the complexion of our next Congress may change the whole policy of the country; 1908 is therefore our political year—full of hesitation and uncertainties; 1908 will see many of your predictions come true."

Numerous causes have been suggested for the new speculative activity on Wall Street, and one of the most plausible is buying by the insurance offices to try and force prices up so that they may conceal their insolvency. So bad is the position with them that the suggestion has been seriously put forward that they should take the securities they hold into the coming balance-sheets at the quotations of December 31 last. Should their managers be now endeavouring to lift prices for window-dressing purposes there will be some interesting bankruptcies before long.

But the paper millionaires have also been at their old game—putting up prices to catch the bears and draw the foolish bulls in again. This week they have probably added a little to their wealth from both sources, and could they only continue the play, there seems no reason why "Unions" should not be at 200 and "Canadas" at 300 before six months are over. It is all "tug of war," and the whole banking system may go to pieces for all the players need care if only they can warp in the outside public, above all the European public. They would then pay their debts and differences with your money, good reader! And the more bears there are the better the market croupiers like it.

Is the failure of the National Bank of Commerce in Kansas City the beginning of that "real estate boom" subsidence now long overdue? Watch and see. It had a paid-up capital of £200,000 and a "surplus" of twice that amount. Its liabilities to depositors lately amounted to £7,000,000, but at the date of the stoppage only £4,800,000 or so is said to have remained due, but we must wait for particulars and the moral. After all, when nearly all the banks are in a state of suspended animation the extinction of one or one dozen of their number may make little difference.

In all probability the Presidential election of next November will be the most momentous in the recent history of the United States, and between now and then the process of exhaustion must go on. Even amid the upward rush of prices in the beginning of the week call money was rising again to a high figure. It touched 15 per cent. on Monday, averaging about 12 per cent., and the premium on gold reappeared then, although it only rose to 1½ per cent., and has not since been much if any higher than 2 per cent. Call loans, too, have been cheaper since, ruling at from 5 to 8 per cent., with dips in the evening to 3 and 4 per cent., and after the comptroller of the currency made his "call" for a bank show as at December 3 "funds" have been let out—*i.e.*, there has been more paper money offering. So the premium in gold hangs around 1½ per cent.

It is not currency that the people of America want but cash still, and it is surely a significant fact that, in spite of gold imports aggregating about £20,000,000, the increase in the specie held by the New York Associated Banks was only £351,400 last week. New York is still having to send the metal into the interior, and still the fabric of the country's business and finance rests nearly as much as ever on a treacherous basis of credit. The reserves of the Associated Banks of New York are still £10,600,000 below the statutory minimum, and nothing satisfactory is being done to put the country in a position to meet its obligations abroad, for the returns of the foreign trade for the month of October indicate continued damming up. The value of cotton sent out of the country during that month was £2,540,000 less than that of the preceding October, and the total exports have not been sufficiently in excess of the imports in value either in October or for many months back to enable the United States comfortably to meet its engagements abroad. For the ten months of 1906 ended with October the excess value of exports over imports—the "excess favourable balance," as those infants in economics, the American journalists, phrase it—was nearly £72,000,000, but for the same ten months of the current year it is less than £58,500,000. That is not nearly enough to enable American bankers, merchants and financiers to meet the interest payments due in Europe upon American securities held here, to cover the cost of freight and insurance upon American oversea trade carried in foreign ships, to provide for the drafts of American citizens travelling or residing abroad, and at the same time to lay down funds to pay for the gold recently borrowed. The greater part of the gold imported by the Union is borrowed—the product of credits raised here on cotton and grain bills for the most part—and unless the produce comes forward in a much increased volume there must be a renewal of distress in its most acute form early in the New Year. American bankers and financiers seem to have inoculated farmers and gamblers in produce with the notion that if crops are only held back high prices will more than compensate for low quality or diminished quantity. They are going to find out their mistake, and before

very long either. Lancashire is not going to plunge into "bull" operations in raw cotton merely because that would suit the book of the players on the other side, and help to relieve the acute financial distress prevailing there. Nor are our millers going to buy American grain at forestallers' prices as long as a bushel is available in other places at a lower quotation.

A recent return of the United States Treasury once more emphasises the fact that it is not a scarcity of currency the United States is suffering from, but a redundancy. Currency has been utilised in credit operations conducted in the approved "Arabian Nights" style, and now that this structure of false prices has to a considerable extent crumbled, there is much more currency available than the people could utilise even were confidence in their banks restored, which it is not. And it is paper currency which is going up in quantity. Gold coin and bullion in active circulation has decreased comparing November 1, 1906, with November 1, 1907, by nearly £23,000,000, and the total has come down to about £115,000,000. This decrease in coined gold, however, has been nearly balanced by an increase of £20,270,000 in the gold certificates in circulation, the total of which was, on the last date given, £135,460,000. Standard silver dollars are also up rather more than £1,000,000 to nearly £18,000,000, and silver certificates have declined by £1,815,000 to about £93,000,000. Passing by subsidiary silver we come to greenbacks, the total of which outstanding on November 1 last was about £69,000,000, a slight decrease, but when we come to notes issued by the National Banks we find an increase of £4,120,000 and a total of no less than £119,000,000, the whole of which is unsecured paper money. It is true that bonds of various kinds are lodged with the Treasury against these notes, but most of these bonds constitute no proper security for circulation, because they are perfectly unmarketable, and it is here that the inflation has been most conspicuous. Altogether the money in the hands of the public and in banks throughout the country was on November 1 last £575,274,000 and of that total only about £250,000,000 consisted of genuine standard money or paper representative thereof.

Like European Governments the Government of the United States is continuing to spend in a most determined fashion, and wholly without regard to the real interests of the Republic. The statement of revenue and expenditure for the ten months of the present year ended with October shows that the income has been upwards of £9,000,000 in excess of that for the same period of 1906, and that the expenditure has increased during the same time by £6,006,000. This would seem to indicate that the revenue is well ahead of the outgoings, but the United States' fiscal year ends on June 30, and between now and then it is only too probable that the revenue will so far fall off as to cause the Government year to end with a deficiency. At any rate, separate headings of outgo all show increases for the previous year, and the revenue is now falling back. Thus the cost of the internal administration is for the ten months of 1907 covered by the figures nearly $9,000,000 up. The War Office has spent $1,328,000 more, the navy nearly $2,000,000 more, feeding and coddling the Indians has cost about $1,100,000 more, the increase in the pension charges has been $3,403,000 and the expenditure on public works has risen by nearly $20,000,000. Against all these increases we have a decline of only $3,458,000 in the interest charges. The Panama Canal no doubt accounts for some, if not all, of the increase in the outlay on public works, but the aspect of the return is eloquently suggestive of riotous extravagance in all departments.

A little prematurely perhaps, but usefully all the same, a distinguished group of financiers in Philadelphia has been discussing the lessons of the financial crisis. Most of the speakers apparently favoured the establishment of a central bank as the one scheme likely to put the country upon a straight financial path. Not having heard or seen their reasonings we cannot give judgment on this idea, but such a bank was tried many years ago and came to an ignominious end, and we should rather lean to the view that all banks ought to be deprived of the power to issue paper money, and that such money should be emitted by a special department of State in whose control the entire currency of the country might be put, were it not that a continuous policy in the management would, under present circumstances, be impossible. One speaker, Mr. H. J. Schiff, repeated the views expressed in these columns last week with reference to the plethora of paper money. "It will drive out gold," he said; and another speaker, Mr. C. H. Treat, had some wise words to say, for he advocated the withdrawal of greenbacks by the United States Government at the rate of £20,000,000 per annum. He also wanted silver certificates to be withdrawn and replaced by 2 per cent. fifty-year bonds at the rate of £10,000,000 annually, these bonds to be doubtless employed in securing banknote money, a direction in which we cannot follow him. He wisely added that the silver withdrawn might be used up in subsidiary currency, and undoubtedly if the greenbacks were removed out of the way, that inelastic mass of paper money inherited from the Civil War period, and also the silver certificates now circulating on a gold valuation against depreciated bar silver, something would be gained and the way perhaps opened for such a reform in the banknote circulation as might give the country an automatic elastic currency. At least, this would be the case if gold coin took the place of the paper withdrawn. But there will be no permanent stability in the money of the Republic as long as every twopenny-ha'penny bank in it is allowed to issue notes on credit easily given.

To help the market on its upward way a new deal is said to be in process of completion. Those great financial rivals, Harriman and Hill, who fought each other for the control of the Chicago, Burlington and Quincy Railroad, are said to have buried the hatchet and to be now elaborating a transaction designed to bring the Great Northern, Northern Pacific and Union Pacific railroad companies into "harmony." Probably enough, Mr. Hill has found the burden of carrying the Burlington road rather too much for him of late. His two other controlled properties, the Great Northern and Northern Pacific, gave $200 in a 4 per cent. jointly guaranteed bond for each $100 of Burlington common stock, and this liberality seemed all right for a time as long as the country was absorbing whatever amount of paper might be thrust upon it. But times have changed of late, and it is quite possible that in coming years the Burlington road may not nearly earn the 8 per cent. on its old stock necessary to cover the interest on these bonds. On the other hand, the Union Pacific has been smothered beneath truckloads of paper acquired by financial operations, some of them of the most questionable description, and financed by issues of Union Pacific securities. This load is also probably too much for the company. What more natural than that Hill and Harriman should unite and concoct a great "holding" company into which these embarrassing bales of paper may be thrown, and whose future career the magicians may think themselves able to watch with indifference after a successful sale out or "plant"? Some plot of the kind is obviously in course of elaboration, and its contemplation is utilised meantime as a bull argument on the Wall Street market.

We are entirely without the capacity to understand this sort of stimulus to buying, and did we speculate should accept the news as a hint to sell. But there are other hints even more plain, and not the least of these is a probable rate war between the passenger lines. It has been brewing this long while back, and the imminence of receiverships for some of them offers the hint and the opportunity to begin the game of "beggar the stockholders." A rate war is always the overture to the "we are all bankrupt" opera. It creates the requisite confusion and provides excuses for the catastrophe that to some extent withdraw shareholders' minds from the

corrupt or scandalous abuse of financial instruments to which it is really due. A cessation of a state of war is also capable of being turned to good use as an inducement to the deluded stockholders to pay up assessments. "Now the conflict has ended, a period of unexampled prosperity is just going to begin."

How sad is the reflection stirred by the news, in Thursday's *Financial Times*, that the "railroad upon the sea," whose praises were chanted in The Investors' Review not so many weeks ago, should have gone into limbo already! It was the one Standard Oil enterprise we have found worthy of being commended, and we thought it might cost £4,000,000. But it seems Mr. H. M. Flagler, the Standard Oiler, whose pet the enterprise was, has been left in the lurch, as usual, by John D. Rockefeller at the moment when he most needed help; and now, after he has spent all his own money, £3,000,000 it is said, poor Flagler has had to pull up. "Very serious mistakes" have been made in estimating the cost of the huge arches to be built upon the ocean in order that the railway might reach Key West. It has accordingly stuck on a coral reef about 50 miles from that island, and ends where neither harbour nor terminal facilities can be provided for it. Thus all our praise goes for nothing, and one more victim of misplaced loyalty and vaulting ambition has gone down.

Passing Events.

The "All-red route" boodlers from Canada are at it again, and we are surprised to see a man of Lord Brassey's knowledge and standing giving them countenance. It should be unnecessary to instruct the British public on the unscrupulous knavery of this agitation, but if anybody wants instruction we advise them to turn to the letter from a Canadian correspondent, published in The Investors' Review of June 29 last, for it contains an unanswerable demonstration of the wicked unscrupulousness, to call it no worse, behind this attempt to impose upon the British taxpayer a heavy subsidy in order to start new lines of steamers on the Atlantic and Pacific, to enter into competition with those already in existence, and, in the case of the Cunard Company, already heavily subsidised. As the able writer of that letter pointed out, there is an "All-red route" already, thanks to the enterprise of the Canadian Pacific Railroad Company, and we have no doubt at all that it does not pay. Much play is made by the latest exponent of Canadian aims in this direction with the "saving of time," which is exaggerated, and even if not is no adequate foundation for the outlay of some millions sterling to start an enterprise, and the annual loss upon it when started of anything you like up to £500,000. We hope political leaders on both sides of the House will resolutely stamp out this impudent attempt to "boodle" British taxpayers. New contracts have just been entered into with the Peninsular and Oriental and Orient Companies for the carriage of the Australian mails, and New Zealand alone is not in a condition to pay its share of this "All-red route" fraud. It is a "Dick Seddon" inheritance, no doubt, but none the more attractive on that account.

We do not like the recent news from Natal. That there may be unrest amongst the Zulus is probably true because they are over-taxed, and have above all a bitter grievance in the excessive hut tax. For what they thus give to the white masters of their country they get no return, and being a high-spirited race, it is but natural that they should break out in fits of rebellion. At the same time, we have heard nothing that indicates such a state of danger as should drive the Natal Government to levy forces in order to overrun the Zulu country, and we are perfectly certain that Natal is not able to afford the expense of this expedition. It is the most absolutely bankrupt of our foreign possessions at the present hour, and could not make a show of paying its way for a single twelvemonth without the assistance of loan money. May we take it that the hope of being able to raise further loans on the pretence of paying for this war has had something to do with the discovery of a Zulu plot? Whatever the motive, it is pitiful to think that a repetition of the brutalities attending the recent conflict with certain Zulu tribes appears to be imminent. And the danger spreads much beyond Natal, for if the Zulus are subdued and maltreated in the usual way, the unrest is certain to spread amongst all the coloured natives of South Africa to the serious danger of outlying settlers in many parts of that extensive territory, and to the injury of Transvaal mining, whose labour supply is certain to be interfered with. Is that why Cape Colony and not the Transvaal is forward with an offer to help Natal? Cape Colony itself is nearly as poverty stricken as Natal, and we should not care to hold a single bond of any security issued by either of them.

France appears to be drifting into a war with Morocco that the Republic cannot afford, and Germany is looking on with something of a mocking smile. As yet the expense of the expedition is said to have been quite trifling, less than £150,000 extra all told for the land forces, but the Navy must be spending some money, and with each step forward taken by the French troops into Morocco the expenditure on land must increase. At a time when the people of France are, above all things, solicitous of living at peace with all mankind, when the pressure of taxation is driving the nation to, in the eyes of many, imperil its capacity for self-defence by shortening the time of service with the colours and the time for which reservists have to come back for training and manœuvres, a new war is being slid into which may last for years, and cost the Republic millions sterling as well as many lives. Surely this catastrophe might have been avoided or left to some other ambitious Power to embarrass itself with. Already the possessions of France in Africa are extensive and costly beyond her strength to maintain, with her stagnant population and continually mounting public expenditure on domestic affairs. To add war to the public burden is to provoke sedition and financial barrenness.

A suggestive harmony in tactics is conspicuous in the attacks made upon the Russian Petroleum Company and on the late president of the Illinois Central Railroad. We have more than once hinted that the Standard Oil financial *sbirri* were probably behind this attack, and it is curious to see how almost the only weapon used in both instances is mud—libel and slander. In America Mr. Fish is being plastered with the foulest mud his enemies can rake up, and the notorious "Boston Press Bureau" is being utilised to scatter it broadcast. Here mud without limit is also thrown at the directors of the Russian Petroleum Company. They are accused of filling their own pockets, of betraying the interests of the shareholders, of collusive dealing for the profit of some person or persons not specified, and alongside this there is dangled before the shareholders a promise of financial help to the extent of £100,000, just as in the States everything good is to flow from Standard Oil control of the Illinois Central. We echo the *Pall Mall Gazette* in wanting to know who is to provide this £100,000. Is it the Rockefeller gang, and will they find it in sovereigns? Really, it is about time this disgusting exhibition was stifled and put out of sight. If the stockholders do not support their board they will suffer; of that we have no doubt whatever.

Persian finances would seem to be in a bad way, and the new Parliament can hardly be expected in its inexperience to devise effective remedies. A *Times* correspondent at Teheran describes the financial situation as desperately threatening. There are foreign and domestic loans outstanding to the amount of £6,000,000, thanks to the extravagance of the late Sultan, and the total revenue of the State was only about £1,500,000 last year, while the expenditure was £800,000 more than that. A committee, however, which has been at work under the eye of the Finance Minister, has succeeded in balancing the budget for the present year by finding some increase in revenue and effecting some reduction in expenditure; but for all that the position is obviously precarious, and much

self-denial will be required to permanently restore the equilibrium. We hope, however, that Persia will succeed in increasing the revenue, and that her new statesmen will also diligently set themselves to reduce the public debt.

The Agent-General for New South Wales has sent us particulars of the earnings of the Government railways and tramways for the September quarter of this year. It forms a most satisfactory display. The railways show an increase of £153,226 over the corresponding quarter of the previous year and a total income of £1,207,845 on the 3,468 miles open. Expenditure increased by only £72,628, so that more than 50 per cent. of the gross income remained as nett. All sources of traffic contributed to the increase, coaching giving £23,000 and goods £130,226 more, but it was an accidental increase owing to the early season. Wool alone showed an increase of 80,165 bales at a total of 185,000 bales carried and agricultural traffic was also most satisfactory. On the tramways the quarter's revenue was £228,490, or an increase of £23,242 earned at an increase of £19,966 in the expenditure. No less than 39,000,000 passengers were carried on the 130 miles of tramways open, which are mostly worked by electricity. At the time the return was compiled a setback was looked for in spite of the permanent tendency to increase, because general conditions were not promising, a poor crop being in prospect.

We quite agree with a correspondent whose letter appears in another column that nobody ought to join any reconstruction scheme designed to prolong the existence of Clark's Consolidated, Limited. It appears to us that they would only be throwing good money after bad. No profit and loss account accompanies the balance-sheet, but it shows extreme poverty, since the company owes £32,329 on 6 per cent. debenture stock outstanding, plus accrued interest, as well as £25,676 on loans, &c., including directors' fees, since March 31, 1902. The amount of these fees is £3,625, and being entered on one side of the balance-sheet this item necessarily appears on the other, because the directors have not drawn the money. The cash available is only £971, and there does not appear to be any appreciable revenue coming in from any quarter except from rent and timber sales. Bullion only yielded £872 out of a total income of £4,847. It is better not to throw more money away in such an enterprise.

A final report has been issued by the liquidators of the Bradford Commercial Joint Stock Banking Co., Limited. Much of it is filled up with tables, whose meaning we cannot profess to fully understand, but the sum of the matter appears to be a deficiency of £64,000, equal to £5 per bank share. Most of the assets seem to have been handed over to the Knightsbridge and Bradford Estate Co., Limited, it presumably being created for the purpose of nursing and disposing of these assets, and in some respects the outturn seems to have been better than anticipated, but the loss is none the less considerable. At the date of the failure the entire paid-up share capital was £320,300, and £76,872 of this capital has been returned to the shareholders in cash, while one share £7 paid and £7 in debenture stock in the new company, or £14 in all, representing on 12,812 bank shares £179,368, have also been handed over, leaving the deficiency as above stated. Should the property taken over by the securities company yield well these paper payments may represent actual money to some amount, and they do apparently promise rather well, since they are fairly well let. So if this prosperity continues there will be a nett revenue sufficient to pay 4 per cent. per annum on the debenture stock and shares in the new company. The estate of A. Kellet and Sons, Limited, seems also to have yielded better than was originally estimated, and the disaster has consequently been less complete than was at one time feared.

Would it not be possible for defrauded policyholders in that loathsome imposture the Mutual Reserve Assurance Company of New York to bring the ex-directors of its defunct British branch to book? That they can hope to get anything from the American officials is not to be thought of. These have taken to their heels with all the money they could rake together, and now set the deluded policyholders at defiance. But there were some men of wealth and position who unwisely lent their names to the swindle on this side and thereby made it the easier for the enterprising American freebooters to lay hold of considerable plunder. Can they not be made to disgorge? The experiment would seem to be worth trying.

A suggestive reminder of what liability on bank shares may now and then come to mean is given in the final report of the liquidator of the National Bank of Wales, which failed in 1894, with liabilities of £1,700,000. In all £8 10s. per share has been called up by Mr. Dovey, the official liquidator, and of this only 20 per cent. of the last call of £3 10s. per share can now be returned to those shareholders who paid it in full. The shares were £30 nominal, with £10 paid up, and dividends of 7 per cent. had been paid almost up to the date of the stoppage, but as the bank had only lived for about 15 years this return could have contributed little or nothing towards enabling the shareholders to bear their loss on the original purchase, let alone the loss inflicted by the calls.

The Week in Mines.

The big Kaffir houses are determined to have a Christmas boom if it can possibly be managed, and are leaving no stone unturned in their efforts to prove the merits of South African gold mining and kindred shares. Every third man you meet in Throgmorton Street has something to say about the coming boom, and although he may not have the remotest notion of the real position and prospects or even the price of a great majority of shares, any one you choose to mention will be described as "dirt cheap." We believe it to be a fact that the public is paying just a little more attention to this section of the Stock Exchange, and it may be that if shares are picked with very great care, life, working costs, capital, price, controlling house, and all other necessary factors being taken into account, the purchase of a few, taken up and paid for, may turn out all right. We try to indicate, so far as possible, in our analysis of the various annual reports, what the prospects are, and think prospective purchasers will do best by giving attention only to the proved dividend-paying mines and not risk their money in unproved speculations merely because the shares appear low in price. As we pointed out the other day, it is a great fallacy to suppose that because the market price of a share is only equal to the cash holding that share is necessarily worth picking up. All the money may easily be spent and the mine turn out to be quite unpayable. This kind of thing has happened over and over again, and will happen many times yet. The buying during the past week was in small lots, 10 and 20 shares, and this must be considered a good sign, because such purchases are doubtless of the genuine ready-money sort, and must leave the market sounder and stronger. The chief danger to be feared is that a revival of public buying will encourage another wild outburst of speculation, and it need hardly be said that anything of the kind would prove disastrous to any permanent improvement, because the times are out of joint for gambling, and it must not be supposed that financial affairs have righted themselves, because banks are not toppling like ninepins all over the world. America is going to be a source of anxiety for a long time yet, and one must keep an eye on sundry Continental centres as well. It is a marvel how some of them have stood up so long. All things considered, this country has come through its recent trials amazingly well, but do not forget that the big Kaffir houses are stuffed to bursting point with shares, mostly carried on borrowed money, and that a substantial rise in prices will bring

them out in bales. There is plenty of wreckage about, too, the result of previous and readily forgotten slumps, the Bank rate is still 7 per cent., and money is bound to be dear for some time yet, perhaps for many months. A realisation of these facts now may be the means of preventing losses later on. We imagine, too, that most of the bears in the Kaffir Circus have now been eliminated, and this means the withdrawal of another supporting prop. The principal buying during the past week came from Paris, which absorbed quite a good quantity of shares, and Germany followed the lead in a more subdued fashion. The shops also assisted in a quiet way, so that from one cause or another prices were kept on the move very well. The advance was not uninterrupted, profit-taking, the Zulu trouble, and a mid-week setback in other departments bringing about reactions, but losses were usually recovered without much trouble, and on balance leading shares are a good deal better. Dividend talk was a helpful influence, and some of the payments this month are expected to be on a larger scale. One very encouraging point was a cable from the Robinson announcing working costs for November of only 14s. 7d. per ton, including cost of development. City and Suburbans are still a weak spot.

A few things in the Land and Finance group showed some hesitation, but an all-round rally took place in the middle of the week, and the section showed a readiness to come into line with Kaffirs. Gold Fields were prominent in the rise, and Anglo-French, Johnnies, T.C.L., Goerz, Gold Trusts, and other favourites showed up well. Rhodesians were harder to move, but a sudden rush for Chartereds took them almost to par, and Tanganyikas enjoyed a pretty good rise. Bankets did not move much, and Eldorados cannot be kept above 2. They went to 2⅛ at one time, but soon came back to the round figure. Among Diamond shares De Beers were rallied to over 17, and Premier to 8 9/16, but were not particularly strong, and very pessimistic forecasts of the De Beers dividend, due this month, are being made. Jagers were also lower, and New Vaals and Roberts Victors showed flatness.

West Africans could not be described as booming, but the Taquah and Abosso reports kept the shares of those companies steady, and Broomassies did not lose more than 1s. Nigeria Investments and Bitumen went up. The Egyptian market is still non-existent, but West Australians showed a disposition to go better. Good developments helped Golden Horse Shoes, and the annual report proved beneficial to Kalgurlis. Northern Blocks, Associated and Boulders likewise rallied, partly on colonial buying, and Oroyas recovered from early dulness. On the whole, the Broken Hill market was stronger, but is not really firm, and any rise, however small, usually brings in sellers. There is half a suspicion that lead is being manipulated for the purpose of depressing the shares. A few buying orders were received on colonial account, but the market is becoming very neglected, and quite a number of jobbers are said to be deserting this and the West Australian sections with the object of making their fortunes in Kaffirs.

Copper shares were fairly good at the start, but Paris soon came in a seller, and the metal relapsed, partly due to the publication of monthly statistics showing an increase of 3,061 tons in the visible supply. A rally followed, but there was another cut in America, and despite the heavily reduced production the demand is not nearly up to the supply. So quotations again eased off as a rule, but Spasskys were exceptionally good, and Lakes picked up. The best of Rio Tintos was 67⅜ and the worst 65½. Tin shares were mostly weak, the principal movements in the metal being downward, and a sharp relapse occurred in Pahangs to the accompaniment of many adverse rumours.

Miscellaneous things showed some activity, and a welcome incident was a further recovery in Indian shares, particularly Mysores. Alaska Treadwells advanced well, but other Americans, after picking up a trifle, eased off again. Siberians were steady, and New Zealands rather dull.

MINING NEWS.

*** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No puff or showpiece or advertisement should ever be responded to without first consulting the* Investors' Review.

Simmer and Jack East.—This stupendously capitalised deep level mining company, a Gold Fields offshoot, treated 431,874 tons of ore during the year ended July 31, which yielded 82,316 ozs., while 282,129 tons of sands gave 34,163 ozs., 149,705 tons of slimes 8,379 ozs. and 88 tons of by-products 823 ozs., the whole making up a total of 125,682 ozs., worth £528,883, or 24s. 5.909d. per ton crushed. Working costs came to £401,082 or 21s. 4.231d. per ton, leaving the profit on operations at £67,801 or 3s. 1.678d. per ton, hardly brilliant figures on a share capital of £650,000 and £900,000 of debentures. Sundry revenue was £6,207 making £74,008 in all, and as the total debenture charges ran away with the nice little sum of £54,7½, the balance remaining was £19,297, to be added to the sum brought in, making £35,708 in all. A poor look-out for the shareholders, truly, and it is highly discouraging to read in the acting superintendent's report of the dykes encountered in the Lohse incline shaft. These have retarded development to such an extent that it was decided to temporarily bring up 50 of the 250 stamps, these with the corresponding sand plant, &c., having been rented to the Knight's Deep Company since June 1. Reserve of milling ore at July 31 was only 609,800 tons of an average assay value of 6.5 dwts. per ton, not two years' supply, even with only 200 stamps in operation. Finally, just note that another £224,793 has been written off for depreciation on investments, making £296,006 altogether, and leaving them at £62,987, meaning a depreciation of over 80 per cent. The amount is taken from the reserve bringing it down from £309,275 to £13,269, and of the big figure £95,000 consisted of share premiums. And the present price of the share is 10s., at which they are not worth looking at.

Knights Deep.—As noted in the report of Simmer and Jack East, this company has leased 50 of the 250 stamps belonging to the latter concern, and since June 1 has had 200 in operation. The past year's results were only influenced to a small extent by this increased installation, as the financial period ends on July 31. It is, however, well worth noting that the working costs, which averaged 20s. 9.620d. in the period under review, were only 18s. 1.629d. for September last. Tons milled were 385,047 yielding 74,485 ozs., the tube mills gave 11,303 ozs., 278,839 tons of sands 40,030 ozs. and 106,208 tons of slimes 6,211 ozs. Concentrates gave 224 ozs. making 132,253 in all, which realised £557,815 or 28s. 11.686d. per ton. Working costs were £400,481 leaving a profit on working of £157,334 or 8s. 2.066d. per ton. Gold in reserve added in was worth £4,611 and sundry revenue was the considerable amount of £39,381, making a total of £201,326. Depreciation and profits tax accounted for £17,965 leaving £183,361. Balance at July 31 was £74,823, increasing the disposable sum to £258,185. From it two dividends of 5 per cent. each have been declared, a sum of £6,435 has been provided for additions and renewals to machinery plant and buildings, and £14,166 for debenture interest. Credit still left is £173,231, a very large sum, which enabled the chairman at the annual meeting to promise an increased dividend for the current year, with a prospect of it being continued in the future. Ore reserves are estimated at 761,620 tons of 7.3 dwt. quartz, and it is expected that an amount of about 40,000 tons will be milled per month in future.

Henderson's Transvaal Estates.—It is still impossible to say anything comforting to the shareholders of this important Transvaal enterprise, and without emphasising the unquestionably severe depression prevailing in the Transvaal during the period to June 30 last we may just note that the total revenue in the twelve months was £32,044 compared with £47,701, and after meeting outlays aggregating £21,386 the balance of profit is £10,658, a drop of £14,002. This goes on to the credit brought forward of £122,124, making a total to be carried out of £132,782. The directors, however, think it right to make provision to the extent of £64,469 for depreciation in stocks and shares standing in the balance-sheet at £449 678, and this sum will be transferred from reserve for the purpose, reducing it to £102,292. In the circumstances it is a little curious to read the auditors' remarks that these stocks and shares, including shares in subsidiary companies, are taken at or below cost, the market price of which at June 30 was in excess of the amount appearing in the balance-sheet. We take it that the "subsidiary companies" do not include the company's principal asset, the holding of 1,249,478 shares in the Henderson Consolidatd Corporation taken in at par, because if the market value was in excess of this figure why do Henderson's Transvaal £1 shares stand at little more than 5s. Other properties are valued at £276,043, and before leaving the balance-sheet it may be noted that the company is practically free of floating liabilities, and has cash and short loans to the amount of £69,826. Sundry debtors owe £62,886, but of these £51,551 consists of advances made to the Consolidated Corporation, a considerable portion of which has been expended on the development and equipment of the Tweefontein property. Work on this has been vigorously carried on, and the mine equipped for an output of 1,250 tons per day. It is expected that the colliery will be in working order by the

middle of the present month, and contracts for the sale of coal have already been secured as from February 1 next, including a considerable one from the Transvaal Railway administration. A separate company has been formed to acquire the property, and Henderson's Transvaal Company will have an opportunity of participating in an issue of 6 per cent. debenture stock, with right of conversion into shares. The report also refers to the Daggafontein Gold Mining Company, which seems to be getting good results from boring tests, and the Delagoa Bay Development Company, whose report has already been dealt with in our columns. Certain claims raised by the Government have delayed the completion of sales of the new stands at Boksburg North, but an arrangement has now been come to with the Government which will enable the sales to proceed. At Klipfontein the supply of water in the water shaft has now been proved to amount to 15 million gallons per month, and it is expected that this will ultimately become a source of considerable revenue. The company possesses interests in certain tin, copper and corundum properties, and maintains the policy referred to last year in the matter of prospecting operations. Agricultural prospects are spoken of hopefully, and a successful experimental planting of cotton has been made on one of the concessions in which the company is interested. Arrangements are being made for the renewal of the outstanding debentures, which mature on March 31.

CHARTERLAND GOLDFIELDS.—There was a bit of a row at the annual meeting of this unfortunate company on Monday last, and the ever energetic Mr. Percy Lindley, to whom Rhodesian mine shareholders owe so much, succeeded in getting a committee appointed to confer with the directors. The main complaints were the slow development of the Old Nick mine and of the diversion of the company's money to outside investments. Between 1902 and the present time, said Mr. Lindley, the company has lost no less than £100,000, but it is really much worse than that, the balance-sheet showing a debit to profit and loss of £133,197, or very nearly 40 per cent. of the capital. For the year to June 30 the deficiency was £9,364, after writing off £9,093 for depreciation on investments, and we should think there is a good deal of the same kind of thing still to be accomplished. What the directors have to say about the various interests possessed is not sufficiently important to call for repetition here, but it may be mentioned that, according to estimates made, the Old Nick mine would, with a capital expenditure of £70,000, produce profits of £3,000 per month, and with an outlay of £40,000 about £1,800 per month. But how is even the smaller sum to be provided in present circumstances and with Charterland Goldfields shares hardly saleable at a humble "bob" apiece?

MIDDLEBURG STEAM COAL AND COKE.—This Transvaal company has lately gone through the reconstruction process, and while several matters await adjustment, the directors say they are satisfied the capital will now be represented by the assets. We hope so. Competition seems to have been terrific during the year to June 30, and the labour supply has not been up to the mark, but it is better now, and with a steady average demand "it should be possible to ensure in future low working costs." Rivalry in the coal trade became so intense that a Coal Owners' Association became necessary with the object of obtaining a remunerative price for the product. This association commenced operations on July 1 last, and ought to have a beneficial result upon the trade, because no good can come from that sort of competition which entails working at a loss. Coal sales and transfer fees were £47,130, all but £5,929 of which went in expenses. Debenture and loan interest and directors' fees took another £1,040, and preference dividend £3,250, leaving £1,039 at the credit of profit and loss. All development in the year was charged against revenue, and throughout the whole the seam of coal retained its thickness, while the quality was fully up to the high standard hitherto maintained. Considerable progress has been made in developing a bunkering trade at Delagoa Bay, and the directors "feel that the company has now every prospect of a prosperous and remunerative career." It is thought that the Van de Merve's claims provide a hopeful prospect.

CAPE COPPER.—During the year ended April 30 in the colony and August 31 in London and Newfoundland this company's profit was £379,910, and to it is added £200,636 brought forward, making £640,546 in all. Income and colonial tax took £20,890, and the dividend paid on January 1 last, being the final on account of 1906, £241,500. An interim dividend of 5s. per share in respect of the period under review absorbed £80,250, a sum of £7,000 is put to investment suspense account, £20,000 to reserve fund, and £5,000 to Nababeep sinking fund, leaving £259,907. From that the directors propose a final dividend of 14s. per share, making 19s. for the year on both preference and ordinary shares, leaving an undivided credit of about £18,400. Returns from the O'okiep mine were 11,827 nett dry tons of 17.4 per cent. wet assay, a decrease of 3,204 tons compared with the quantity obtained in the previous year. Reserves of ore are estimated at 12,000 tons calculated on a basis of 20 per cent. against 6,000 tons of 21 per cent. at the close of the previous year. The Nababeep South mine gave 51,507 tons of 4.7 per cent. wet assay, a slight decrease in amount against the preceding twelve months. Ore reserves are put at 180,000 tons of 5 per cent. wet assay, an increase of 20,000 tons in quantity and a decrease of 1 per cent. in contents. From the Nababeep North mine 2,092 tons assaying 5.30 per cent. copper were extracted and smelted at the local smelting works, and the present returns from this mine, which average 400 tons per month, are included in the output from the Nababeep mine shown in the monthly reports issued to the shareholders. Exploratory work has been proceeded with upon the three properties in America referred to in the last annual report, and also upon the property in India. Some of these have presented encouraging features, but the developments are not sufficiently advanced for any definite opinion to be formed upon them. Last year's profit was the largest in the history of the company, and the financial position is very sound.

CONSOLIDATED AFRICAN COPPER TRUST.—This company's report and accounts for the year ended June 30 show an issued capital of £484,000, out of a total of £600,000, but since then 50,000 of the reserve shares have been issued as 7 per cent. cumulative preference shares of £1 each, and on these 7s. per share has been called up. The principal object of the preference issue was to provide the working capital for the Edmundian Copper Mining Company, a concern formed with a capital of £135,000 to purchase the Edmundian claims from the Consolidated Company for £100,000, payable as to £85,000 in fully-paid shares and the balance in cash or shares. The preference shares mentioned carry the right of conversion, at any time into ordinary shares at par, and holders have an option to purchase one Edmundian Copper share for each share possessed up to August 15, 1910. If the preference holders do not come up to the scratch with their Coppers in exchange for shares the parent company will have to take them at the end of the option period to the extent of £15,000 for balance of purchase money, as mentioned, and £35,000 on account of capital to be advanced. The Edmundian is at present carrying on development work at the 7 ft. level of the mine, and it is said that a good body of ore is being opened up, which should materially add to the reserves. In referring to the treatment plant, the engineers speak of the necessity of adopting the most efficient process, and at the date of their report were carrying out further tests. These have now been successfully completed, and the necessary plant ordered. It is expected that by the end of June, 1908, smelting operations at the mine will have commenced. At the Umkondo mine the operations carried on during the year are satisfactory, and enable the tonnage previously calculated as "possible" to be included as "probable" ore. The "possible" tonnage at September 30, 1905, was estimated at 38,427 tons, and the "probable" or prospective tonnage at 43,470 tons of an average value of 8.5 per cent. copper. Nett expenditure to date on the Edmundian mine is £26,638 on Alaska mine £13,012, and on the Umkondo £30,061. Administration has cost £9,163 and the cash and loans amount to £3,797.

TAQUAH AND ABOSSO GOLD MINING.—The annual report of this undertaking for the year ended June 30 and of the allied company, the Abosso Gold Mining Company, have been awaited with more than usual interest, because these two are certainly in the front rank of West African Gold Mines. Considerable progress has been made in developing the Taquah mine, and in erecting the new plant, and shareholders are to be congratulated on the successful start of this mill since the close of the financial year. Development work aggregated 3,615 ft., and the ore reserves were increased by 93,933 tons, making a total of 224,839 tons, of which 108,350 tons are of an average value of 23.27 dwts. The remaining 116,489 tons situated near the surface in the south-western part of the mine will not be treated for the present. The old ten-stamp mill worked throughout the year, and crushed 7,131 tons of ore taken from the dump, and from development work, while 2,832 tons of the tailings and 4,515 tons of old tailings were also treated by cyanide. Total production was 9,215 ozs., worth £39,107, the cost of treating the ore and tailings being only £6,780. Part of the new plant was started during August, and the returns from the plates alone to October 31 were 10,021 tons for 5,832 ozs., valued at £24,047. The cyanide plant being now at work will augment the return for November, and the whole equipment is gradually being brought into operation, so that it will probably be working to its full extent before the end of the present month. The general manager is clearly very much impressed with the company's prospects, as he recommends without delay the instalment of another 50-stamp mill and the necessary increase in the plant in other directions. His scheme for the more extended operations so as to open up the mine at a much greater rate than hitherto includes the sinking of one or two more shafts to the north or south (or both) of the present main shaft, with an aerial ropeway to deliver the rock raised at the mills. The moment has not yet arrived for the issue of a profit and loss account, but it is certainly good to find that the receipts for the year, which amounted to £48,089, including a 10 per cent. dividend or £14,000 paid by the Abosso Gold were sufficient to provide all general expenditure since the formation of the company and leave a credit of £3,010. Thus the company starts with a clear sheet in that respect, although we note that loans to the amount of about £40,000 have been raised. In addition to the Taquah mine the company possesses numerous other interests, and since the similarity of the name with that of the Abosso company has created some confusion, it is proposed to alter the name of the company to the Taquah Mining and Exploration Company.

ABOSSO GOLD MINING COMPANY.—An unfortunate accident, notified at the time to the shareholders, occurred in this company's mine last December, and for some time the lower workings were under water, meaning that operations could not be properly resumed for some time. Returns for December to February in particular were adversely affected. However, the company crushed 30,881 tons compared with 44,704 tons in the previous year, the yield being 20,347 ozs. against 35,689 ozs., meaning a falling off in the yield from 15 dwts. to 14 32 dwts., a rather serious decline. Total expenditure at the mine and in England, including maintenance of the plant and machinery and provision for the redemption of development costs, averages

38s. 3.1d. per ton, which is high. Costs in December and January were quite abnormal, but for the remaining ten months of the year the average was 35s. 8.3d. per ton and in June the cost was reduced to 33s. 2.2d. Reductions are still being effected, and further improvement is expected, apart from the automatic drop that will occur when the 50 stamps are working and the standing charges are distributed over a larger tonnage. This should happen by the end of the present month, and the capacity of the mill will then be about 6,000 tons per month. During the past year 80,256 tons were fully developed and 34,000 tons partially developed, and after deducting the quantity crushed last twelve months there remain 187,831 tons in sight, the average assay value being 17.25 dwts. per ton. This reserve is equivalent to two and a half years' supply for a 50-stamp mill. It is intended to continue development on the same scale as hitherto, and the general manager is confident that the reserves will be again largely augmented during the year. Total revenue on gold account for the twelve months was £116,757 and the profit £32,723, while £21,186 was brought in making £53,909 in all. Out of that the directors propose a dividend of 10 per cent. absorbing £34,951 and leaving £18,959 to be carried forward.

Kalgurli Gold Mines.—This company's operations for the year ended July 31 were again attended with marked success, although the grade of ore was not quite equal to that of the preceding twelve months. Quantity treated was 120,150 tons, yielding 84,076 ozs., equal to 14 dwts. or 59s. 5.37d. per ton as compared with 112,808 tons producing 82,513 ozs. for the previous year, averaging 14.60 dwts. On the other hand, treatment costs, including administration and general expenses, were 12s. 6.70d. against 13s. 10.59d. being a reduction of 1s. 3.83d. The general manager had hoped to treat 132,000 tons, but owing to the necessity of removing the mill engine and erecting a much larger one in its place the tonnage showed considerable decrease from April to July inclusive. However, the tonnage to be handled during the current year will, it is hoped, reach 132,000 and a further reduction in working costs is looked for. Value of the output for the past year was £354,539 and other items gave £2,317, making a total of £356,856. Nett profit was £165,117, and the balance-sheet shows that £104,890 was brought in from the previous account, making £270,008 in all. Of that £210,000 has been distributed in dividends during the year, equal to 175 per cent. on the capital of £120,000, and an interim dividend for the year 1907-8 was paid on October 7 last, while a further 7s. 6d. is proposed, payable on January 6 next. Ore reserves are estimated at approximately 650,000 tons of an average value of 56s. per ton, the quantity being the same as last year, and the value about 4s. less. But as the general manager points out with the increased tonnage and decreased cost it is profitable to treat ore that was formerly just outside the payable limit, the effect of which is, of course, to slightly reduce the average grade of the estimated reserves.

Australian Smelting Corporation.—Before proceeding to pass a few remarks upon the report of this undertaking, made up to May 31 last, it is necessary to remark that it arose out of the lamentable failure of the concern known as the Smelting and Refining Company of Australia. We have neither the space nor the inclination to go over the history of that affair, it is best forgotten if possible, and in any case there is quite enough in the present position to occupy the mind. When the new company was formed with a capital of £350,000, of which £140,000 has been applied for and allotted, the debenture-holders of the Smelting and Refining were in possession of the property. The first thing was to regain control, and holders to the amount of £87,000 out of £100,000 took Australian Smelting debentures in exchange, but the remaining £13,000 declined to do the same. Heavy legal proceedings followed, and the result was the purchase of this debenture stock for £10,700, which was good for the holders. But just note that the entire costs incurred, including those of the debenture-holders' action were £5,700, so that a nice penny was dropped on this tussle. The next thing was the removal of the smelter to the seaboard, the New South Wales Government undertaking to build a jetty for the company's use at a cost of £15,000 to £20,000, the company paying an annual rental of £1,600 to £2,100, based upon the actial cost of construction. Another concern may share the use of the jetty and contribute to the rent. The delay caused by the legal proceedings mentioned, and by the negotiations with the Government, prevented active constructive work being undertaken until January last. However, arrangements have been made with the New South Wales Railway Commissioners for siding connections from their line to the company's works and jetty, and a smelter of the most modern design is being erected at Port Kembla, with every device for the economical handling of the lead concentrates from Broken Hill and such Customs oils as the company may purchase. But, unhappily, further financial difficulties have already arisen, although the report and accounts now to hand are the first of the new company, "and further funds will be required to complete the erection of the smelting works and to finance the purchase of concentrates and Customs ores." "The directors have for some time been in active negotiation with a view to the provision of further funds, and they hope to be in a position at an early date to lay their proposals before the shareholders." Among the sums which the company has had to pay out may be mentioned £17,500 to the ever active Share Guarantee Trust, £17,812 to Dalgety and Co. in settlement of a claim against the Smelting and Refining Company, £1,200 for preliminary and formation expenses, and £16,400 for debenture-holders, as mentioned. Calls are in arrear to the amount of £22,700, but at the date of the balance-sheet the company had £22,091 in cash, and we suppose most of this is already spent.

Merton's Reward Gold Mining.—The report of the directors for the period to June 30 last consists of just a dozen lines, and of these five relate to the actual operations. We can afford to be equally brief, because it is useless to occupy space over such a miserable affair. Gold to the amount of 3,822 ozs., valued at £15,904, was recovered, and £751 was received from other sources, a total of £16,655. But mine expenses alone took £16,096, maintenance, management, &c., was £3,998, depreciation £2,731, and London expenses £1,271. In addition the directors see fit to write off all development expenditure to date, amounting to £17,620, so that the already serious deficiency of £18,499 is raised to the formidable sum of £43,559. Development during the year was extremely disappointing, and owing to the irregular nature of the ore bodies and the variable manner in which the gold contents are distributed, no estimate of ore reserve is attempted, but the manager says that since the middle of May the mine has been paying its way.

Mysore West and Mysore Wynaad Gold.—A circular to this company's shareholders states that, in accordance with the programme laid down in the circular of July 1 last, development work has been stopped at the Tank Block mine. Mining and milling operations ceased after stoping and treating the payable quartz in sight. A considerable amount of gold was obtained from this high-grade ore and from scraping the plates, and cyaniding operations will be continued until the large accumulations of tailings have been completed. Prospecting for a new mining property is proceeding, and the directors hope that before long they may be able to submit a definite proposal to the shareholders. A portion of the machinery at Tank Block has been rented as it stands for use by the adjoining Nundydroog company. The combined financial resources of the two companies are now approximately as follows:—Cash, £9,600; readily saleable high-class securities, at current prices, £11,000; uncalled capital £12,000; and unissued shares, which could be issued preferentially, £38,000 nominal.

Letters to the Editor.

DOUBLE COMMISSIONS.

Sir,—Among the various arguments that have been brought forward for and against the practice, which has now been sanctioned by the Stock Exchange Committee, of a broker charging a commission to both clients where one sells and the other buys, the question of the contract itself seems to have escaped notice. To make the ground perfectly clear it may be said that the transaction is as above, one that is carried out by a broker between two clients without the intervention of a member of the Stock Exchange. Whether one of these clients be a finance house or "shop" doesn't in any way affect the case. It is only reasonable that both should pay a commission, and the suggestion, as once made, that each should pay half commission, is farcical, where there is no fixed scale of commission, and any amount is, therefore, a half or a whole quite arbitrarily. But the contract note issued is the same as when a bargain is made with a member of the Stock Exchange, with the addition, as now directed, of a notification that the other party is a non-member, and is paying a commission. It is the same; that is, it states that it is issued subject to the Rules and Regulations of the Stock Exchange. It does not, however, and cannot give the advantage of the machinery of the Stock Exchange—without going into the controversial point as to whether the security is greater or less.

First, the bargain cannot be marked. That is, no official notification of the price can be recorded in the official list. And, secondly, it cannot be enforced or, perhaps, more correctly, no remedy for default can be exercised by means of the buying-in and selling-out department. The broker would naturally in due course issue the name of the buyer, and send a transfer for signature to the seller, and probably pay or credit the seller with the proceeds, even if he were not put in funds by his buying client, but he is under no compulsion to do this. He is an agent, and if the sum were a large one he might claim to be excused. If this occurred the seller could not "sell out" for a name. He could do nothing but have recourse to the law, with all its delays. The simple, cheap, and expeditious remedy provided by the Stock Exchange is denied him. He would have to sell elsewhere, and sue for the damages sustained. Conversely the buyer, if he required the stock, and it were not delivered by the broker on behalf of his selling client would have to buy elsewhere, and sue in his turn. In the latter case the broker could not without taking the client's place, and

either lending himself or borrowing the shares, supply the buyer.

If, then, the contract, issued by a member of the Stock Exchange, does not give the facilities of the Stock Exchange, but no more than is given by an outside broker's contract, if as much, would it not be better for the public to insist that their orders were executed in the Stock Exchange with the knowledge that, in the event of everything not going quite as it should, clients have a responsible body to deal with, who provide a remedy at small cost? For it must not be forgotten that the commission a broker receives does not bind him to do more than tender for delivery what he is provided with by his principal and ask for payment, or pay for purchases when funds are provided for that purpose.

I am, Yours, &c.,
A MEMBER.

ANGLO-BELGIAN COMPANY OF EGYPT.

DEAR SIR,—I beg to draw your attention to the accompanying report of the Anglo-Belgian Company of Egypt, which, I think, deserves some notice, as the exceedingly meagre information by the chairman in the meeting on Thursday does not touch on these points.

The first point to mention is the enormous amount of preliminary expenses of £28,000 and odd. This must include a very heavy amount of underwriting which ought to have been unnecessary, as the company started in the time of the big Egyptian boom.

The amount of expenses in Cairo is perhaps not excessive, though quite large enough, but when we come to the £6,000 for London expenses, surely something ought to be said. Does that amount include expenses of people engaged in the business, their wives, cousins and aunts staying for weeks at the Savoy Hotel and entertaining lavishly? A company that does not pay dividends ought not to indulge in that sort of luxuries. Where has the money gone?

Even worse, however, is the question of the Fayoum railway. It is evident that this railway, which constitutes the biggest asset of the company, was bought at par, and its debts taken over when it was in a rotten, if not even bankrupt condition, and when it was quite evident that it could have been bought at an infinitely lower figure. Is this not rather curious?

The company was supposed to make enormous profits. One deal alone was supposed to have given a profit of about £60,000, or enough to pay a dividend of 20 per cent. This was actually published in the Cairo papers at the time, as originating from the managing director. All these beautiful profits seem to have vanished, however, leaving nothing behind except the real and very substantial expenditure and the Fayoum railway, which, if the sanguine expectations of the chairman are realised, will give a return of 3 to 4 per cent. per annum, all to be swallowed up by the liberal expenditure of the directors and those belonging to them. A very poor look-out after all this blowing of trumpets.

I am, dear Sir,
Yours sincerely,
A SHAREHOLDER.

London, December 2, 1907.

CLARK'S CONSOLIDATED, LIMITED.

DEAR SIR,—I enclose the balance-sheet of this derelict Rhodesian concern, which for the second time in its useless existence invites its shareholders to make further sacrifices. From the figures you will see that the company owes nearly £60,000. Its assets are of a purely speculative value, and of an entirely unrealisable character. I earnestly hope that you will point out the futility of joining the new company to the unfortunate country shareholders.

The directors' proposals were defeated at the meeting held on 2nd inst., and they have demanded a poll.

No notice of the meeting has appeared in the Press to inform shareholders of what took place. The chairman, Lord Westbury, said that the company had been approached with a view to pooling its holding of 12,000 Battlefield shares.

The writer denounced such a scandalous proceeding as a barefaced intention to rig the market, and inflict loss on future unfortunate shareholders throughout the country. What faith can shareholders have in a board that for a year and a-half has daily broken the law of the land under Sections 26 and 49 of the Companies Act, 1862?

I am, dear Sir,
Your obedient servant,
SHAREHOLDER.

Middle Temple Lane, E.C. December 3, 1907.

PARR'S BANK.—Liabilities on current and deposit accounts, &c., on November 28 amounted to £28,777,081, and on drafts current, acceptances on behalf of customers, &c., to £3,069,939, against which cash in hand and at Bank of England stood at £4,545,238, money at call and short notice £7,538,910, Government and other first class securities £3,446,558, bills of exchange £2,390,423, and loans and advances to customers £13,982,028.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1907, and November 30, 1907:—

The Investors' Review.

The Week's Money Market.

BANK RATE 7 PER CENT. (Raised from 5½ per cent. to 6 per cent. on Monday, November 4, and from 6 per cent. to 7 per cent. on Thursday, November 7.)

Norfolk House, Friday Evening.

Our money market seems to have lost its bearings a little this week. A prepossession seized it that the Bank rate must come down, and it proceeded to cut discount rates as if this favourable change had been a certainty. Gold was coming in freely, it was urged, and the American demand had ceased; therefore the Bank of England could not remain at 7 per cent. The temptation to drive rates down was strengthened by the comparative cheapness of money, which has remained at 5 to 5¼ per cent. with very little variation since we last wrote. Accordingly by the middle of the week the rate on three months' remitted bills had been brought down to little better than 5½ per cent., and business was done at that figure or little more on Wednesday morning. In the afternoon, however, the more prudent among the bill brokers began to fear that a miscalculation had been made, and strove to put their rates up, but even on Thursday, when the Bank Court met and separated without making any change in the official minimum, the best quotation for threes was only 5⅞, and sellers declared that they had been able to do business at 5 11/16 to ¾ per cent. The six months' rate has gone down even more unpleasantly to 4¾ per cent. as the fine rate, but business was also done at 5 per cent. These quotations were adhered to this morning, and the firmness of the market has been helped by a full supply of bills. Towards the close, however, the Indian gold brought flabbiness once more, and seven-day money shrunk to 5 per cent. or less, over-night loans being down to 4-4½ per cent.

It is natural enough that the market should behave in this way, but we cannot think it prudent. Just because the Bank has drawn in from the Continent, principally from Germany, rather more than £1,000,000 in gold, it was surely short-sighted to conclude that the worst was over. A 7 per cent. rate can be trusted to pull the metal out of every nick and corner where it lies hidden, and if it were kept effective a little longer enough might be secured in this way to put the market at its ease, both through what it drew and what it keeps from going, and even when confronted by other export demands in the end of the year or beginning of 1908. But to cut open market rates away in the manner described is to destroy the efficiency of the 7 per cent. Bank rate and open the door to withdrawals of the metal by many countries besides the United States. We have received altogether nearly £1,200,000 in German gold coin, but Germany is not able to spare this gold. The return of the Imperial Bank issued in the beginning of this week was the worst seen for many a day. It was more unfavourable by £8,150,000 than the return at the corresponding date of last year. It showed a loss of £2,725,000 in specie, and the total stock of that metal is now down to £33,925,000. This is all the Bank holds against a note circulation of £75,544,150. Within the period embraced by the return, in other words, while notes went up to this extent, bullion went down, and the consequence is that the note circulation is now £13,091,300 above the legal minimum, or an increase of £5,467,000 on the week. A position such as these figures reveal warns us to look for gold demands on German account at no distant day, and it is probable enough that the German coin received by the Bank during its week was the product of finance operations in Russian interests, and not a consequence of the Bank of England's 7 per cent. rate attractive power. Be this as it may, a continuance of exports of gold by Germany must free the Reichsbank to put its rate up probably enough to 8½ or 9 per cent. Then we should have to follow.

Equally unable is the Bank of France to render further assistance. It has not lost much gold on the week, less than £200,000, in fact, but its note circulation has risen more than £3,500,000, and we cannot expect it to continue to ship gold to the States or to London with the end-of-the-year home demands so close at hand. But worse than all, immediately discount rates slipped back in our open market the American demands for gold revived, and led to hunting around in the open market for supplies not to be found there. Yesterday the price of bars jumped 1 3/8d. to 77s. 11½d. per oz., and if this price does not bring out private stocks of the metal the stock of the Bank of England will probably again have to be applied to, because banks in the States continue to fail, so that the probable consequence of this week's slackening in market rates is a renewal of the recent flurry. And ahead lies the gold requirements of Argentina, not to speak of further demands from Egypt. The Egyptian demand will be met from India and Australia, we are assured, and India has to-day set free another £1,000,000 of its hoard to help the London market. Too much reliance, however, must not be put upon helps of this kind, and the duty of credit jobbers is to keep the market firm as far as in them lies. If they neglect this duty the Bank of England may be compelled to step in and sweep away the surplus balances which keep short loan rates down in the open market; and it will not have to borrow so very largely to do this, for the total of the Other Deposits, although up £1,286,000 on the week, is still only £44,295,000, or £689,000 less than that of a year ago, when the Bank rate was 6 per cent. And it is thus high merely because of the Treasury disbursements at the end of the month, which have reduced Public Deposits by £2,235,000. Very little of the £1,004,000 in gold received from abroad was added to the Banking Reserve. It, indeed, is up only £124,000, because £490,000 in coin and £390,000 in notes went into the active circulation in the course of the week. Some movement of this kind occurs at the beginning of each month, and generally speaking the currency drifts back again between times, but it does not usually come back much in December, and before that month ends a fresh drain arises, so that if the Bank of England were now to take £1,500,000 away from the open market it would be badly embarrassed. As it is, one cannot help being afraid of the position of some of the weaker discount houses. They must be in the way to realise disturbing losses as the result of their recent enterprise.

The Japanese Government agents were said to be lending balances into January and February this morning at 5 per cent., and that was all the India Council's broker got on some renewals for a month.

Next week's gold movement cannot be forecast with certainty. It might be a week of surprises, and the more likely because the known open market supply will only be about £480,000. For this competition will be keen, as the price of bars is hard at the above-quoted price. To-day's gold movements would have been unimportant but for the release of Indian gold, which gave a nett influx of £1,293,000 for the day.

Calls next week are quite trifling until we reach Friday, when £1,032,000 becomes payable on Argentine new 5 per cent. bonds.

SILVER.

The market for bars has been very quiet, but fairly steady, this week, without a great deal of business offering. Fluctuations from day to day never exceeded $\frac{1}{16}$d., but prices, after dipping to 26$\frac{3}{4}$d. and 26$\frac{13}{16}$d. per oz., crept up to 26$\frac{7}{8}$d. and 27$\frac{1}{16}$d. on a moderate inquiry from the bazaars. They fell back again, however, immediately the demand ceased, and closed to-night weak at 26$\frac{7}{16}$d. per oz. for cash and 26$\frac{13}{16}$d. per oz. for delivery two months forward. Applications for the Rs. 20,00,000 of India Council drafts on Wednesday were again small, and amounted to no more than Rs. 9,80,000 all in bills. Of these Rs. 7,80,000 were allotted, tenders at 1s. 3 29-32d. receiving in full. Next week another Rs. 20,00,000 will be offered.

BANK OF ENGLAND.

AN ACCOUNT pursuant to the Act 7 and 8 Vict cap. 32, for the Week ending on Wednesday, December 4, 1907.

The Stock Markets.

A week of speculation, of hustling has been experienced on the Stock Exchange, and has brought about a welcome recovery in prices. Wise people should accept this change as a welcome opportunity to clear out of stocks they have been clinging to more or less in despair. This advice applies to all kinds of securities that are in the least degree speculative, and, above all, to American Railroad shares. We insist upon it the more earnestly because of the temper shown by the great majority of those who interest themselves in stocks of this class. We are amazed at the extent to which the habit of buying for the rise has eaten into the moral fibre of the monied classes. Mere investment seems to be no longer the object with anybody. All are continually on the watch for a chance to make something by an advance in prices, and ill-founded and transitory as the present recovery in prices must be, it has excited the cupidity of the multitude to an extraordinary extent. Brokers find their clients rushing forward to purchase at the top of the market as usual, and when one witnesses this kind of folly one ceases to wonder at the persistence with which the great players of Wall Street appear to ignore facts. It is nothing to them that all the banks in the Republic may have more or less stopped payment if they can only help each other in catching "bears," in lifting prices so as to attract the multitude of the thoughtless. They make money whoever else loses it, and if they could only unload their bales of waste paper on Europe they might be able to hold on to the produce of the country, and allow European investors and speculators to pay for the gold imported, not by them, be it noted, but by the great international Jewish houses.

Business has been feverish this week, and our own stocks have shared in the advance because of the prevailing belief that the Bank of England rate was about to come down, the crisis being at an end. No single circumstance has changed appreciably for the better, but that does not matter if the multitude can only be persuaded that an improvement has come. Cheap money next year is the watchword of the optimists, and they were fully persuaded in the beginning of the week that Thursday would bring a 6 per cent. Bank rate. Many went so far as to predict a 5 per cent. rate before Christmas. We doubt very much whether the 7 per cent. rate will be altered this year, and feel certain that if it should be reduced before that it will be the signal for renewed troubles in many directions, because exports of gold are almost certain to be renewed. There-

fore, this is the time to realise—not to sell "bears"; we never advise anybody to do that. It is the business of the market habitué to "go short" of stocks, not of the public at large, whose contact with markets cannot possibly be intimate, and whose touch is rarely or ever sure. Clear out on the advance everything speculative now held, and wait.

Trustee Securities.

A long and welcome array of higher prices greets us under British Funds and Colonial inscribed stocks, as well as in the issues of the London County Council and Metropolitan Water Board. Provincial Corporation securities have not answered so readily to the call of the optimist, but where they have moved they are higher. Consols have risen from 22s. 6d. to 27s. 6d., as the quotation is for cash or for the January account, and seeing that the price is now xd. dealings at 83¼ are most cheering. The "bulls" of the stock had to pay 6 per cent. for their money as a rule, and some of them more, but with the dream of cheap money haunting the market high rates counted for nothing. India stocks went up with the rest, and improvements of 1 to 1½ were more numerous than for a long time past in all the Imperial assortment, as it may be called. Many Colonial stocks were also ½ to 1 better, although business in them remains insignificant. But the market will not welcome new loans offered by any one of them, and the new Cape Colony issue has not had a very favourable reception.

Foreign Government Stocks.

Foreign Government stocks were also generally higher, and Paris continues to be the centre of a well-organised play for the rise in Russian bonds. The scrip of the English loan has not advanced much further this week, but several of the older loans are 2 or more up and the old sterling loan of 1822 is again at par. Japanese bonds have also been firm enough and gains have been secured in Argentine and Brazilian, but the Chilian list shows a falling off, partly due to nervousness, as the selling has never been important. German Three per Cents. and Prussian Consols are still depressed on the exceedingly strained position of the Berlin money market, but French Rente has rather gained than lost on the week, and the list altogether has rather a buoyant appearance, the largest decline being 1½ in Chilian 1886 and other issues, and the largest improvements 2½ to 3½ in Costa Rica bonds and Russian Five per Cents. of 1822.

Home Railway Stocks.

Gains are fairly general in this group, and have been substantial in Brighton ordinary and deferred, Great Northern deferred, South-Eastern and South-Western ordinary and deferred, North British deferred and Central London ordinary, this last having risen 4 and the others 1½ to 2½. The terms of agreement between the Great Northern and Great Central companies indicates, as predicted, a fusion similar to that between the South-Eastern and Chatham companies, and not a mere cessation of conflict where lines directly compete. Caledonian deferred stock shows a fair improvement, but Great Western, Great Eastern, and North-Eastern are all somewhat weaker. Metropolitan stock was also a fraction better, but Furness stock was again flat. Meantime, the week's gain in traffic receipts has fallen to £19,860, according to the *Railway News*, and before long we shall have decreases. Preferences were supported and in some demand by investors, so that the changes were all for the better, and speculators have been making a dive at Great Central preferences of 1891 and 1894, with the result that they are both about 14 up on the week. North British lower preference have also risen 2, and the preferences of the Chatham Company are 3 to 5 higher, all pure speculation based on "cheap money" coming soon. Underground Electric profit-sharing notes were yesterday quoted at 37 per cent. xd. for the £1,000 and £500 issues, but smaller notes closed at 39 xd.

Indian and Colonial Railways.

Any change in the Indian Railway list has been to the good although business is very languid in them all. "Bulls" have had it quite their own way in Canadian Pacific shares, which are $7 higher than they were a week ago, and dealings continue as furious as ever, with a growing confidence on the part of holders that prices are going higher. This is the opportunity for those who have been wanting to sell to clear out, for the Canadian crisis is no more at an end than the Yankee one. It cannot be said to have begun yet. Grand Trunk stocks have not been so elastic because much less dealt in, but the company's 4 per cent. debenture stock is up 30s. and in steady investment demand. Nothing of consequence has happened to Rhodesian Railway bonds, and other Colonial railway stocks are altogether neglected.

United States Railroad Shares.

Such a stirring of the dry bones has taken place in this section as nobody could have thought possible with the business finances of the Republic in their present unrelieved confusion, but just because nobody is called upon over there to pay in hard cash, or, at any rate, no masters of banks and trusts, it has been comparatively easy to initiate and carry on a daring gamble for the rise in New York. The players have also been helped by the extent of the bear account open, and they have made the most of their opportunities by driving up prices dollars at a time. On the week the show of gains is remarkable enough, but not quite so striking as the daily sensational reports would have led one to suppose. The highest advance of all is $10½ in Northern Pacific shares, but Southern preferred have risen $6, and Milwaukees, Readings, and Unions $5 each. Everything, in fact, is better, and a gain of $1 or $2 is rather despised by the eager players. Erie preferred, for instance, are up $4, and so are Atchison preferred, the only decline in all the list being in Baltimore preferred, which appears to have been overlooked for some reason or other. Bonds have naturally shared in this upheaval, and advances of $1 to $3 are quite common among them. Indeed, poorly secured issues like the first consolidated 4 per cents of the Norfolk and Western Company and Erie general lien bonds have been driven up $5 or more on the week. Most of this rise is engineered from Wall Street, if not the whole of it, but the public here does nibble, and would buy faster if it got the least encouragement. It should wait a bit, because, although many of these bonds are excellent investments, they are going to be cheaper before the fruits of the crisis are all reaped. Mr. Harriman is boasting that business is "on the up-grade again," and announces that 0,000 men have already been reinstated on the Union Pacific system. That is a bad sign. And, after all, the efforts of the "bulls" have been facilitated much by the obliging Mr. Roosevelt. He has, at Mr. Pierpont Morgan's instance, provided them with paper money in tens of millions, and with that in hand they can "load up" with stocks at will, and play at cornering the market with impunity. If "bulls" of our railway stocks could go to Sir Henry Campbell-Bannerman and say, "Look here! we shall go bankrupt if you do not give us an 'elastic' currency, say £20,000,000 more paper money just to go on with," and if he could comply by an order on the printer, how easy it would be to send North-Western stock to 200 again, and "little Chathams" to 40! All the public would have to do in such an event would be to take good care not to let the engineers of the rise have its gold for their paper, and that is just what we have to do with this latest display of the Yankees' style of "playing hell with the 'bears.'"

Foreign Railways.

A ragged kind of business has gone on in Foreign Railway securities, and the market for the Argentine group has been slow, with, however, a more pronounced upward tendency. The securities of the North-Eastern Company are indeed distinctly better, all except the

"A" certificates, but there has not been any conspicuous rise even in the best known. Still, the Great Southern, Pacific, Rosario and Buenos Ayres Western common stocks are all £1 up and Rosario deferred is £3 better on the week. Some of the minor stocks have also benefited, notably Cordoba and Rosario first and second preference stocks. For all that, dealings have been very intermittent and more of an investment than a speculative kind, which is well. An organised drive has been applied to Mexican Railway ordinary stock this week, and it and the preferences have been lifted from 2 to 4. There is no particular reason for this, but the market must employ itself somewhere, and dealers are always looking around for a security which seems out of the running and arrange to stir it up. The wise sell on such provocations. Antofagasta stocks continue weak and are difficult to deal in. The deferred yesterday touched 105½. Brazilian Railways, on the other hand, are buoyant; at any rate, San Paulo stock has risen 9 on the week, and the debenture stock of the Leopoldina Company is also better. United Railways of the Havana ordinary stock has likewise attracted some attention, and has accordingly risen 3.

Banks, Breweries and Docks.

Fewer changes are noticeable amongst Bank shares this week, and the only prominent movement has been advances of 6 to 7½ in the old and new shares of the Hongkong and Shanghai Bank, business in which has been unusually active. Other prices have improved a little where they show any movement with hardly an exception, but the gain is as a rule only fractional, and German Bank of London, Imperial Bank of Persia and National Bank of South Africa shares are all down a little. Among Brewery securities the changes are the reverse of cheerful. Watney, Combe's preference stock was dealt in yesterday at 62, Allsopp's stocks are dwindling away to vanishing point. Even the 4 per cent. debenture stock of the company was dealt in yesterday at 36. And no wonder, for the report just issued affords an awful spectacle of hopeless ruin. The nett profit was only £93,284, and the deficiency shown is £72,794. The only firm spot was in American Breweries, and both Bartholomay and St. Louis shares show a slight advance. The upward movement proceeds in London Docks preferred and deferred, and the business in the deferred has been most vigorous, carrying the price up 4½ on the week. Millwall Dock issues have also been jumped up from 3 to 5, all on tips with reference to the coming changes in the Port of London, chances of being bought out, and so forth.

Commercial and Other Securites.

Generally speaking the gamble has not yet extended with any force to Commercial and Industrial shares and debenture issues, but they have hardened a little here and there during the week, and in spite of the rather poor statistical outlook a majority of Nitrate shares continue firm, with now and then improvements of ¼ to ½. Nobel Dynamite shares are likewise better, a fresh agreement, it is understood, having been entered into to avert competition, and keep prices up. Debenture issues, however, continue to lose ground in too many instances, and seem to fall of their own weight, as it were, although there are exceptions. Castner-Kellner's debenture stock, for instance, is 30s. up on the week, and the company's shares are also firm. Gordon Hotels 4 per cent. debenture stock is likewise £1 better, and so are the debentures of the Anglo-Russian Cotton Factories. Western Mansions debentures are down 3, and losses of 1 or more are noticeable in Joseph Travers and Sons' debentures, British Aluminium Loch Leven debentures, and in the debenture stock of the Consolidated London Properties Company. Among shares improvements have occurred in Bryant and May's preferred, California Oilfields ordinary, Callender's Cable preference, Eastman Kodak common and preferred, Gramaphone ordinary, "Moss" Empires ordinary, and many others.

The Minor Groups.

Electric securities rose, Mexican Electric Light first bonds as much as 5, the Power Company's bonds 2, and the Montreal Company's shares 3. English Electric Light companies' shares were also a trifle higher now and then. Among Land shares, Hudson's Bays still lead, and last night's price was about 77½ or 3 up, which is not bad for a £10 share. The debentures of the Queensland Investment Company have gone up 6½, and the preferred ordinary 3½, but Trustees and Executors, &c., ordinary stock has lost 3. Pekin Syndicate things are firm still, and so are Peruvian stocks. Financial Trusts have not rallied much, but the market is rather less flabby, and people had better perhaps abstain from trying to throw stocks on it at present. Insurance shares have been firm, with hardly a set off, but trading in them is very poor. The aspect and changes are not quite so favourable in iron, coal, and steel stocks, but none of the domestic issues have given way much, and Carnegie Trust things are up with the other Yankee papers. Apart from a recoil of 1½ in Royal Mail ordinary stocks, nothing of moment has happened among shipping securities, nor have the changes been interesting in Tea, Coffee, and Rubber shares, but the improvement has been more general in Telegraph shares, and Eastern Telegraph stock is again 2 up. National Telephone preferred has risen 1½, and the deferred 2. Anglo preferred is also 2 better. B.E.T. shares are better, but the debenture issues are quite flat, and 1 to 2½ down. General Omnibus stock has risen 2.

Friday Evening.

A quiet day, with little business doing. Prices of Yankees better, being brought from New York on the news that the National Bank of Pittsburg had stopped, or for some equally cogent reason. Home Railway stocks were also supported, with a big business in Great Northern and Great Centrals. Consols kept their price well, after a poor beginning. Mining things were also rather supported than not, and Tintos had quite a rally all to themselves. The Continent manœuvred on the bull tack, and London on the bear in Kaffirs.

WATERWORKS.—Rise: Colne V. Org. 1, 24-25, Water Board Kent Deb. 1, to 84-87xd, do. Staines Res. 1, to 85-88.

LONDON AND WESTMINSTER BANK.—Liabilities on November 30, consisted of current accounts and deposits £25,850,477, acceptances and endorsements £1,734,582, and other liabilities, £1,366,358 against which there were cash in hand and at Bank of England £3,194,819, money at call and short notice £3,662,298, Imperial Government securities £3,885,000, bills discounted, loans &c., £19,251,843, and other securities £1,423,677.

Critical Index to New Investments.

CAPE OF GOOD HOPE DEBENTURES.

Subscriptions will be received by the London and Westminster Bank, Limited, for £1,000,000 4 per cent. 10 years' debentures of the above Government, which are issued for the purpose of carrying out certain railway and other public works. Nominally the price has been fixed at 95, but the actual cost to investors works out at rather less, as a full six months' interest will be paid on April 1, while the final instalment is not due until February 3, although payment in full may be made on or after December 16, under discount at 4 per cent. per annum. The loan is repayable at par on October 1, 1917, and allowing for the gain on redemption the yield comes out at about 4¾ per cent.

MAXIM'S, LIMITED.

Subscriptions were invited this week for an issue of £120,000 in £1 shares of the above company, which acquires a fashionable restaurant in Paris. The premises taken over are leasehold, having about 31½ years to run, and are valued at £22,682, exclusive of £13,506 spent on alterations and enlargements, which are valued separately, making a total of £36,188. Although the promoters secured this lease and the stocks of wines and liqueurs for £76,000 all told, the company is asked to pay £104,000 in cash for the premises and goodwill, and £12,000 for the stocks, or £116,000 in all, representing a profit to the intermediaries of no less than £40,000. Profits of the business for the 8¾ years to September 30, 1907, are set out in detail, and show that since 1903 there has been a fairly steady annual increase. The business, however, is one which depends entirely on the fashion of the day, and having regard to the large proportion of the capital unrepresented by tangible assets, the shares can only be regarded as a speculation, and not an over attractive one at that.

LANCE AND LANCE, LIMITED.

This is a firm of drapers, warehousemen, and general furnishers at Weston-super-Mare, the proprietors of which are desirous of converting it into a limited liability company, and incidentally of pocketing a tidy sum in cash. The capital is £110,000, divided equally into 6 per cent. cumulative preference and ordinary shares, of which the former are offered for subscription, together with £55,000 of 4½ per cent. first mortgage debenture stock at par. Assets consist of freehold land and buildings valued at £70,356, stock £32,805, book debts £23,220, and sundry items, including £8 10s. in cash, bringing the total up to £136,835, less £5,800 for trade liabilities. To this is added £23,965 for goodwill, making a total of £155,000, and in payment the vendors take £100,000 in cash, and £55,000 in ordinary shares, leaving £10,000 as additional working capital. The business has been established for upwards of half-a-century, and came into the vendors' hands in 1894, since when they claim to have developed the business to such an extent that the turnover is now nearly six times greater than when it was acquired. Profits, however, are only set out for the three years to January 10, 1907, and do not seem particularly brilliant as the average for that period was only £9,254.

Company Reports and Balance Sheets.

**** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* INVESTORS' REVIEW, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

MADRAS RAILWAY COMPANY.

Owing principally to an abatement of the plague epidemic and consequent relaxation of the rigid rules, the number of third class passengers carried over this company's main line during the six months ended June 30 was the highest recorded, and showed an increase of 561,445 with a corresponding improvement of £12,303 in revenue. First class passengers also increased in numbers, but yielded rather less, while second class passengers gave nearly £1,000 more and with an additional £1,583 from parcels the earnings from coaching traffic were £13,547 larger at £205,052. At the same time goods produced an extra £18,858 at £442,571, the principal gains being £11,724 in cotton, £6,199 in provisions, £3,289 in wood and between £2,000 and £3,000 in dyes and tans, minerals and oils and oil seeds, while grains and pulse fell off by £12,044 and hides and skins by £3,873. Telegraphs and sundries produced £17,218 or £1,965 more, and the total income from all sources was £33,469 better at £724,841. Working expenses, on the other hand, were £5,365 heavier at £99,435, maintenance of way and works took £40,644 more at £131,346, due to extraordinary outlay on laying bull-headed rails and repairs of stations, and locomotive and carriage and wagon expenses rose by £44,480 to £209,923, mainly owing to the outlay on coaching vehicles. Expenditure under all heads amounted to £290,389 or 40·08 at £440,714, the ratio to revenue being 10·13 per cent. up at 60·8 per cent., and the nett income was consequently only £284,147 against £341,047. After making various adjustments the nett surplus was Rs 31,17,561 or £285,776, or £57,350 less, and represents a statistical return of £4 10s. per cent. per annum on the capital bearing interest compared with £5 14s. 7d. per cent. in the corresponding half of 1906. The guaranteed dividends of £2 10s. per cent. for the current six months will be distributed as usual on or about January 1, but nothing is to be left this time compared with 1s. 6d. per cent. a year ago.

The distribution in January will be the last payment of guaranteed dividends as the line is now taken over by the Government and divided up between the Southern Mahratta and South Indian companies. With reference to the acquisition of the line, the directors state that the valuation per cent. in terms of the contract, terminated on April 1, and the value of the various stocks has been agreed upon between the secretary of State and the company as £126 400-891 for the 5 per cent., £118 177-891 for the 4½ per cent., and £111 077-1,782 for the 4½ per cent. Proprietors will have the option of receiving repayment of the capital in annuities of two classes, the first or "A" being without deduction for sinking fund and the second or "B" being subject to such deduction. In class "A" the annuity will amount approximately to £5 0s. 3d., £5 2s., and £4 16s. 3d. for every £100 of the respective stocks, and will be in complete liquidation of both capital and interest, so that in 48¼ years the payment of the capital will have been entirely discharged. The class "B" annuity will provide for a deduction at the rate of 4s. 4d. in the £ from the full annuity which will go to form a sinking fund to be invested so as to produce as near as may be the respective values of the stocks as noted above by accumulation of interest at the end of the term of 48¼ years. Provision is being made in the Madras Railway Purchase Bill for the exchange of annuities for capital stock not exceeding £1,500,000 of the reconstituted Southern Mahratta Railway, which is now to be known as the Madras and Southern Mahratta Railway. Efforts were made by the directors to induce the Secretary of State to distribute such reductions of staff as were inevitable over the establishment of all the companies concerned, but they were successful only in obtaining a promise that the services of all the staff should be retained until June 30 next during which time the line will be worked as a State Railway. As regards the London office staff, it is proposed to grant them gratuities amounting to approximately £6,500 out of the separate fund which has been built up out of various small windfalls received from time to time. This fund has been invested and reinvested until it now represents about £28,000, and in addition to the above it is proposed to set all charges contingent on the first establishment of the annuity and to set aside £5,000 for a contingent fund from which any special legal or other expenditure could be met. Altogether the charges will amount to about £15,300, and the balance remaining will be disposed of when the winding up operations are completed. Besides the separate fund there are arrears of outstanding profits in dispute amounting to about 6 lakhs of rupees of which 2½ lakhs have been provisionally passed and the remainder is to be submitted to arbitration. Should all the sums be decided in the company's favour, however, its share would only be 1¾ lakhs or £11,666, and this will be dealt with in the final distribution of assets, probably in April or May next, as soon as the current half-year's working can be made up. It is not anticipated that there will be any surplus profits for this period, and the sums of money likely to come into the final distribution will hardly produce any very important dividend when distributed over the £10,257,030 of stock.

EAST INDIAN RAILWAY COMPANY.

Gross receipts for the six months ended June 30 were again the highest yet recorded, and showed an increase of Rs 66,33,010 at Rs. 4,40,66,702, but working expenses rose by Rs 7,26,385 to Rs. 1,64,30,273, leaving nett earnings at Rs 2,76,27,429 compared with Rs 2,66,80,893. Of the improvement in gross income Rs. 12,63,528 came from coaching traffic and was mainly derived from third class passengers, the increase in which is attributed to the Mela at Thanesar, to gatherings at bathing places in connection with the solar eclipse in January, and to the Magh Mela at Allahabad. First and second class passengers were also carried in larger numbers owing to the visit of H.M. the Ameer of Afghanistan and to a greater inflow of tourists to the country. In goods traffic an additional 420,305 tons were carried, or 8·8 per cent., increase on balance of Rs. 4,02,507, the principal gains being grain 7¼ lakhs, jute 2 lakhs, seeds 5¼ lakhs, wheat nearly 2 lakhs and miscellaneous 4½ lakhs, while decreases were shown of 8½ lakhs in coal, 3 lakhs in sugar, 1¾ lakhs in hides and skins, 1½ lakhs in rice and 1 lakh in iron. On the expenditure side maintenance and renewal of permanent way and works cost Rs 40,48,620 or an increase of Rs 1,80,800, due to the additional mileage maintained as the outlay on repairs and renewals to

bridges was reduced by Rs. 3,13,112. Additional mileage through the opening of new lines was also partly responsible for an increase of Rs. 566,580 to Rs. 48,58,936 in locomotive expenses, although extra train services and the higher cost of coal also contributed. Carriage and wagon expenses showed a reduction of Rs. 6,41,355 to Rs. 14,68,290, but the decrease was more apparent than real, as it was in great measure due to the cost of unfinished vehicles being held in suspense. Traffic charges were Rs. 4,58,500 up, general charges rose by Rs. 1,15,503 and small increases in steamboat and miscellaneous charges brought out a total advance as stated above. Nett earnings, after deducting Rs. 6,26,654 for balance of gross earnings due to the Delhi-Umballa-Kalka Railway and Rs. 1,62,00,510 for interest and other charges, amounted to Rs. 1,06,18,342. Of this the company's share, less Rs. 24,607 for Indian income-tax, was Rs. 10,32,377 and produced £68,781 making with the balance brought in a disposable total of £126,039 out of which a dividend of £1 1s. 4d. per cent. is declared on the deferred annuity and deferred annuity Class "D" in addition to the guaranteed interest of £2 per cent. compared with £1 10s. 9d. a year ago. In order to provide for the capital which will be required at an early date to meet the expenditure on lines now under construction, the provision of rolling stock, &c., the directors ask for powers to create debentures or debenture stock up to £2,000,000.

Bombay, Baroda and Central India Railway Company.

Gross earnings for the six months ended June 30 showed an improvement of Rs. 11,14,721 at Rs. 2,75,43,672, of which Rs. 9,09,173 came from the Bombay Baroda line and Rs. 2,05,548 from the Rajputana-Malwa. The number of passengers carried, especially in the third-class, was much larger, and notwithstanding the reduction in fares which came into effect on January 1 receipts from this department rose by Rs. 7,08,802 to Rs. 90,18,803. Goods traffic yielded Rs. 6,31,668 more on the Bombay Baroda line, but on the other railway there was a decrease of Rs. 3,04,892, leaving on balance an advance of Rs. 3,26,776 at Rs. 1,80,71,259. On the first-named line the improvement was wholly in general merchandise, and was due chiefly to raw cotton, wheat, and oilseeds. Larger quantities of these commodities were also carried by the Rajputana-Malwa line, but the increases were more than neutralised by a reduction in hay and straw, grains, other than wheat, pulse, and salt. Traffic in coal and coke, however, was considerably larger, and there were likewise increases in sugar and railway plant and rolling-stock, and altogether the total tonnage carried by the whole system was 202,152 tons up. Expenditure was only Rs. 22,095 higher at Rs. 1,16,53,706, increases of Rs. 2,61,708 in traffic expenses, Rs. 53,455 in maintenance, and Rs. 40,214 in miscellaneous charges, being counterbalanced by reductions of Rs. 1,19,204 in locomotive expenses, and Rs. 2,21,414 in carriage and wagon. The first-named decrease is explained by the fact that the corresponding half of 1906 included charges for the renewal of five broad-gauge engines and three boilers against three boilers this time, while under carriage and wagon expenses renewals were lighter, and on this occasion no special writing back was required. Nett revenue amounted to Rs. 1,58,89,966 compared with Rs. 1,47,97,340, and this is carried forward towards the yearly total in which the company will share profits when in excess of Rs. 2,00,00,000 plus interest charges in respect of additional capital provided by the Government since January 1, 1906. The interest chargeable for the half-year on such Government capital amounts to Rs. 92,230.

South Indian Railway Company.

The first half of 1907 was an excellent one for this company and the result was an increase of about £46,760 in the nett revenue, converting the rupee at the conventional 15 to the £. In rupees the earnings rose by Rs. 3,27,584, at the same time that expenses fell off Rs. 3,88,423. Expenses accordingly fell to 47.90 per cent. of the earnings as compared with 55.93 per cent. twelve months ago. Altogether the gross income was Rs. 71,19,301 or about £475,000, the highest ever known, and all classes of traffic showed expansion. In numbers carried 99 per cent. of the passenger traffic is third class and that represented 95 per cent. of the passenger receipts. The company's share of the surplus profits, after meeting guaranteed interest came to £22,505, free of income-tax, and £10,504 was either brought in or received as interest on deposits, so that the entire income distributable was £33,009. Accordingly the directors are able to recommend a dividend of 35s. per cent. for the half-year ended June 30, to be paid on January 1, 1908. This added to the guaranteed interest of 30s. will be £3 5s. per cent. for the half-year, or at the rate of 6½ per cent. per annum compared with the 6 per cent. previously paid, and after making this distribution £16,384 will be left to carry forward, subject to English income-tax. During the June half-year about £151,000 was spent on capital account, most of it upon the existing system, which is now 1,364 miles long, nearly 11 miles having been added as compared with the first half of 1906. The mean mileage of the company's system was 1,130 miles, and the gross receipts per mile per week were Rs. 10 more than in any previous half-year at Rs. 244. Explanations are entered into by the board regarding the proposal of the Secretary of State that this South Indian Company should take over certain lines specified and surrender others to the Southern Mahratta Co. To this the directors have provisionally agreed, and after modifications the ultimate arrangement is set forth in the report. The financial basis of the agreement is that during the remaining three years of the South Indian Company's contract with the Government it is to receive the earnings of the line thus added to its system, while the earnings of the lines north of Katpadi will be given up. In consideration of the changes thus made, the Secretary of State is to retain about £103,000 per annum, that being the sum which, after close examination of the earnings actual and potential of the added lines, less those of the lines given up, may be considered the fair equivalent of the nett additional earnings expected to be received by the South Indian Company without risk of loss, or at all events with as equal a chance of gain as risk of loss.

Interoceanic of Mexico Railway Company.

Last year ended June 30 this company made a profit in sterling of £194,804, which was about £1,600 less than in the preceding year. Traffic receipts, however, went up considerably, passenger receipts having increased by 8.25 per cent. and goods revenue by 12.91 per cent., numbers and tonnage having advanced almost in like proportion. The figures of revenue and expenditure, given in Mexican dollars, are $7,192,925 income for the year and $5,297,460 working expenses, receipts having shown an increase of about $267,000 and expenses of $723,000, hence the decrease in the nett income. Including other small sources of revenue, the total available for distribution is £197,393, and this enables the board to pay the rent on the Eastern Mexican Railway Company, one year's interest on the prior lien debentures of the Interoceanic Company and on its 4 per cent. first debenture stock, with enough left to meet the 4½ per cent. due on the second debenture stock, and to pay the full rate, less income-tax, on the 7 per cent. "B" debenture stock, together with 3¼ per cent. on the 7 per cent. preferred shares. A balance of £715 will then be left to carry forward. It is also proposed to invest £13,000 in securities authorised by the Trustee Act as a special reserve fund for the redemption of the 5 per cent. prior lien debentures. So rapidly is the traffic on this road expanding that the directors have decided to convert its main line to standard gauge. At present the whole of it is a 3 ft. gauge road, and its carrying capacity is therefore inconveniently limited. It will take a good deal of money to make this change, but its value is unquestionable, and, indeed, the large business now passing through Vera Cruz renders a step of the kind imperative. Between the year ended June 30, 1905, and that closed last June the tonnage handled at the port has more than trebled, and amounted last year to 1,677,408 tons. How the money is to be raised to pay for the enlargement of the Interoceanic the board has not yet determined, but whenever a favourable opportunity arises definite proposals will be laid before the proprietors. In the meantime it is intimated that these proposals will include provisions for the redemption of the prior lien and "B" debenture stocks, as well as the debentures of the Mexican Eastern Company. Steps have been taken to present a Bill to Parliament to enable a settlement with the preferred shareholders in respect of their arrears of interest to be made.

Argentine Transandine Railway Co., Limited.

Work on the Cuevas-Summit section of this line was hampered during the year ended June 30 by the scarcity of workmen arising from the labour requirements of Chili, but the directors say that they have reason to hope that the contract date for completion will be anticipated, and that the line may be opened throughout in less than three years. The consulting engineers report that the earthworks have been completed and the track laid through to the mouth of the Summit tunnel, while the bridges and culverts are nearly completed. As for the tunnel itself, the full area has been excavated and timbered for a length of 91 metres, and is ready for the masonry lining. Gross receipts for the 12 months show a very satisfactory increase of £12,500 at £43,110, in spite of a falling off in the cattle traffic, and under the working agreement with the Argentine Great Western Railway the company received £6,898 compared with £3,723 a year ago. Expenses absorbed £3,685, leaving a balance of £3,213, to which were added £8,572 from interest on Rescission bonds held, £9,924 or £4,954 more from other interest and £44 from registration fees, making a total of £21,753. Interest at 4 per cent. on the "A" and "B" debenture stocks, however, required £24,813, so that £3,060 had to be charged to the completion of works reserve, reducing the credit balance of that account to £72,420.

London and River Plate Bank, Limited.

It was not to be expected that this bank would be able to repeat its excellent achievement for the year ended September 30, 1906, when its gross profits increased by over £120,000, but the results for the past twelve months were none the less decidedly satisfactory. Gross profits, after providing for bad and doubtful debts, were £62,049 up at £622,999, and although head office charges rose by £21,030 to £291,362 the nett surplus, including £44,943 brought forward, was £376,580 compared with £334,943. Interest on the 20,000 new shares issued a year ago at the rate of 5 per cent. per annum took £7,083, and after again paying a dividend of 20 per cent. and transferring another £100,000 to reserve, the directors put £15,000 or £5,000 more to the pension and benevolent fund and raise the sum carried out by £29,554 to £74,497. The reserve fund now amounts to £1,100,000 against a paid-up capital of £1,200,000, and the position seems in every way satisfactory. Deposits and current accounts show a rather important reduction of £1,217,368 at £18,052,386 and drafts in transit come to £199,036 less at £1,226,015, but acceptances are £223,409 higher at £3,406,885, while bills for collection have risen by £468,382 to £2,184,941, and Buenos Ayres clearing banks by £107,632 to £644,399, the last two items having a corresponding entry on the credit side of the balance sheet. On the other hand, cash is £150,621 smaller at £6,571,527, but still amounts to 36.40 per cent. of the liability on deposits, and bills receivable, bills discounted, advances, securities, &c. have been reduced by

£784,833 to £18,650,124. A branch has been opened at Valparaiso, Chili, but bank premises are valued at a few hundreds less at £170,981. The directors are able to add that the capital employed in South America suffers no depreciation at the rates of exchange now ruling, that on the amount placed in Valparaiso having been provided for.

COLONIAL BANK OF AUSTRALASIA.

Notwithstanding its 59 branches, this bank is quite a modest institution, whose business does not seem to expand to any appreciable extent. Its nett profits for the six months ended September 30 came to much about the same as a year ago at £19,532, but with rather more brought forward the disposable total was £262 up at £24,036. Out of this dividends are paid at the rate of 6 per cent. per annum on both the preference and ordinary shares, and another £10,000 is transferred to reserve, leaving £858 or £262 more to be carried forward. Government deposits have been reduced by £93,394 to £416,308, of which £369,856 carries interest, but other deposits are higher, and the total liabilities under this head show an increase of £65,489 at £2,981,542. On the other hand, coin, bullion and cash at bankers come to £539,975, and investments, remittances, &c., to £314,732, while bills discounted and other advances have risen by £289,627 to £2,751,364.

SAMUEL ALLSOPP AND SONS, LIMITED.

Really what will happen to Allsopps Solomon himself could not be trusted to forecast. Business was very bad in the six months ended March 31 last, but has been better in the half-year ended September 30, and continues better, but what hope is there in that when the nett profits for the entire year were only £93,285 after writing off a trifle like £12,988 for depreciation of leaseholds and lager plant, which is £2,400 less than last year. The gross profit was only £456,812, and the working charges of all kinds took £389,331 of this after crediting back sundry reserves £5,702 and cost of advertising boards £6,280, or £11,982 all told. Debenture and other interest took £144,712 and the compensation fund levy £6,242, besides which £2,137 was written off as balance of cost of converting the Trust Certificates, and the deficit for the year is therefore £72,794, which brings the entire deficiency on revenue account up to £193,283. And the company has no reserves; it is a mere mass of debts to the tune of £3,868,000 in all. Putting goodwill £1,431,088 against share capital £1,870,000 the remaining assets cannot be regarded as sufficient to cover the debts. Premises and plant creep up in cost and at £906,423 are now £10,456 more than a year ago in spite of £3,461 written off the lager plant. Freehold and leasehold houses stand at £1,357,346, after deducting £9,527 for depreciation and £180,705 for properties realised during the year, less additions. Trade loans, customers' balances and sundry trade investments attain a total of £996,323, and what they may be really worth the board itself probably would not care too closely to examine. But there is a suspense account of £147,274 which may be enough to cover the risks, and the one grave fact is that the company cannot earn its debenture interest. Yet the gross revenue has grown.

WORTHINGTON AND CO., LIMITED.

Before dealing with the report of this great brewery firm, it may be well to draw attention to a circular issued by the directors dealing with what they describe as the alterations in the licensing laws "threatened" by the present Government. The directors say: —"If these alterations are carried out they will still further cripple an already over-burdened industry, and seriously affect the interests of a large section of the British community. For the capital invested in the brewing and its allied trades approximates to £250,000,000, and gives employment to over one and a-half million of workers. Grave issues of public right and justice are at stake, in addition to those of private interests, and it is therefore obviously incumbent upon each shareholder to exert every effort to resist the projected legislation." All this may be going to happen, but we fear a balance-sheet such as this powerful and prosperous company presents to its shareholders is not calculated to excite much public sympathy. Profits for the past year, it is true, show a decrease of £212 on the previous year's figures, the year ending on September 30 in each case, but the total is still £151,403 after deducting compensation charges under the Act of 1904, and the balance left over when debenture interest and preference share dividends have been paid is £88,553, or quite enough to give the holders of the ordinary shares a 30 per cent. dividend, with upwards of £8,000 left to carry forward. A balance of £305,357 was brought in, so that the entire free revenue is £393,910, and even were a 35 per cent. dividend paid, this would still leave upwards of £300,000 to be carried to the new balance-sheet in addition to the reserve of £250,000, which remains the same from year to year. That surely is a fine display, however we may interpret it, and there seems to be no doubt at all that this company is one of the most prosperous brewery and public-house owning concerns in the kingdom. Its business, too, appears to be always expanding, for amongst the assets is the item £1,643,690 described as "investments, loans, interest and cash." How much is cash, how much investments, we are not told, but this total, which covers the public-house part of the business, shows an increase of £47,377 on that of a year back, and we are perhaps safe in drawing the inference that further licensed premises have been acquired in the interval. There is also a slight increase of £3,309 in the other large entry described as land, brewery, malt-houses, offices, railways, plant, fixtures, horses, harness, wagons, locomotives, casks, cottages, furniture, goodwill, &c.," which now stands at £782,187, and book debts have risen by nearly £12,000 to £100,133, while there is also an increase of over £17,000 in the stocks of malt, hops, barley, beer, &c., at £135,230. These increases are presumably provided for out of the large balance carried forward, but there is also some little indication of strain given by the increase of £56,093 in the item creditors, which now stands at £481,253. Mortgages have also risen by £27,181 to £76,077, but there is no alteration either in the amount of the two debenture stocks outstanding or in the share capital.

ILFORD, LIMITED.

Is the British citizen giving up photography to run after some new fad or is "road agent" competition the time damaging this company's business? We cannot answer these questions from anything said in the report and balance-sheet, but there can be no doubt of the decline in the business for the profit on trading fell off in the year ended October 31 last by £14,109 to £34,632, and the nett balance left after meeting all current charges was only £14,100 against £28,419 a year ago. This is a decline of more than 50 per cent. within a single year, and accordingly the directors are unable to pay any final dividend on the ordinary shares for the second half of the year. In the first half holders of these shares got a distribution at the rate of 4 per cent. per annum, but after meeting the full 6 per cent. dividend on the preference shares there is now only £1,838 left. A year ago both classes of shares got 6 per cent. and two years ago the ordinary shares got 6½ per cent., so that the descent has been rapid indeed. We wish it were possible to hope for as rapid a recovery, but we fear that is hardly to be expected. The balance-sheet, however, is remarkably clean, and the company owes only £8,005 to sundry creditors against £24,282, due to it by sundry debtors. Its cash, too, is almost the same as a year ago at £9,815, and the stock carried is quite modest at £17,714. The reserve fund at £44,000 is largely invested in first-class stocks on which there is unfortunately a continuous depreciation. Altogether £87,578 has been laid aside in this way, and at the date of the balance-sheet the market value of these stocks was only £72,084. This represents a further decline of £2,000 on the year, and is really a most unfortunate fact, illustrating the way holders of gilt-edged securities have been struck by the decay that has set in since 1900, and even now we are not at all sure that some of these stocks ought not to be sold, and the loss pocketed so that the money might be reinvested in other securities, whose depreciation has been already great, and that offer more assured chances of ultimate recovery than some of those now held.

SWIFT CYCLE CO., LIMITED.

The directors of this undertaking have a more or less encouraging story to tell the shareholders on account of the past year's operations. They say that the motor department has been successfully developed on satisfactory and profitable lines, and the results obtained have enabled the company to practically hold its own in spite of circumstances very adverse to the cycle trade in general during the past season. Stress is laid on the fact that the business is in no way embarrassed by any accumulation of stock, but at the same time we do not know that the results are anything to get excited about. Trading profit was only £34,274 compared with £41,876, and the directors proceed to bring in the premium of £5,000 received on the new issue of shares referred to last year. Transfer fees and interest produce £312, but altogether the revenue of £39,586 falls short of the previous year by £2,480. Directors' and trustees' fees are not exactly light at £1,330, depreciation and maintenance account for £7,281, debenture interest is £4,750 and expenses of issue of new capital £500 are written off leaving the balance of nett profit at £26,465. To that is added £2,930 brought in making a total of £29,394, and after meeting the preference dividend a total return of 20 per cent. is again made upon the ordinary shares. These having been doubled in amount during the year the sum required for this dividend is now very much larger, and while the directors make a show of adding £6,000 to the reserve £5,000 of it consists of the share premiums leaving the actual contribution from profits £1,000 only or £14,000 less than last time. All which amply justifies the criticism made twelve months back when the new capital proposals were formulated that the original vendors should have found the fresh money required, deferring their dividend until the original proprietors had had a fair return on the amount of capital at first subscribed. It may be that the advantages of the cautious policy pursued by the company in the development of the motor trade now enables the directors to proceed with important operations on safe lines in this branch of the business, but there is no getting away from the fact that the introduction of fresh capital into the business has been accompanied by a severe drop in profits. Capital expenditure during the year was on a fairly large scale, rather less than £15,000, and while in some instances the depreciation allowance seems fair, in others it is quite insufficient. Ordinary reserve, however, will now be £53,000, apart from the special motor reserve of £75,000, and the general finances appear in pretty good order. Only £23,621 is owing to sundry creditors against debtors £05,041, after making provision for bad and doubtful debts, cash is £24,838 and stock £60,232.

ANGLO-BELGIAN COMPANY OF EGYPT.

The report of this company to July 31 last covers a period of nearly seventeen months, and makes a miserable enough display. Including everything, the revenue for that period was only £13,717, of which £5,504 came from interest on loans, £3,488 from interest on obligations of the Fayoum Light Railways Company, and £4,488 from profit on sales of land. Of this expenses took away all but £2,312, general expenses in London having absorbed no less than £6,305, surely a monstrous amount. The balance-sheet is just as unsatisfactory. Alto-

gether the company has raised £346,575 on shares issued, and it owed £155,252 at the date of the balance-sheet, representing the company's share of properties purchased and payable at future dates, and the amount for which it is responsible on other properties, but which the joint holders have ultimately to refund. Preliminary expenses still figure in the balance-sheet for £4,363, notwithstanding the annexation of £17,417 of premiums received on the shares and of £7,044 representing interest on the bonds of the Fayoum Light Railways Company for 1904-5, or in all £24,401, written off against these expenses. In other words, these preliminary expenses total almost £29,000. The pickings must have been fat. The Fayoum Railway figures amongst the assets at £222,544, including £54,848 of money lent and interest thereon. Land properties belonging to the company and held on joint account stand at £193,411, the company's share of the joint properties being put at £92,314. Sundry debtors owe £15,105 and cash stands at £1,220. There is also an item of £64,918, representing joint holders' shares in properties, but that is a cross entry. From a recital of these figures, it will be seen that no light whatever is thrown by them upon the company's real position, and the report is just as reticent. A small profit, however, is carried forward, and no dividends can be paid. Accompanying the report of the Anglo-Belgian Company is that of the Fayoum Light Railways, and that also is far from translucent, but the gross receipts for the ten months covered by it were £E22,084 and working expenses came to less than £E10,000. There were other charges, bringing the entire necessary outlay, including interest, up to nearly £E13,000 and £E3,500 was carried to general reserve. One outstanding coupon on the company's debentures is also provided for, and a balance of £E1,595 was left to carry forward.

Digalla Ceylon Tea Estate Co., Limited.

This company's dividend was made up to 15 per cent. out of the business of its year closed on June 30 last. Its tea crop was 548 lbs. per acre or 328,571 lbs. in all, and it had the advantage of a higher average rate of exchange. Soon it will be producing rubber and when that time comes its figures may be larger. Meanwhile the balance-sheet adds up to no more than £28,090 and the gross produce of sales was only £8,837. Expenditure in Ceylon took £5,632 and London charges were exceedingly modest at £160, exclusive of income-tax.

BRANDON'S PUTNEY BREWERY, LIMITED.

NOTICE IS HEREBY GIVEN that the Transfer Register of this Company will be closed from the 17th inst. to the 31st inst., both dates inclusive, for the preparation of Interest and Dividend Warrants, payable on and after January 1st, next.

By order,
JOHN LONGMAN,
Secretary.

The Brewery,
Putney, S.W.
December 5th, 1907.

THE CAPE COPPER COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN that the Twentieth Ordinary General Meeting of the Shareholders of this Company will be held at the Cannon Street Hotel, in the City of London, on Wednesday, the 11th day of December instant, at Three o'clock in the afternoon, to receive the Reports and Accounts for the year ending August 31st, 1907, and for general purposes.

And Notice is also hereby given that at the said Meeting the following Resolution will be proposed, viz.:

"That the draft new regulations submitted to this Meeting and for the purpose of identification subscribed by the Chairman thereof be and the same are hereby approved and adopted as the regulations of the Company to the exclusion of and in substitution for all the existing regulations thereof."

The regulations of the Company registered on its incorporation in 1888 having by reason of intervening legislation and lapse of time become somewhat antiquated, the Directors consider it desirable to adopt a fresh set of regulations brought up to date, and in effect making various alterations in the old regulations. The draft new regulations will be produced at the Meeting and explained, and in the meantime may be inspected at the office of the Company during business hours. One of the alterations is to reduce in certain cases the quorum which by Clause 43 of the original regulations is required for the purpose of a class meeting. This alteration is expedient inasmuch as a large proportion of the shares are represented by share warrants to bearer, many of which are held in foreign countries.

Should the above resolution be passed by the requisite majority, it will be submitted for confirmation as a Special Resolution to an Extraordinary General Meeting which will be subsequently convened.

In conformity with the Articles of Association, John E. Champney retires from office at the above Meeting, but, being eligible, offers himself for re-election

The Auditor, William B. Peat, of 11, Ironmonger Lane, E.C., offers himself for re-election.

The Transfer Books will be closed from the 4th to the 11th December, both dates inclusive.

Holders of Share Warrants wishing to attend this Meeting must deposit same at the office of the Company three clear days before such meeting.

By Order of the Board,
P. J. FRANKS,
Secretary.

Registered Office:—
9, Queen Street Place, London, E.C.
3rd December, 1907.

Answers to Correspondents.

****** A Key to these Answers will be posted early each week to Subscribers of ONE GUINEA per annum, 11s. for six months, or 5s. 9d. for three months.***

Deposits against future queries may be lodged with the Publisher.

Alpha.—(1) Such an arrangement should improve profits. It is possible next dividend may be less than previous two, but even so there should be enough to give a good yield at present price. (2) On present rate of dividend, and a probable life of 20 years, the shares, to give a yield of 6 per cent., and a sinking fund reinvested at 4 per cent., must be bought at about 3⅞. (3) On the dividend paid these shares are much too high—there are, of course, speculative chances, as the company is interested in a large number of properties. We cannot recommend them as an investment. (4) There is some talk of the Government in that country being induced to come to the support of the product. It is a doubtful policy. The shares are only of small nominal denomination, and they look very high at their present price. (5) We cannot consider these a good purchase. The financial situation is bad, and this particular concern is grossly over-capitalised. We will send you a list shortly.

Nopir.—We cannot discover that there is anything to cause alarm. There has, of course, been considerable depreciation in the securities held, but those connected with the company are of good repute. We are inclined to think there is no hurry to purchase stocks of either this company or the second one you mention. It also is a good concern, but depreciation of holdings may go further. The Yankee recovery is an unhealthy condition, and will result in prices being driven below intrinsic values. We have seen it in our own home markets.

Paradox.—The company may suffer sympathetically with others in the trade, but the security should be ample for the debentures. We question, however, whether it is worth while averaging at the present price. Your letter contained no other enclosure than the reports which we have returned as requested.

G. H. B. P.—If these are not held with borrowed money it seems a pity to accept a loss. Prices will probably go lower, but we think the country will eventually pull through.

J. S. H.—As you have a fairly good profit on these you might take it as there may be a chance of getting them back cheaper.

E. J. T.—(1) We have made careful inquiries, but cannot find that anything is wrong with the company. There are a good many large shareholders, and fall might have been caused by selling to protect other interests. (2) Not in the present and prospective state of the iron trade.

B. W. J.—We see little hope of any improvement in these shares, and although the company has done better lately, there is no great margin of real assets behind this issue. As, however, the dividend is paid regularly, you might keep them, but why not establish your own depreciation fund by treating them as, say, 4 per cent. instead of 5½ per cent. shares?

Llandudno.—The company's position has never been good since its capital was expanded, and we see little prospect of any recovery in the shares. Better cut your loss if you can find a buyer.

Anxious.—We think you should hold on for a time at any rate. Desperate efforts are being made to work up the market, but general conditions are so bad that it is doubtful if they can keep the game up.

T. C.—(1) Might be worked up a little further. (2) This stock also looks like hardening, so it seems a pity to sell just yet, although neither is worth the money. (3 and 4) Hold both of these in the hope of stimulus from the benefits of the agreement. (5) The same answer may be given in this case. At a venture almost put down No. 1 at 85, No. 2 at 90, No. 3 at 105, No. 4 at 75, and No. 5 at 100 or 103.

Citizen.—As you have the shares it might be as well to hold for a recovery. Estimates as to life are largely guesswork, but range from thirteen years downwards. Grade of ore, however, seems to be getting poorer, and if that is the case dividends on the old scale cannot be expected. Part of dividends should be used to write down cost.

Messrs. J. Henry Schröder and Co. have received a cable from their Santos agents advising them that they have further encashed £18,200 in respect of the surtax collected weekly for the service of the State of San Paulo 5 per cent. Exchequer Bonds Loan, making a total of £386,300 encashed since August 1.

South Australian Government 4 per cent. bonds for £500,000 maturing January 1, 1908.—The Government of South Australia have instructed the Bank of Adelaide to give holders the option to surrender these bonds for cash payment, with accrued interest to date of surrender (principal and interest payable three days after lodgment of bonds with the Bank of Adelaide), or of converting the bonds into 3½ per cent. inscribed stock on the following terms:—For every £100 of these bonds, with coupon attached due January 1, 1908, surrendered to the bank, the South Australian Government will issue £100 3½ per cent. inscribed stock 1926-36, and also pay £1 10s. in cash. The inscribed stock will be dated July 1, 1907, and a half-year's interest will be payable on January 1, 1908.

MINING RETURNS.

Angelo.—Milled 32,700 tons, 14,434 ozs.; profit, £32,366.

Ashanti Goldfields Auxiliary.—458 ozs., value £1,832.

Associated Northern Blocks.—Milled 3,667 tons; slimes 1,385 tons; yield, £12,338.

Balaghat Gold.—Quartz 4,650 tons, 2,266 ozs.; tailings 4,368 tons, 392 ozs.; total, 2,658 ozs.

Barrett Gold.—333 ozs., valued at £1,250.

Bonanza.—Crushed 2,888 tons, 687 ozs.; cyanide and slimes 2,957 tons, 698 ozs.; total, 1,385 ozs.

British Broken Hill.—2,501 tons crude ore produced 462 tons concentrates, containing 282 tons lead and 12,012 ozs. silver.

Broken Hill Proprietary.—Refinery products (including product from ores purchased), gold, 1,160 ozs.; silver, 319,137 ozs., soft lead, 4,174 tons; antl. lead, 63 tons. Zinc concentration and zinc concentrates, 3,976 tons, containing silver, 65,509 ozs.; lead, 423 tons; zinc, 1,643 tons.

Broken Hill Proprietary Block 10.—Treated 11,812 tons crude ore, producing 1 994 tons concentrates, containing 1,176½ tons lead, and 63 808 ozs. silver.

Broken Hill Proprietary Block 14.—Treated 5,130 tons crude ore, producing 649 tons concentrates, containing 397 tons lead and 18,544 ozs. silver; lead carbonates despatched, 1,835 tons, containing 605 tons lead and 18,350 ozs. silver.

Broken Hill South Silver.—21,958 tons crude ore produced 3,300 tons concentrates, containing 2,343 tons lead and 69,300 ozs. silver.

Broomassie.—Crushed 690 tons, 1,198 ozs.

Cason Gold.—Milled 35,000 tons, 15 449 ozs.; profit £32,857.

Champion Reef.—14,110 tons, 8,024 ozs.; 17,933 tons tailings, 2,410 ozs.; total, 10 434 ozs.

Chinese Engineering.—Output, 21,000 tons; sales, 17,500 tons; consumption, 1,675 tons.

Dharwar Reefs.—Crushed 990 tons, 525 ozs.; tailings assay per ton, 5 dwts.

Driefontein Consolidated.—27,200 tons milled, 9,925 ozs.; profit, £15,800

Duff Development.—Prospecting Dredge, 56 ozs,; No. 2 dredge, 33 ozs.; No. 3 dredge, 18 ozs.

Durban Navigation Collieries.—Output, 15,600 tons; sales, 16,800 tons.

Ferreira Deep.—Crushed 23,200 tons, 9.712 ozs.; 16,430 tons sands, 3,602 ozs.; 6,244 tons slimes, 611 ozs.; total, 13,925 ozs.; profit, £34,500.

Geldenhuis Estate.—Crushed 18,560 tons, 3,503 ozs.; tailings, 1,941 ozs; slimes, 440 ozs.; total, 5,884 ozs.; profit, £11,110

Geldenhuis Deep.—Crushed 31,200 tons, 7,398 ozs.; sands 19,980 tons, 2,889 ozs.; slimes 10,270 tons, 616 ozs.; total, 10,903 ozs.; profit, £16,600.

Glynn's Lydenburg.—Crushed 2,652 tons, 622 ozs.; cyanide 1,739 tons, 616 ozs.; slimes 913 tons, 405 ozs.; total, 1,643 ozs.

Golden Pole.—Crushed 1,606 tons, 626 ozs.; 1,530 tons sands and 10 tons concentrates, 257 ozs.

Hutti (Nizam's).—774 ozs. from 2,200 tons crushed; tailings—192 ozs. from 2 100 tons.

Koffyfontein.—3,600 carats diamonds recovered; 328,750 loads blue ground on floors.

Lace Diamond.—Loads washed 34,783; carats 3,409, yield per 100 loads 980.

Lancaster West.—Crushed 6,440 tons, 1,187 ozs.; cyanide 5,174 tons, 893 ozs.; total 2,080 ozs.; profit £1,392.

Lloyd's Copper.—Production 102 tons.

Merton's Reward.—Crushed 737 tons ore, 274 ozs.; 490 tons sands, 89 ozs; 243 tons slimes, 44 ozs.; total 407 ozs.

Meyer and Charlton.—1,765 ozs. from 11,622 tons crushed, 2,884 ozs. cyanide; total 4,649 ozs.; profit £7,909.

Mi P's Day Dawn United.—1,950 tons quartz, value (including residues) £20,25 .

Mysore.—16,850 tons quartz, 15,496 ozs.; 15,975 tons tailings, 2,133 ozs.; total 17,629 ozs.

Mysore West—Mysore-Wynaad.—280 standard ozs. from 2,496 tons cyanided.

New Bayley's.—78 tons, 256 ozs.

New Comet. Milled 23,500 tons, 8,299 ozs.; profit, £11,031.

New Goch.—Crushed 21,864 tons, 4,435 ozs.; cyanide, 2,570 ozs.; total, 7 005 ozs.; profit, £8,507.

New Hillgrove. Crushed 171 tons, 605 ozs.

New Ravenswood.—Crushed 1,451 tons ore, value £4.889; concentrates 160 tons, value £1,540; tailings treatment, 128 tons concentrates, value £1,110.

Nigel. Crushed 10,350 tons, 4 438 ozs.; profit, £6,502.

No. 2 South Great Eastern.—Crushed 1,070 tons, 461 ozs.

North Broken Hill. Treated 2,485 tons crude ore, producing 420 tons concentrates, containing 291 tons 5 cwts. lead, and 7,560 ozs. silver.

Nundydroog.—7,100 tons quartz, 5,682 ozs.; 6,750 tons tailings, 580 ozs.; from plates, 502 ozs., total, 6 773 ozs.

Ooregum.—10,708 tons stone, 5,367 ozs.; dismantling old mill produced 410 ozs.; 9.126 tons tailings, 869 ozs.; total, 6,646 ozs.

Peiser Diamond.—21,650 loads washed, yielding 2,189 carats diamonds, an average of 10·11 carats per 100 loads.

Queensland Copper.—Treated 1,508 tons ore, production 291 tons matte, containing 162 tons fine copper; shipments advised, 356 tons matte.

Roberts Victor Diamonds.—24,389 loads washed, producing 12,871½ carats, average 52 carats per 100 loads.

Roodepoort Unit'd.—Crushed 15,420 tons, 4,071 ozs.; cyanide, 2,426 ozs.; total, 6,497 ozs.; profit, £10,526.

Rose Deep.—Crushed 34,200 tons, 9,765 ozs.; sands 20,560 tons, 2,566 ozs.; slimes 10,142 tons, 734 ozs.; total, 10,065 ozs; profit, £15,000.

St John Del Rey.—Gold produce Nov., £27,200, yield ·62 of an ounce troy.

Scottish Gympie.—Crushed 7,500 tons, 2,050 ozs.

Sheba Gold.—6,200 tons, 1,820 ozs.

Tasmania Gold.—Crushed 3 070 tons quartz, 1,518 ozs.; 193 tons concentrates, 678 ozs.; 2,508 tons cyanide, 124 ozs.; total, 2,020 ozs.

Tasmanian Smelting.—Silver-lead bullion shipped contained 1,020 tons lead, 142,000 ozs. silver, 373 ozs. gold.

Tolima.—70 tons, value £3.500; profit, £850.

Transvaal Gold Estates.—Crushed 8,937 tons, 2,815 ozs.; centra cyanide 3,640 tons, 1,049 ozs., central slimes 3,389 tons, 877 ozs. Kameel's cyanide 1,230 tons, 243 ozs., Kameel's slimes 698 tons 170 ozs.; Elandsdrift 257 tons, 155 ozs., total, 5,309 ozs.

Van Ryn.—Crushed 23,300 tons, 6,872 ozs.; sands, 15,655 tons, 2,008 ozs.; slimes, 7,705 tons, 674 ozs.; total, 9,554 ozs.; profit, £17,458.

Vereeniging Estates.—Output of coal, 26,590 tons.

Voorspoed Diamond.—Washed, 17,818 loads, producing 3,865 carats.

Wankie (Rhodesia).—Output, 10,273 tons; sales, 6,872 tons.

Wassau.—Crushed 4,050 tons, 1,460 ozs.; cyanide, 3,025 tons, 410 ozs.; total, 1,870 ozs.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Assam Railways and Trading.—Preferred "A" shares, at 6s. per share, on account of arrears, payable Dec. 23; pre-preference shares, at 8 per cent. per annum for half-year ending Dec. 31; new 6 per cent. shares, at 6 per cent. per annum for half-year ending Dec. 31, payable Jan. 4.

Interoceanic of Mexico (Acapulco to Vera Cruz).—£2 5s. per cent. on the 4½ per cent. second debenture stock, making 4½ per cent. for the year and £7 per cent. on the "B" debenture stock; also 3½ per cent., equal to 6s. 6d. per share, on the 100 000 7 per cent. preferred shares, setting aside £13,000 for investment in trustee securities as a special reserve, in accordance with the conditions of issue of the 5 per cent. prior lien debentures.

INSURANCE.

Royal.—Interim of 10s. per share.

Sun.—Interim of 5s. per share.

BREWERIES.

Barclay, Perkins, and Co.—At the rate of 4 per cent. per annum on the preference shares, payable Jan. 1.

Bartholomay (of Rochester).—12s. per share on the preference shares.

Chicago.—At the rate of 5½ per cent. for year ended Nov. 30, carrying forward £4,640.

Royal Brentford.—Interim for six months ended Dec. 31 at the rate of 8 per cent. per annum on the ordinary shares.

MINES.

Butte Coalition.—15c. per share, payable Dec. 17.

Champion Reef.—For year ended Sept. 30 4d. per share, payable Jan. 1, making for year 1s. per share.

May Consolidated.—22½ per cent. (equal to 4s. 6d. per share)

Mills' Day Dawn United.—1s. per share and a bonus (third) of 1s. per share, making total 2s. per share, payable Dec. 10

Namaqua Copper.—On account of current year, interim of 3s. per share, equal to 7½ per cent., payable Dec. 18.

Sulphide Corp.—10 per cent. on the preference shares for year ended June 30.

Tomboy.—2s. 6d. per share, payable Dec. 14.

MISCELLANEOUS.

Alsing and Co.—10 per cent. per annum for year ended Sept. 30.

Bank of New Zealand.—Interim of 5 per cent

Baraoora (Sylhet) Tea.—On the preference shares half-yearly to 31st inst. of 2½ per cent, and on the ordinary shares interim on account of 1907 of 2½ per cent.

Dooars Tea.—Interim of 10s. per share on the ordinary, payable Jan. 1.

Empire of India and Ceylon Tea.—Interim of 5s. per share on the ordinary, payable Jan. 1.

Forestal Land, Timber, and Railways.—Interim of 3 per cent in respect of the profits for the year ending Dec. 31 on the preference shares

Galaha Ceylon Tea Estates and Agency.—Preference for half-year ending Dec. 31 at the rate of 6 per cent. per annum

Goldsbrough, Mort, and Co.—Interim on the shares for six months ended Sept. 30 at the rate of 10 per cent. per annum.

J. and E. Hall.—6 per cent., carrying forward £8,703

Lungla (Sylhet) Tea.—Interim preference of 3 per cent, on account of 1907.

Milners' Safe.—Usual interim at the rate of 5 per cent. per annum for the half-year ended Nov. 30.

Pabbojan Tea.—Interim of 5 per cent.

St. George's Coal and Estates.—6d per share, payable Dec 31

Societe Anonyme des Mines et Fonderies de Pontgibaud—17 50 f., equal to 13s 4d per share, payable after Dec 5

Spicer Brothers.—Interim at the rate of 5 per cent per annum on the preference and ordinary shares

The Mint, Birmingham.—Interim at the rate of 7½ per cent per annum on the ordinary shares for six months ended Sept 30

Vallambrosa Rubber.—Interim of 25 per cent.

TRADE AND PRODUCE.

Wheat.—Markets have been quiet this week, not to say dull, and business has in many cases only been done at slightly reduced quotations. English wheat continues to be firmly held in spite of liberal supplies, farmers this week delivering 62,995 qrs. averaging 34s. 7d. against 60,299 qrs. averaging 26s. 1d. last year, but foreign has gone about 3d. lower for spot parcels, and demand even at the reduction has been disappointing. Supplies from abroad are more moderate again this week, Dornbusch estimating the quantity of wheat and flour on passage to the United Kingdom at 1,960,000 qrs. against 2,065,000 qrs. last week, and to the Continent 1,130,000 qrs. against 1,270,000 qrs. Imports also are considerably less, being only 241,057 qrs. against 406,747 qrs. last week and 377,020 qrs. last year. The weakness of European markets reflected upon American ones, and they were more or less depressed throughout the week. The bears had it all their own way except for occasional brief rallies.

Wool.—The effects of the London sales have not been quite so beneficial to the trade as was expected. Bradford market is still slow and prices weak, particularly for merino futures. Crossbreds are not much stronger, and new contracts not coming forward very plentifully. Yarns, however, are flourishing, and spinners, under heavy contracts, have found their position much better because of the easier raw materials. Consumption is good, and deliveries satisfactory for the time of the year. The manufacturing trade, on the other hand, is considerably upset by the fall in prices. Merchants are holding back their contracts in the hope of getting manufacturers to lower their rates, but these still suffering from the small margin of profit caused by the high prices of wool, do not feel disposed to climb down now that they see a chance of making things even. Spring trade with foreign and colonial countries—bar the United States—is good, and in spite of the report that German low goods are said to be coming here more freely, our exports to that country of fine woollens and worsteds more than hold their own.

Cotton (from our Manchester correspondent).—The feature of our market this week has been the hardening tendency of American cotton in New York and Liverpool. This upward movement has caused rather more inquiry for yarn and piece goods, and, on the whole, some improvement in the business passing can be recorded. There is considerable uncertainty as to the probable extent of the American crop. Most of the estimates now being published, however, centre round 11,750,000 bales. The higher prices current this week have to some extent been brought about by the improved financial situation in America. The wages dispute has been a disturbing factor, but during the last few days the feeling has been growing that a settlement would be arrived at before the notices ran out at the week-end. In various directions a more extensive inquiry for piece goods has been dealt with. One well-known firm of manufacturers sold very heavily late last week. Orders booked will keep them well occupied with work for several weeks. China has shown rather more life, fair sales being reported in shirtings. The all-round demand for India is rather better. Fine goods and shirtings have been in request, and some sellers have not done at all badly. Only a miscellaneous inquiry is coming through for the nearer markets of the Continent. Rumours of a large house in Constantinople being in financial difficulties has caused some anxiety. It is not expected, however, that the matter will vitally affect Manchester. Manufacturing at the present time is undoubtedly a poor business. Margins between yarn and cloth are very narrow, and in some cases have entirely disappeared. Printing cloths have again moved off slowly, and although certain makers have been willing to sell at a loss, very little fresh business has come round. Heavy goods such as T-cloths and Mexicans have dragged in demand. Home trade cloths have been in some request, but buying on the whole is being deferred. Distribution in the wholesale houses is of fair dimensions. American yarns for home use have moved off quietly, with slight irregularity in quotations. Spinners have not found it easy to obtain higher rates to meet the advance in the raw material. The production of yarn is increasing, but all brought upon the market seems to be well absorbed. Export yarns have been in rather improved demand for India. Bolton spinnings are generally unchanged, with a quiet, steady business. Sir Jacob Behrens and Sons, in their report, remark that the speculative element has been very pronounced during the past week, and American cotton shows a substantial advance. This advance was accentuated yesterday by the covering of shorts, a more active spot demand on the probable settlement of the threatened strike in Oldham and lower crop estimates. The Government crop estimate is expected to be less than 11½ million bales, although the average of private estimates is above that figure. Egyptian cotton is quiet, but quotations of "brown" are raised ⅛d., except "fine," which is ⅛d. dearer.

Coal.—There is nothing of importance to notice in the coal trade this week. Exports in many places show a falling off, but not more than is to be expected at this season, and home demand for some classes of coal is not increasing. Coke and coking coal are both weaker, and the variable weather has not stimulated the house varieties. But as a whole business is very satisfactory, considering the depression in other trades, upon which manufacturing and steam coals generally depend.

Copper.—A dull demand from consumers and weak cables from the United States, where large producers have tried to revive trade by lowering prices, has had the effect of sending prices down in this market. One or two small rallies occurred in the warrant market, and a fair business was done in them, but prices dipped at one time to £60 15s. for cash and £61 10s. for three months. A recovery to-day, however, left them at £61 7s. 6d. and £62 7s. 6d., reducing the losses on the week to £1 7s. 6d. and 15s. respectively.

Tin.—The market was quiet and sagging during the first three days, and though firmer cables from the East, where business was reported at £13 6s. 1d. c.i.f. London, had a certain steadying influence "Bear" pressure and a lack of buying orders sent cash metal as low as £133 7s. 6d. Yesterday prices again advanced, and closed at £134 15s. for spot and £135 15s. for three months.

Iron and Steel.—Hematite demand continues to fall off from all quarters, and consequently quotations are again weaker. Mixed Bessemers are still at 69s. per ton nominally, and the prompt price for warrant iron is 67s., but for three months it is 66s. 6d. nett, showing that those who know the trade best look for a still quieter state of things. Makers of Cleveland pig-iron continue to lessen their production, though consumers are still demanding more than is produced and Connal's Stores continue to be drained. But the poor trade is likely to continue throughout the winter, and by reducing their production makers will keep their position as good as possible to help to reduce the cost of production probably. All the year prices of materials, coals, &c., have been higher in proportion to those of the iron itself, and when we learn from the *Engineer* that by the end of the year the consumption of Durham coke will be 10,000 tons per week less than it was at the end of September, it is certain that the price of it must weaken. Demand for steel is also very small. Foreign markets have not come up to expectations of late, though in the lighter makes of steel, engineering tools, &c., a very fair business is being maintained.

Tea.—Offerings of Indian teas were moderate this week at 28,230 packages, and the market was rather dearer in consequence. Advanced rates, Messrs. W. J. and H. Thompson's circular tells us, were mostly confined to the lowest descriptions, common leaf being now 7½d., and nothing to be had under that figure. But all teas up to 8d. were keenly competed for. Bidding for better grades was comparatively quiet, and prices remained unchanged, and the average of the whole sale of 25,657 packages on garden account was 8.36d., or rather less than last week. Last year at the same time it was 8.06d. for 41,287 packages sold. Ceylon catalogues comprised 20,100, but competition was very fair for the heavier auction, and prices remained firm. 7½d. was the lowest quotation for tea of any sort, and up to 8d. in advances of ½d. per lb. was frequently shown. In finer grades, except for the best invoices, a slight irregularity was shown, the average for the whole sale coming to 8.57d. against 8.58d. last week and 8.79d. in 1906. Java sale of 2,842 packages passed at rates fully up to those current last week, 108 packages from "Goalpara" averaging 10d. per lb.

Sugar.—Prices for May beet experienced a sudden advance this week from 9s. 8d. to 10s. 0½d., and though a reaction set in to 9s. 9d., owing to a temporary fear that Russian sugar could be admitted here before September, 1908, yesterday's close showed that 9s. 10½d. was being paid. The rise, says Mr. Czarnikow, is based on bad crop figures from France, disappointing results from Germany, and confirmation of unfavourable news from Cuba, as well as on the maintenance of the Convention. On the other hand, the news from America remains dull; New Orleans, with its larger crop and the financial difficulties, seems to be more than 2s. per cwt. below New York for cash purchases, involving a loss on currency. There is besides very little Indian demand here, in spite of bad crops, and Russian sugars are offering, and can be held in the Baltic considerably below German or French values. French speculators are buying partly because French stocks are much lower than in previous years, but they were then much too high compared to other countries. During next year a good proportion of white sugars for September-October will probably be supplied by Russia, whilst France will have to keep near exporting prices before that time, though she has been running away from them lately. There is, of course, no immediate hurry for this; in fact, export prices may go up to French quotations, but if sugars are kept till the end, final prices will suffer.

The American market opened with a decline of .15 cents upon raws, centrifugals being quoted 3.62½ cents, the reason for the drop seeming to be that Louisiana planters are finding the difference in value between refining and grocery grades too small for the latter to be profitable, and are making double their usual quantity of refining, which are being bought by New York at the parity of 3.50 to 3.60 cents. Landings for the three ports were 40,000 tons, meltings 28,000 tons, leaving stocks at 167,000 tons.

Mr. Czarnikow gives the terms of the proposed Convention with Russia, which have now been published. The surtax need not be altered, but Russia, in addition to her usual exports to Finland, and by land to Northern Persia, Asiatic Turkey, &c., may export to countries where Convention sugars compete a maximum quantity of 300,000 tons between September last and August, 1909, also a yearly maximum of 200,000 tons in the four subsequent years. This would give a total in six years of 1,100,000, but the total for the entire period must not be over 1,000,000 tons. According to the terms of the original Convention, other countries can only join from September 1 following the application. In the meantime Russia can, of course, export to German, Baltic, and Austrian bonded stores, but such exports would have to be deducted from the 300,000 tons allowed for this and next season combined.

COMPANY MEETINGS.

J. & P. COATS (LIMITED).

The 17th annual ordinary general meeting of J. and P. Coats, Limited, was held yesterday in the Christian Institute, Glasgow. Mr. Archibald Coats, chairman of the company, presided over a large attendance of shareholders. The other directors present were:—Sir Thomas Glen-Coats, Bart., M.P., Sir James King, Bart., Sir William Arrol, Messrs. Charles Lewis Brook, J. O. M. Clark, Peter Coats, George Coats, Peter Mackenzie Coats, William Hodge Coats, P. Herbert Coats, Ernest S. Coats, T. J. Hirst, O. E. Philippi, E. A. Philippi, and W. P. Stewart.

The Chairman, in moving the adoption of the report and accounts, said:—The profit for the past year has been somewhat larger than that of the previous one, but considerably in excess of the average of former years. However, as I have previously pointed out, these fluctuations do not denote any material change in the earning capacity of the business, and no significance should, therefore, be attached to them. In the past year the enhancement in the value of stocks and in the rate of interest on money lent have been a set-off against dearer cotton, higher wages, and other adverse influences; moreover, some of the Continental companies in which we are interested have paid larger dividends. Whether we shall, in the financial year upon which we have now entered, be similarly favoured by increases counterbalancing the greatly enhanced cost of manufacturing, it is impossible to foresee, nor should it give us any serious concern were it otherwise. We have not at any time divided the whole of our profit, and need therefore not fear being compelled to reduce the distribution in a less profitable year. It has been suggested that, in view of the large reserves which have been accumulated, the quarterly dividend might well be increased from 1s. to 1s. 6d., and the board sees no serious objection to this being done, provided the change is not misinterpreted, and does not lead to the supposition that there will be the same chance of a bonus after the close of the year. I should, however, add that the board could not recommend the increase in the quarterly dividend unless the whole amount to be distributed before the accounts are made up had been previously placed to the dividend reserve fund, which at present amounts to only £900,000. In the report before you the board proposes to carry £500,000 to the general reserve fund, but, if it were decided to increase the quarterly distribution during the currency of the present year, said amount of £500,000 should be carried to dividend reserve fund, instead of to the general reserve fund, and if you desire this to be done it will be necessary to move a resolution to that effect. (Applause.) As you have seen from the report, the board, for the reasons stated therein, recommends your electing Colonel R. C. Mackenzie one of the auditors of the company. I sincerely regret to have to inform you that since the report was issued we have sustained a loss through the passing away of our much-esteemed colleague Mr. Stewart Clark, a sad event which your directors greatly deplore. (Hear, hear.) The Chairman then formally moved:—"That the report and accounts for the year ended June 30, 1907, as submitted to this meeting, be and are hereby adopted, and that the payment of the dividends stated therein and of a bonus of 2s. per share on the ordinary shares, and the appropriations to various funds, be and are hereby confirmed: and that, instead of the appropriation of £500,000 to reserve fund, this amount be carried to dividend reserve fund." (Applause.)

The Chairman: I presume by your applause that this is carried.

A gentleman rose from the audience and said: Being an Irishman, Mr. Chairman, and in favour of law and order, I certainly beg formally to second the motion proposed by you. (Laughter and applause.)

The resolution was then adopted.

Mr. W. P. Stewart, the secretary of the company, said that to prevent misunderstanding as to the payment of the first quarterly dividend, now the resolution had been passed, he might explain they had already arranged the first quarterly dividend to be paid at the end of this year, along with the bonus they had just agreed to, so that they could not increase the quarterly distribution from 1s .to 1s. 6d. until the first payment of the New Year—that was, on March 31. They would pay 1s. then in addition to the ordinary 1s., which would make up the 6d. due on December 31. Of course, the additional 6d. would be paid on June 30 and September 30.

Sir Thomas Glen-Coats moved that Sir James King, Bart., Messrs. J. O. M. Clark, George Coats, T. J. Hirst, O. E. Philippi, and W. P. Stewart, who retired at this time, be re-elected directors of the company.

Sir William Arrol seconded, and the motion was adopted.

On the motion of Colonel Clark, Colonel R. C. Mackenzie, of Messrs. Aitken, Mackenzie, and Clapperton, Glasgow, and Mr. David W. Kidston were appointed auditors of the company for the current year, and it was remitted to the directors to fix their remuneration.

A vote of thanks was afterwards passed to the chairman, and the proceedings terminated.

KAFFIRS CONSOLIDATED.

The ordinary general meeting of the Kaffirs Consolidated Investment and Land Co., Limited, was held on Monday at the Cannon Street Hotel, Cannon Street, E.C., Mr. Robert Warner (managing director) presiding.

The Secretary (Mr. J. A. Bush) having read the notice convening the meeting and the report of the auditors,

The Chairman said: You will see from the report that the profits come to £4,416 for the twelve months, which, with the balance brought forward of £12,967, brings up the amount to the credit of the profit and loss account to about £17,383. This amount we propose to carry forward to next year. We feel that the shareholders have every reason for congratulation that the results are so satisfactory, in view of the acute commercial depression which prevailed during the whole of the year and the absence of any opportunity for carrying out any new business. The past year has been probably the most gloomy and depressing that we have had since the formation of the company. You will remember that about three months ago the South African market began to look up. It appeared at that time to be recovering, but then we had the terrible collapse in the New York money market, which upset everything here as well as in that country, and the consequent advance of the English Bank rate to 7 per cent. It is evident that this must check all new enterprise and render it impossible to proceed with any new business whatever. In our report we state that the British South Africa Tobacco Plantations, Limited, has progressed very well during the past year, and that there is every hope of its yielding satisfactory results very shortly. The acreage under cultivation has greatly increased, and improvements are being made in the development of the property. We had the opportunity of buying up the estate of an insolvent debtor in Rhodesia, and this represents the only new business into which we have ventured during the year. This estate was going at such a comparatively low price that, although we had previously made up our minds not to go into anything new, we were tempted to purchase it, and I am certain we have made a very good bargain. The estate consists of six town sites in Salisbury, including two substantial buildings, fully tenanted, about 5,800 acres of farm land, only two miles from Salisbury, and a farm near Victoria of about 6,000 acres. The next paragraph in the report refers to the town sites in the City of Salisbury, Rhodesia, which are owned by the Salisbury Building and Estates Company, in which we have always held a very large interest. Considerable improvement has taken place in Salisbury during the past year, from both the commercial and residential points of view. Every house owned by the company is now let at a remunerative rental, and rents are being raised whenever existing leases expire. I need not weary you by speaking of the increase which has taken place in the output of gold, silver and other metals in Rhodesia, but there certainly has been a very substantial increase. Another point which I do not remember to have seen publicly dealt with is the great possibilities offered by Rhodesia as a stock-producing country. I recently had the pleasure of meeting a gentleman who is thoroughly conversant with stock-raising in Texas, the Argentine and Australia, and he assured me that in ten years' time Rhodesia would be the biggest cattle-producing country in the world. As usual, we refer in our report to the Delagoa Bay property. Well, times in that part of the world have been so bad during the year that we have done nothing and have spent nothing. With regard to the financial side of the business, we propose to write off at once £30,000 from the reserve fund, which will amply cover all depreciation on market values, and we shall still have £17,000 at the credit of our profit and loss account. A large shareholder has asked me to explain how much of the profits shown in the accounts have been made by speculating on the Stock Exchange. In answer to that I may say that we do not speculate at all; we never have, and we never shall—at least, so long as I am alive. (Hear, hear.) There is one other matter that I would like to refer to before I conclude. You will remember that it is proposed to erect a memorial in South Africa to the memory of the late Mr. Cecil Rhodes. I do not think that we should allow this opportunity to pass without contributing a small amount towards this memorial. That being so, we propose to ask your sanction to contribute 10 guineas. (Hear, hear.) I now formally propose the adoption of the report and accounts.

Mr. A. Oxley seconded the resolution, which was carried unanimously, and the proceedings terminated with a vote of thanks to the chairman and the board.

MIDDLEBURG STEAM COAL.

The second ordinary general meeting of the Middleburg Steam Coal and Coke Co., Limited, was held on Wednesday at Winchester House, Old Broad Street, E.C., under the presidency of Mr. Alan Cadell, C.S.I., the chairman of the company.

The Secretary (Mr. Edward J. Townsend) having read the notice convening the meeting and the auditor's report,

The Chairman said: You will see from the balance-sheet that we have issued shares to the extent of £146,703, and when the balance of the shares in the hands of the liquidator has been completely issued we shall have in hand a balance of £21,100 to fall back upon in the event of money being required. If we had been able to issue more shares, we should have got to work more rapidly in the direction at which we have aimed, and we should have carried out the improvements at once. However, our progress, although not so rapid as we at one time hoped it would be, has been steady and, we hope and trust, satisfactory. We have not been successful in effecting all the economies which we had hoped to do when the company was reorganised, but we have made, I think, very good progress in that direction. The Kimberley charges have been saved: the

bank charges will now be very largely reduced, as, from the beginning of last month, we pay ½ per cent. per annum instead of the old high charge of 1 per cent. per mensem, and we have improved the position of the mine, and adopted as many labour-saving appliances as we possibly could with the funds at our disposal. In fact, of all the recommendations made to us, there is only one which remains to be carried out, and that has reference to the electric lighting, but we shall before long be in a position to consider that matter. The year began with the price of coal at about 5s. per ton, and it ended with the price being at about 4s. In addition to this steady falling off in the price of coal, we had the labour trouble which began in November, and reduced our output at a time when prices were fairly high. It ended to a large extent in March, when, having failed, owing to the intervention of the Portuguese Government, to secure labour from their territory, we had to import labour from the Cape Colony. This we found to be exceedingly satisfactory, but the cost of our raising coal in the month of March was much higher than it had ever been before. The steady fall in price necessarily attracted the attention of all coalowners in South Africa, and as a result of repeated conferences a Coalowners' Association was formed, and after much consideration and on the advice of our local committee, and that tendered to us from other quarters, we decided to join the association. It must not be thought that the object of this association is to obtain monopoly prices. The price obtained during the present year, which began quietly, has been about 5s. 3d. per ton, which is almost identically the same price that we obtained in 1905, and for good coal it is a particularly low rate. It is somewhat difficult to do what some shareholders have asked us to do, namely, to predict as to the future. Prophesying is a very hazardous business—this time last year we were particularly hopeful as to the results of the business of the year under consideration—but I may say this much, that for the three months for which we have the accounts we have been doing fairly well, and we hope, if the very moderate price for coal which now prevails is maintained, we shall make quite a satisfactory profit when the year is completed. In the meantime we have improved our position very distinctly. Our financial position is sound; we have brought the machinery and appliances at the mine to a high state of perfection; and I think we can look forward, if only prices are maintained at a reasonable figure, to a fair measure of success during the year which has now begun. With these remarks I beg to move the adoption of the report and accounts. (Applause.)

Mr. Alfred T. Macer (managing director) seconded the motion. In reply to a question by Mr. Walbrook as to the prospects of the company doing a large bunkering trade at Delagoa Bay, he stated that they were asking the Government to reduce the freight rates to that port, and if their wishes were realised the company would be able to sell coal at something under 10s. per ton.

The resolution was carried unanimously.

SLATERS, LIMITED.

The thirteenth annual general meeting of Slaters, Limited, was held on Monday at the Hotel Cecil, W.C., under the presidency of Mr. John W. Reacher (chairman of the company).

The Secretary (Mr. F. Y. Northcote) having read the notice convening the meeting and the auditors' report,

The Chairman said: It is with feelings both of satisfaction and regret that I address you—satisfaction that under conditions in many ways adverse to this business that we have managed to do so well, and regret that the hopes the directors cherished of being able to come before you to-day with a much larger dividend have been defeated. But, after all, I believe that this defeat is only temporary. Had we thought it fit in the best interests of the shareholders, we might have shown better results in the way of an increased dividend, for out of revenue we have spent money fairly generally upon the maintenance and improvement of our property, and such expenses might have very readily and reasonably been postponed. Last year I referred to the high prices that we were paying for many of the principal articles of consumption, and, unfortunately, during the last twelve months, instead of there being any relief, they have only added to our difficulties. Then there is competition. Well, we always expect to have competition, but it has been growing in intensity and to a remarkable degree during the last few years. I may be mistaken, but I am inclined to think that we are experiencing the worst effect of competition, and if there is a change coming at all it will be for the better. Turning to the abstract of the balance-sheet, you will observe that our share capital remains the same as last year, and it will need something very alluring to increase this. As to our reserve fund, I am very anxious to see that increased to £100,000, and I think that with care we shall be able to manage it. Leases reserves are about £7,000 higher this year owing to the appropriation which, with your permission, we make this year. As to the assets side of the balance-sheet, the item freehold and leasehold premises, goodwill, furniture, &c., stands at about £5,000 more than last year. Investments and loans are about £1,000 less, owing to money having been paid off and to our having made some change in our investments. Turning to the profit and loss account, you will notice that we have made £850 more than last year. This is not a large sum, but one which I consider, under all circumstances, to be satisfactory. Our expenses are about £1,000 more than last year, due to the large appropriation we have made to leases reserves and to depreciation of machinery. The whole result is that, after providing for the preference shares dividend and the interim dividend at the rate of 10 per cent. per annum, we have a sum left which will allow us to pay a final dividend of 15 per cent. and to carry forward £7,545.

Mr. William Kirkland seconded the motion, which was unanimously adopted.

NEXT WEEK'S MEETINGS.

Monday, December 9.

A. and R. Thwaites.—Dublin, noon.
Barnum and Bailey.—Cannon Street Hotel, noon.
Djebel Charra Mining.—Winchester House 2.30 p.m.
East Rand Mining Estates.—Winchester House, noon.
Etna Development.—Salisbury House, noon.
Khedivial Mail Steamship.—Winchester House, noon.
Metropolitan Gas Meters.—Winchester House, noon.
P. Phipps and Co.—Northampton, 3 p.m.

Tuesday, December 10.

Abosso Gold Mining.—River Plate House, 2.30 p.m.
Arnold, Perrett, and Co.—Wickwar, 2.30 p.m.
Aron Electricity Meter.—Winchester House, noon.
Continental Gas.—7, Draper's Gardens, E.C., 2 p.m.
Daggersfontein Gold Mining.—3, Gracechurch Street, E.C., 2.15 p.m.
Daggersfontein Prospecting,—3, Gracechurch Street, E.C., 2.45 p.m.
Dorman, Long, and Co.—Middlesbrough, noon.
Elysée Palace Hotel.—Cannon Street Hotel, noon.
Esperanza Nitrate.—Winchester House, noon.
Henderson's Nigel.—3, Gracechurch Street, E.C., noon.
Ingall, Parsons, Clive, and Co.—Birmingham, noon.
Kalgurli Gold Mines.—8, Finch Lane, E.C., 12.30 p.m.
Lloyd Copper.—Winchester House, noon.
London and River Plate Bank.—River Plate House, noon.
North Worcestershire Breweries.—Winchester House, 4 p.m.
Oroya Black Range.—Salisbury House, noon.
Peninsular and Oriental Steam Navigation.—122, Leadenhall Street, E.C., 1 p.m.
Russian Petroleum and Liquid Fuel.—Winchester House, 2.30 p.m
Southern Indian Railway.—55, Gracechurch Street, E.C., 1.30 p.m.
Taquah and Abosso Gold Mining.—River Plate House, 3 p.m.
United Rhodesia Goldfields.—Winchester House, noon.

Wednesday, December 11.

Alton and Company.—Derby, noon.
Battlefields Rhodesia.—Salisbury House, 12.30 p.m.
Cape Copper.—Cannon Street Hotel, 3 p.m.
Cassel Cyanide.—Glasgow, noon.
Duff Development.—50, Old Broad-street, E.C., noon.
Esperanza Nitrate.—Winchester House, 2 30 p.m.
Giant Mines of Rhodesia.—Cannon Street Hotel, 2.15 p.m.
Grand Junction Canal.—21, Surrey Street, W.C., 2 p.m.
New Belgium (Transvaal) Land and Development.—Winchester House, noon.
New York Breweries.—Winchester House, 12 30 p.m.
Encinillas Mines.—Cannon Street Hotel 11 a.m.
Sanwi and Baoule Gold Mines.—16, Great Winchester Street, E.C., 1.15 p.m.
St Louis Breweries.—Winchester House, 2.15 p.m.
Sudan Goldfields.—6, Queen Street Place, E.C., noon.
Talisman Consolidated.—Winchester House, 12.30 p.m.
Victoria Falls Power.—Salisbury House, 11.30 a.m.
Wenlock Brewery.—Winchester House, 1 p.m.

Thursday, December 12.

Argentine Transandine Railway.—Winchester House, noon.
Bentley's Yorkshire Breweries.—Woodlesford, 12.30 p.m.
Birkenhead Brewery.—Birkenhead noon.
British and Chinese Corporation.—Cannon Street Hotel, 2.30 p.m.
Clon Curry, Limited.—Salisbury House noon.
Consolidated African Copper Trust.—Salisbury House, 2.30 p.m.
Cooper, Cooper, and Johnson.—Winchester House, noon.
Delhi Electric Tramways and Lighting —Winchester House, noon.
Gilbert Gold Mine.—138 Leadenhall-street, E.C., noon.
Oceana Consolidated.—Cannon Street Hotel, noon.
Phœnix Assurance.—19, Lombard Street, E.C., noon.
Showells Stockport Brewery.—Stockport, noon.
Stock Conversion and Investment Trust.—Winchester House, 2 p.m.
Wolverhampton and Dudley Breweries.—Wolverhampton, noon.

Friday, December 13.

Amalgamated Press.—Hamilton House, 2 p.m.
Argentine Great Western Railway.—Winchester House, noon.
Bombay, Baroda, and Central India Railway. Cannon Street Hotel, 1 p.m.
British and Japanese Finance.—19, St. Swithin's Lane, E.C., 2 p.m.
Chicago Breweries.—Winchester House, 11.30 a.m.
De Mello Brazilian Rubber.—Salisbury House, 11 a.m.
Enterprise Gold Mining and Estates.—Salisbury House, noon.
Gaika Gold Mining —Salisbury House, 1 p.m.
Island Trading.—Winchester House, 12.30 p.m.
New Nimrod.—Salisbury House, noon.
Pacific Oilfields —Winchester House, 2.30 p.m.
Pillsburn-Washburn Flour Mills.—Winchester House, 11.30 p.m.
Samuel Allsopp and Sons.—Cannon Street Hotel, noon.
Smithfield and Argentine Meat.—Winchester House, noon.
Stretton's Derby Breweries.—Winchester House, 2.30 p.m.

RAILWAY TRAFFIC RETURNS.

FOREIGN.

Alberta Railway and Irrigation.—Earnings for the 9 days ended Nov. 30, $9,753, increase $4,565; aggregate from July 1, $114,046.

Argentine North Eastern.—Traffic receipts for week ended November 1, £2,665, decrease £46; aggregate from July 1, £52,337, decrease £2,273.

Assam Bengal.—Traffic receipts for week ended November 2, Rs. 1,07,647, increase Rs. 8,248; aggregate from July 1, Rs. 17,55,672, increase Rs. 1,09,715.

Bilbao River and Cantabrian.—Traffic returns for November, £9,071, decrease £2,123; aggregate from January 1, £100,047, decrease, £12,676.

Buenos Ayres Central.—Gross receipts for Sept. and Oct. £23,746, increase £5,137.

Canadian Northern Railway.—Traffic receipts for 9 days ended Nov. 30, $275,200, increase $44,100; total from July 1, $4,506,800, increase $1,126,900.

Egyptian Delta.—Traffic receipts for week ended November 16, £6,370, increase £589; aggregate from January 1, £165,644, increase, £18,074.

Lucknow Bareilly Railway.—Traffic receipts for week ended November 2, Rs. 22,738, decrease Rs. 5,168; aggregate from July 1, Rs. 4,69,622, increase Rs. 45,738.

Midland Uruguay.—Receipts for month of October, £6,600, increase £864; aggregate from July 1, £23,430, increase £2,000.

North Western of Uruguay.—Traffic receipts for Oct., $25,400, increase $9,775; aggregate from July 1, $86,256, increase $6,284.

Quebec Central Railway.—Traffic receipts for the 4th week of November, $28,563, increase $8,356; aggregate from January 1, $936,781, increase, $90,941.

Quebec and Lake St. John.—Traffic receipts for Sept. $65,604, increase $3,149; aggregate $471,220, increase $52,696.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended November 2, Rs. 18,078, decrease Rs. 3,072; aggregate from July 1, Rs. 3,89,659, increase Rs. 45,285.

Uruguay Northern.—Gross receipts for month of Aug., £1,934, increase, £373; aggregate from July 1, £3,675, increase £105.

White Pass and Yukon Railway.—Traffic receipts for week ended November 7, amounted to $10,500.

ENGLISH.

Cleator and Workington Junction.—Receipts for week ending November 30, £1,438, increase £9; aggregate from July 1, £29,432, increase £1,569.

Cockermouth and Keswick Railway.—Receipts for week ending November 30, £746, increase £127; aggregate from July 1, £21,495, increase £797.

East London Railway.—Traffic receipts for September, £3,625, decrease £377.

East and West Yorkshire Union Railways.—Traffic receipts for the week ended November 30, £456, increase £44; aggregate from July 1, £9,627, increase £1,762.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Bath Electric.—Traffic receipts for week ending November 27, £600, decrease £85; aggregate from Jan. 1, £37,962, decrease £1,733.

Blessington and Poulaphouca.—Traffic receipts for week ending November 27, £6, decrease, £3; aggregate from July 1, £490, decrease £55.

Bristol Tramways and Carriage.—Traffic receipts for week ending November 29, £4,568, decrease £196; aggregate from July 1, £114,978, decrease £892.

British Electric Traction.—Receipts of all the Associated Companies for the week ending November 29, £25 916; 421¾ miles.

Burnley Corporation.—Traffic receipts for week ending November 30, £1,180, decrease £1; aggregate from July 1, £28,128, increase £1,232.

Dublin and Blessington.—Traffic receipts for week ending November 27, £93, decrease £9; aggregate from July 1, £3,318, decrease £103.

Dublin and Lucan.—Traffic receipts for week ending November 29, £88, decrease £12; aggregate from July 1, £3,023, increase £220.

Dublin United.—Traffic receipts for week ending November 29, £4,705, decrease £66; aggregate from July 1, £147,919, increase £30,856.

Edinburgh and District.—Traffic receipt for week ending November 30, £4,535, decrease £64; aggregate from January 1, 1907, £238,358, increase £1,652.

Hastings and District.—Traffic receipts for week ending November 28, £710.

Isle of Thanet.—Traffic receipts for week ending November 30, £234, increase £9; aggregate from Oct. 1, £2,933, increase £58.

London County Council.—Traffic receipts for week ending November 23, £29,544, increase, £3,928; aggregate from April 1, £1,071,235, increase £178,957. Miles 113½, against 112¾.

London General Omnibus.—Traffic receipts for week ending November 30, £17,765, decrease £3,121, aggregate from July 1, £457,219, decrease £46,772.

London Road Car.—Traffic receipts for week ending November 30, £2,543, increase £115, aggregate from July 1, £189,710, increase £16,915.

London United.—Traffic receipts for week ending November 29, £5,312, increase £40, aggregate from January 1, £311,190, increase £13,184.

Provincial Trams.—Traffic receipts for week ending Nov. 30 £1,351, decrease £11; aggregate from Oct. 1, £13,364, increase £537.

Rossendale Valley.—Traffic receipts for week ending November 29, £186, decrease £22.

Sunderland District.—Traffic receipts for week ending November 27, £455, increase £30, aggregate from Jan. 1, £22,426, increase £2,413.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending December 1, £1,051, decrease £7, aggregate from January 1, £55,840.

FOREIGN.

Anglo-Argentine.—Traffic receipts for week ending December 1, £18,751, increase £1,444, aggregate from January 1, £509,887, increase £76,192.

Auckland Electric.—Traffic receipts for four weeks ending November 8, £10,674, increase £946; aggregate from January 1, £114,563, increase £5,001.

Brisbane.—Traffic receipts for month of November, 1907, £13,570, increase £1,734.

British Columbia Electric.—Nett earnings for October $79,785, increase $24,629. Aggregate nett earnings, including income from investments from July 1 to October 31, $310,393, increase $56,596.

Buenos Ayres Grand National and New Tramways.—Traffic receipts for week ending December 2, £7,947.

Calcutta.—Traffic receipts for week ending November 30, Rs. 47,986, decrease Rs. 1,755, aggregate from January 1, Rs. 23,14,499, increase Rs. 1,75,732.

Cape Electric.—Traffic revenue for month of October, Cape Town, £9,780, Port Elizabeth, £2,804.

Carthagena and Herrenas.—Traffic receipts for the month of November, £2,708, decrease £2,480, total from January 1, £47,877, increase £856.

Geneva Trams.—Earnings for October, fr. 213,927: increase fr. 14,040.

Kalgoorlie Electric.—Traffic receipts for October, £3,693; aggregate from January 1, £39,925.

Lisbon Electric.—Earnings for October, milreis 119,546.

Printed for the Proprietors by St. Clements Press, Limited, No. 1

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XX.—No. 519. New Series. SATURDAY, DECEMBER 14, 1907. (Registered as a Newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first; its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHERS' NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **16s. 6d.,** or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,

"Investors' Review" Office,

Norfolk House, Norfolk Street,

London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

Our Foreign Trade to the End of November.

Again the value figures look excellent. Imports rose by £1,389,000 or 2.5 per cent. to £57,145,000, and exports were £2,887,000 or 8.7 per cent. up at £35,862,000, but there was a decline of £1,101,000 or 15.9 per cent. in the value of the re-shipment of foreign and colonial merchandise, which was only £6,132,000 last month. For the eleven months, however, the total of the re-exports is up £7,895,000 or 10.2 per cent. to £85,252,169, and the increases in our ordinary imports and exports are quite imposing. Imports have risen by £36,530,000 or 6.2 per cent. to £589,912,000, and exports have expanded no less than £49,199,000 or 14.3 per cent. to £393,403,000, so that altogether, and without including bullion, the aggregate trade of the eleven months was valued at about £1,018,000,000, a total far surpassing that of any previous year in the country's history.

Satisfactory as these figures are, it would be a mistake to hold to the opinion that our trade is still expanding. It has, on the contrary, begun to decline. At present the reaction is in quantities much more than values, but if quantities continue to recede values are certain to follow. In our imports, for instance, which have risen only 2½ per cent. on the month, values are still in many cases above those of the same month last year, notably in cereals, which are distressingly dearer throughout. The quantity of wheat imported last month was 0.7 per cent. less than in November, 1906, but it cost us 31 per cent. more. Barley again has risen less than 19 per cent. in quantity and nearly 51 per cent. in value. Indian corn is up 49 per cent. in quantity and 92 per cent. in value. Oats, too, the quantities of which are identical for the two months compared, show an increase of nearly 12 per cent. in the price paid. This characteristic of the returns is not universal, but there are very few things of importance received from abroad which have cost us less than they did a year ago. Amongst these things copper figures conspicuously with an increase of over 11 per cent. in the quantity imported, accompanied by a decrease of nearly 5 per cent. in the price paid. There has been a decline also in the prices of tin, jute, and of nitrate of soda. The value of live cattle imported has also fallen off slightly compared with the numbers, and we have paid less for hides imported, as well as for meat and fresh mutton, but sugar has been dearer. Among the commodities that have fallen however copper and tin were at altogether excessive heights only a little time ago, and we should not lay any stress upon a relapse in these now were it not accompanied by indications elsewhere that the tide has turned. Before long the more general decline in quantities must be followed by lower prices, and only when these have gone down can we begin to look for a genuine trade revival.

Exports show the same characteristics. Prices alone may be said to account for the fine display made by the November aggregates. Take coal as an example. The quantity of this particular article sent out last month increased, it is true, by 17.3 per cent., but the increase in the value exceeded 48 per cent. This is the most conspicuous, as well as in several respects the most weighty, increase of all, but it cannot

now last very long. All our principal customers for coal in Europe have been heavy buyers during the past month, but the probability is that most of them will now be satisfied with less. At best the shipments will only keep up until the existing contracts have run off. Germany, for example, took 935,426 tons last month as against 691,494 tons in November, 1906, and 685,236 tons in November, 1905. But the present state of German industry warns us that this hitherto growing demand must slacken off, and we fear the same holds true of France, which last month also bought 963,922 tons chiefly of large coal. The demand from that quarter, as well as from Spain, Italy, Sweden, Denmark and Russia, all of which took more last month than in the same month of either of the two preceding years, will fall off, and the decline will be sure to bring lower prices, not in coal only, but in other exports, especially in leading lines of manufactures, some of which, such as iron and steel, electric machinery, worsted tissues, jute and linen piece goods, leather, &c., &c., already give indications of the beginning of reaction, and they do this because whenever business falls off quantities begin to shrink before prices. Whatever syndicates may do, such as the United States, as well as Germany and other Protectionist countries seek salvation in, they cannot overcome the natural laws of supply and demand, and if they maintain prices against a diminished and diminishing consumption they invite their rivals to come in and displace them.

Our textile industries are bound to suffer presently with the metal industries, although as yet they have not done so to any extent. Still, and in spite of an increase in the aggregate exported, a beginning of weakness is shown in the more or less reduced shipments of cotton tissues to China, Egypt, Turkey, Foreign West Africa, Brazil, and the Argentine Republic. Last month's total exports, however, came to fully 12,000,000 yards more than in November, 1906, but if the price had remained identical we should have seen a barely noticeable money gain under this head, whereas the increased value was upwards of 10 per cent. last month as against less than 3 per cent. increase in quantity. Woollen manufactures are also dearer, and price more than quantity has contributed to the flourishing appearance of the November figures. Of woollen and worsted yarn, for instance, 4.4 per cent. more in quantity was exported, but the increase in the value was 8.3 per cent., and woollen and worsted tissues also sold at slightly better prices, but not by any means at an improvement equivalent to the increased cost of the raw material. We imported, for instance, 38.5 per cent. more in quantity of sheep and lambs wool, but the increase in value was nearly 42 per cent., whereas the increase in woollen tissues exported was only 2.2 per cent. compared with an increase of 1.8 per cent. in the quantity, and exports of worsted tissues fell off 2 per cent. in quantity, while the value actually declined 2.6 per cent., these contrasts thus leading to the inference that business has ceased to be profitable in these directions.

Our exports of machinery and millwork can hardly yet be said to be giving unpleasant indications of slack times at hand, for we sent out 6,110 tons of locomotives last month as against only 4,671 tons in November, 1906, and 5,181 tons in the same month of the preceding year. The whole of this increase, however, is due to countries in South America and British India, orders from which are paid for by capital raised in the United Kingdom. We have now no trade at all in locomotives with the principal countries in Europe, and cannot help feeling that this is to no small extent the fault of our own manufacturers, whose lack of adaptability and of consideration for their customers has lost us this and many similar kinds of business. Then the decline in agricultural steam-engines is conspicuous with all enumerated countries, except British India, although we sent a little more of that class of article to the Continent of Europe, and it is to countries in South America, together with British India, that we chiefly owe the maintenance of our exports of steam-engines of other descriptions. Our exports of general agricultural machinery have not been maintained, in spite of a slightly increased demand from South America, and the improvement in the exports of mining machinery for the month is mainly attributable to India, Australia, and unenumerated countries. Textile machinery, however, continues to be a flourishing branch of export, and the value sent out last month was nearly £715,000, Japan being a large buyer, as well as Germany, France, and British India. Orders from the United States fell off, however, and also from China. It cannot, therefore, be conclusively proved from these figures that

Excess value of imports over exports	148,069,869	132,635,127	113,370,158	— 19,264,959

The values of the imports represent the cost, insurance, and freight, or, when goods are consigned for sale, the latest sale value of such goods.

The values of the exports represent the cost and charges of delivering the goods on board the ship, and are known as the "free on board values."

this great and most valuable branch of the country's export trade has begun to decline, but sections of it have done so, and in the present state of the world we fear others must follow, because so much of the prosperity shown is credit-induced. We must also look for a falling off in the value of new ships exported, although last month's figures were excellent, the number of vessels exported being 130 against 110 in November, 1906, and the value £480,887 against £268,094. For the eleven months also the value is higher, but not conspicuously so, and the complaints heard in our shipyards of lack of new orders point to a dull time in the coming year.

Bullion movements were interesting last month, and although the figures of the Customs Department relating thereto are never complete they none the less give some idea of what has been going on. They show that imports of gold amounted to £5,830,000 and exports to £12,978,000 during the month. Taking the eleven months, however, the figures still show an excess of rather more than £1,000,000 in imports over exports, imports having been £7,400,000 higher as against an increase of only £6,558,000 in the exports. Over the whole period it follows that the movements of gold have done little towards that approximation of the two sides of our foreign trading account, which has been so conspicuous for some time past. The movements of silver out and in have rather tended to increase the divergence than to diminish it, and consequently the disproportionate growth of merchandise exports and re-exports shown is rather suggestive of over-trading. Two years ago, for instance, export values fell short of import values, bullion and everything included, by £148,070,000, for the eleven months ended with November, but in the current year the excess is only £113,370,000, or nearly £35,000,000 less, and it is £19,265,000 less than the difference a year ago. In other words, while imports for the current year have risen by £42,370,000, exports, always including bullion on both sides of the account, have increased by no less than £61,635,000. What are we to infer from this if not that the export trade of the country has been to some extent over-stimulated? It can scarcely be that the profits of our imports have diminished to such an extent as to have curtailed our buying power, for that has increased, as is shown by the remarkable increase in the value of our imports. Can it be that we have been forcing goods out upon customers in various parts of the world to an extent in excess of their immediate consuming power, as we have undoubtedly been doing of late in China, and that the distended export trade which has been so dazzling in its magnitude for many months back is to a disquieting degree a production of credit? Time will show, but the question is one well worth keeping in mind.

The World's Wheat Crop.

Always interesting and authoritative, the review of the cereal year published by the *Times* this week is of unusual attractiveness and value because of its retrospect. In the United Kingdom the acreage under wheat has steadily fallen off, one may say for the best part of a century. At any rate, the computation appears reasonable that in the course of this period the area devoted to this cereal has fallen off by two-thirds, and if improved cultivation had not brought some compensation our present dependence upon imported wheat would have been more abject than it is. But the yield per acre has so increased, thanks in some degree to better cultivation, and also to the abandonment of all the poorer soils, that the production has fallen off less than half. Put in another way, it is estimated that about 4,800,000 acres were devoted to wheat in the United Kingdom a century ago, when the yield averaged no more than 16 to 20 bushels an acre, whereas now the 1,625,000 to 1,755,000 acres under wheat yield over 33 bushels per acre. Twenty bushels to the acre is the figure given for 1807, and it was then regarded as a large yield. Ten years later an average of 16 bushels was the product, and only towards the middle of last century (in 1847) was so high a figure as 30 bushels to the acre reached. That was described as being considerably over the average, and even ten years later still a 27 bushels per acre yield was described by the *Times* as being "over the average." Now, however, anything under 30 bushels per acre is regarded as an unusually poor return, and during the years that have elapsed of the present century the average has been slightly above 30 bushels to the acre, the lowest yield being 26.82 bushels in 1904 and the highest 33.97 bushels, the estimate for the current year. This year's wheat, however, will be of inferior quality—less of it, that is, will be available for milling purposes and more for feeding cattle, &c. The writer of the article estimates that the probable wheat production in Great Britain in the mid-Victorian era touched 120,000,000 bushels. For the current year it is estimated at only 55,209,328 bushels, but it rose above 59,000,000 bushels last year. The area cultivated, however, is, on the whole, still tending to shrink, and was fully 130,000 acres less this year than last. Compared with 1901, the decrease is almost 220,000 acres. Were prices, however, to be kept up at about their present height, it is probable enough that wheat cultivation in England would again expand. In September last year—at the beginning of the cereal year, in other words—the average price of wheat in Mark Lane was 27s. 5d. per bushel, and at the close of the year in the end of August last it had risen to 33s. 2d. per bushel. It is still tending upwards, for the world's harvest is a poor one.

No country in the world produces so much wheat per acre as the United Kingdom. The average French yield is 19.22 bushels, and it is probable that the German output is not higher, although Germany is said to grow 28 bushels per acre in places, just as France can provide isolated examples of 40 bushels and upwards to the acre. While, however, Great Britain has worked up its average yield per acre from 16 bushels to 32, France and Germany stand little better than they did a century ago, and other European countries make a still poorer show. For Austro-Hungary the average claimed is 17½ bushels, for Italy 12.75 bushels, for Spain 13 bushels, for Russia 10 bushels, for Poland 14 bushels, and for Roumania 16 bushels to the acre. Most of these yields, however, compare not unfavourably—adaptability and intelligence allowed for—with that of the United States, where the average per acre was estimated in 1889 on the basis of a ten years' return to be only 12.3 bushels, and for the past seven years it is returned at but 14.1 bushels. This comparison shows improvement, but it is very slow at the mean rate of a bushel in every ten years, a rate which, as the writer quoted says, would bring the American production per acre up to equality with the present English production by about the year 2077 A.D. In reciting figures of this kind one finds incidentally a powerful indeed, an unanswerable argument against any imposition of duties upon foreign corn at the ports of the United Kingdom. We have a natural protection of the most valuable kind in the high productive capacity of our soil, and if in spite of that it is impossible for the English farmer to compete against the foreign producer on a basis such as these figures reveal, the fault must be his own, or he must be handicapped by burdens of rent and taxation, which more than neutralise the natural advantages he possesses in the nearness of his market and the high fertility of the land he tills.

Where foreign crops are so light compared to our own, it is a natural consequence that a comparatively slight dip in the acreage yield of wheat will make all the difference between an abundant supply for our dependent home market and a deficient one. This year's United States wheat crop is estimated at 625,537,000 bushels, or a deficiency of merely 6 per cent. Last year, by the way, the average yield was 15.5 bushels per acre as against 15.2 bushels in 1898, both these

years standing well above any others recorded. Last year's crop was so fine, amounting as it did to 735,201,000 bushels, that it left 130,000,000 bushels available for export, after satisfying all home food requirements and allowing for 100,000,000 bushels kept back for seed. This year the amount available for export will only be 105,537,000 bushels on the same computation, viz., 420,000,000 bushels for home consumption and 100,000,000 bushels for seed. This is an estimated shortage in the exportable supply of barely 24,500,000 bushels, but it is unfortunately supplemented by short yields in other countries. Canada, for example, whose figures are not yet fully available for comparison, has next to nothing to offer us. As nearly as can be estimated, the crop is 34,201,000 bushels below that of last season, and it is mostly of poor quality. Last year's "bumper" crop gave the Dominion 40,000,000 bushels to export, and were all the current year's grain of last year's quality it would still give less than 6,000,000 bushels for export after satisfying home wants. In all probability barely half that amount will be available for foreign markets, and the writer of this interesting article is probably right in his conclusion that the North American crops of this season's growth will provide 7,333,000 quarters less for export than last year's did. That means a very serious deficiency, and unless it can be supplemented from other countries it will involve high prices for wheat all the world over throughout the present cereal year.

Little help can be expected from the Continent, for the crops there are also short in almost every instance, so much so that there is almost 20,000,000 quarters or 9 per cent. less wheat available than a year ago, whether for home consumption or export. The average production of the seven countries, France, Germany, Austro-Hungary, Italy, Spain, Russia, and Roumania, is estimated at 200,000,000 quarters per annum, and this year the estimate is only for 181,585,000 quarters as against 202,947,000 quarters last year and 212,235,000 quarters the year before. The present year's harvest, in fact, has only been surpassed in poorness by that of 1901 during the present century, and the quality of the crops this year is usually poor. Russia is said to have already sold 3,500,000 quarters of its present year's crop to foreign purchasers, but it is by no means impossible that the export of some of this grain will be prohibited if it be true that a population of about 40 per cent. of the area of Russia or of 21 Governments is now suffering from hunger. In any event Russia cannot make good the American deficiency, and neither can France or Germany. The only substantial hope of relief comes at present from South America, for in all probability India will not be in a condition this cereal year to send us any appreciable quantity of wheat. Drought has also again overtaken Australia, and is sure to diminish the capacity of the settlements there to send us any substantial weight of grain. But even were the highest estimates of the Argentine harvest to be fulfilled, the extra supply drawn from that quarter will not be great enough to make much impression upon current prices. Other cereals, too, are not likely to give much relief even to the poorer classes of the population, for although the crop of home-grown oats is put at a high figure, much of it, particularly in the North of England and the Scottish Highlands, has been lost, and in all probability we shall be short of this cereal likewise. The United States seems to have comparatively little if any of it to send; at any rate, none of its new crop appears to have come forward yet; and although Germany may spare 500,000 quarters, there is little or no hope of help from Roumania or Sweden. The general outlook therefore is for comparatively high prices in all cereals. Manitoba wheat of last year has been commanding 45s. to 48s. per quarter, but that is an exceptional price for grain of exceptional quality, and we do not anticipate that any such price will be reached for the new season's supply, nor can there be much old wheat left in Canada. If, however, an average of 35s. per quarter were reached and maintained, it would have a disastrous effect upon the well-being of millions of our population, as well as upon the manufacturing industries of the whole of Europe.

Economic and Financial Notes.

Natal and the Zulus.

It is hard to understand the indifference displayed by the British Government to what is going on in Natal. The story may be true that Lord Elgin endeavoured to prevent further encroachments upon the territory of the Zulus by intimating that if British troops were required to carry out the work of conquest, the Home Government would take a hand in the final settlement. That, however, is only newspaper gossip, and even were it true the mere fact that Natal declined help on these terms ought rather to have stimulated the Colonial Office to more active intervention than to have lulled it to rest. After all, the Home Government is responsible for the treatment of the coloured natives of South Africa, whatever may be the constitutional freedom granted to the whites who have settled there, and if Lord Elgin permits the small handful of these whites who control affairs in Natal to annex any portion of the territories of the Zulus, under pretext of making them pay for outrages, he will have grievously failed in his duty. The question is a much bigger one than the mere fate of this or the other tribe. It touches the whole relation between whites and blacks in that part of the British dominion. A sense of injustice already rankles in the minds of the black population of Natal, and, we fear, of other portions of South Africa under the British flag, which the present aggression is certain to intensify, with consequences that may be appalling one day to the whites. And even to the eyes of the most fervent Imperialist the pretexts put forward by the Pietermaritzburg Government for the present invasion of Zululand and for the arrest of Dinizulu look flimsy in the highest degree. It is probably enough true that outrages have been attempted, that some may even have been perpetrated, but all the crimes recited as having been committed or attempted by the Zulus do not justify such a military demonstration as has now taken place.

And even the most yellow of newspapers admit that the whole country is quiet. There has been no resistance offered. Dinuzulu himself has submitted quietly to the warrant for his arrest, and will stand his trial like an ordinary British subject. Why, then, all this outcry, this stream of accusations? They are meant to cover a land grab. It is the old story of New Zealand over again. As long as a British garrison was maintained in that far-away colony, the settlers were continually getting up pretexts for attacks upon the Maories, and war after war occurred, with results disastrous to the native landowners, to the aboriginal possessors of the country, thanks to the help given by the British garrison. Not a single conflict has occurred in New Zealand since the British troops were withdrawn from the island. The Maories have been left in undisturbed possession of what remained of their territories, and they have even been raised to the dignity of citizens, with representatives in the New Zealand Parliament. That story surely points a moral which the present Government ought not to overlook. If South Africa is to be free from these continual grabs, this intriguing to deprive the natives of their territories for the benefit of the land speculator and mining promoter, or in order to assist bankrupt Governments in raising the wind so as to stave off open insolvency, then withdraw the British garrison, leave the white settlers to fight their own battles unaided, or to settle their quarrels with the blacks on the best terms obtainable. We should then be free not only from responsibility, but from the gravest risks; free likewise from participation in many heartless crimes.

THE CANADIAN BUDGET.

A demand for the "pruning-knife" is said to be the coming cry in the Dominion. This is not surprising since the estimates for the next fiscal year reach £23,847,418, a terrifying figure in view of the fact that this expenditure is over and above the outlays of the individual provinces. The increase, however, is only £550,472 on the current year, and most of it is due to augmented subsidies granted to the provinces and now in active operation. And already economy is to be exercised in one direction; the subsidy of £30,000 per annum hitherto paid to keep the Canadian-Australian line of steamers afloat in spite of adverse trade conditions is to be stopped. Some allege this to be the Canadian method of retaliation upon Australia for its fine and large new tariff of the cur-in-the-manger type, but that would surely be too paltry a counter-stroke for the great Dominion to deliver. May it not rather be a preliminary to, or preparation for, the grant of that larger subsidy which the boodlers hope to get for their "all-red-ruin" route, to be bestowed as Canadian bait when the British taxpayer has been fooled out of his half-million or so? Who shall say? We cannot be sure even that the opposition of the Canadian Pacific Railway to this most barefacedly dishonest of projects is dictated by pure regard for the welfare of the Canadian people. For is not the Canadian Pacific a Yankee enterprise now? And if it buys the Boston and Maine Line will it not be so much more Yankee as to view any Government-supported rivalry towards its own ocean liners with the utmost disfavour? Canada is all right, though, and only wants time and new British capital to be clear of crises and bothers about money in any shape. That, at least, is what Canadian bankers say, and Senator Cox has his insurance company to draw upon when his banks and trusts want help, and the Government of the Dominion has always the British investor to fall back upon, and the Canadian Pacific and Grand Trunk railroads can raise and consume capital—British capital—*ad lib.*, and Mr. J. M. Courtney, late Deputy Minister of Finance, "has no fear of the future." Well, we have, and doubt not history will repeat itself even in Canada. Why, next year the Dominion Government has £5,840,000 in loans maturing here, and will need all its wits and wiles to get them renewed.

MORE ABOUT THE RUSSIAN BUDGET.

Mr. Kokovtsoff, the Russian Finance Minister, has been expounding his budget to the new Duma, and stuck to it that everything was all right, barring the extraordinary expenditure, which will involve a deficit of £19,500,000. This, the *Slovo* points out, is exclusive of £15,000,000 of Treasury bills issued in 1904, and which ought to be paid next year, because they have not been paid off in the current year. Add this, and the deficit will be lifted to about £40,000,000. How the money is to be found even the Finance Minister does not seem to know, but he candidly admits that it would be unfair to impose the whole burden upon the taxpayer, and seeing that over nearly half the empire famine is more or less acute at the present hour, this opinion would appear to be well grounded. The Minister, indeed, admits that the £1,400,000 provided for famine relief is insufficient, but he seems less concerned about the increase of that grant than about the money needed to enlarge provisions for national defence, and we have no fear at all that the military necessities of the empire, if indulged in to the extent now visible, will, time given, ruin it. However, the Duma welcomed the budget with loud applause, or at any rate the majority of the servile body bearing this name did so, and only one peasant deputy ventured to utter any sort of protest. He urged at great length, the *Times* Petersburg correspondent tells us, the necessity of suppressing the drink evil, which, under the guise of the state brandy monopoly, "is sapping the very foundations of national welfare."

This is true enough, for out of a total estimated revenue of £231,900,000 for the coming year, no less than £69,000,000 is expected to come from what is called the brandy monopoly. A few years ago this monopoly yielded a little more than £50,000,000, but as it spreads and becomes more effective, the poisoning of the people naturally becomes alike more successful and productive. Taking in the nett profits upon this injurious monopoly, Mr. Kokovtsoff estimates the entire burden of indirect taxation upon the people at £97,200,000, or 42 per cent. of the whole income, and he proceeds triumphantly to point out that this proportion is a favourable one compared with that shown in England, France, and Germany, where the indirect taxation amounts to from 40 to 50 per cent. of the direct. We have no interest in following fancy figures of this description, being more concerned in wondering how the £232,000,000 anticipated as the ordinary revenue for next year is going to be raised in the present depressed state of the country, and principally from the ignorant and poverty-stricken peasantry. Can it be possible that the lands, forests, and mines of Russia will yield £42,800,000 next year as against only £17,300,000 from direct taxes and £49,000,000 from indirect taxes other than the drink tax? We take leave to doubt, and think the surplus of £4,700,000 budgeted for a quite fanciful total. But this is not the view of the Minister, who boasts that if due allowance were made for land redemption dues £3,500,000, deferred taxes £2,900,000, and the proceeds of the sale of warlike stores £1,000,000, which figure in the assets or gross receipts for 1906, he would have a surplus of nearly £12,000,000 instead of £4,700,000, comparing next year with the past one. He admitted, however, that the foreign and that portion of the Russian Press which declared the finances of the empire to be "completely disorganised" had some ground for their criticism. The position, he said, was difficult, but he consoled the Duma by recalling sundry incidents, such as the admitted expenditure of £250,000,000 on an unfortunate war, and he also dwelt upon the fact that Russia had been compelled to raise a foreign loan on humiliating conditions, passing on, however, immediately to dwell on the better times at hand, noting the rise in the price of Russian stocks upon the foreign markets, a rise about which he doubtless knows more than we do. All that is now necessary to re-establish Russian credit is that the Duma should pass the budget. No doubt it will.

THE FINANCE OF THE NETHERLANDS.

Deficits never look well, and if we looked only at the figures as they stand, it would be easy to come to the conclusion that Holland is, as a State, in a bad way. The Finance Minister has recently introduced his estimates for 1908, and they show a deficiency of £974,310, receipts being only £15,256,431 against disbursements put at £16,230,747. It is not nearly so bad as this, however, when we examine the details a little. Covering the whole period of 15 years ended with 1906, the nett deficiency has only been about £358,000. On the ordinary budgets of that time there was, in fact, an aggregate surplus of £4,371,000, but the extraordinary expenditure exceeded this surplus by the small amount named. Now, the extraordinary expenditure of the Netherlands is not pure waste as so much of ours is. Money is devoted to various public purposes, to the railways, to improving and extending the waterways, to occasionally making advances to the Dutch East Indies, and in various other directions utilised for the good of the community. So next year's budget is not going to land the Netherlands in financial distress of any kind, even supposing the estimates to be partially falsified by the setback given to the country through the American financial crisis. No country in Europe has been thus far so severely hit by that crisis as Holland, not even Germany, but the people are rich, and the elasticity of the country's [illegible] can only be temporarily checked by even this [illegible]. For the expired financial year the deficit on the ordinary budget is put at £305,000, and the total shortage, ordinary and extraordinary together, at £686,000, although expenditure has been increased

during the year by supplementary votes and also by deferred army estimates, for Holland necessarily has an army. These increases in expenditure, however, have been in great measure, if not entirely, balanced by the higher yield of the direct taxes and Excise duties by the larger sum given to the State as its share in the profits of the Netherlands Bank. Had it not been for the heavy losses incurred through the operations of the State Insurance Bank, caused by the high percentage of accidents that occurred in trades not hitherto classified as dangerous, the current year might have closed with an inappreciable deficit. As it is, there was no floating debt at the time when Lord Acton, Second Secretary to His Majesty's Legation at The Hague, compiled the interesting memoranda from which we quote. So good has the yield of both direct and indirct taxes been in the current year that it has been unnecessary to levy the additional 10 per cent. put upon property and trade taxes, and no loan has been required. Next year there may be necessity to borrow, but at the present time the finances of Holland must be regarded as in a fairly strong position, in spite of the fact that the Netherlands India nearly always requires assistance in one form or another. The total nett deficit of the Dutch East Indies at the present time amounts to over £4,084,000, covered by two loans granted by the Home Government, aggregating about £4,800,000, of which about £667,000 remains available. Holland's own debt is about £94,600,000, and not much progress is being made with its reduction, although £400,000 is included in this year's budget for sinking fund purposes. Still, progress has been made, for in 1844 the debt assumed by the reintegrated kingdom of Holland was £100,000,000, costing about £3,333,000 per annum, or £1 per head of the population, whereas now, thanks both to capital redemption and interest reductions, the charges are reduced to £2,631,000 per annum, or about 9s. 2d. per head of the present population. All things reckoned in, this constitutes a most satisfactory record.

Cargo Fleet Iron Co., Limited.

In its year ended September 30 last this company earned a profit of £93,140, which is £48,720 less than that of the previous year. Then, however, the company made £87,600 of its revenue from profit on sales of shares in the South Durham Steel and Iron Company, so that only £54,257 of the total profit came from the manufacturing account. This year again £31,722 of the profit has come from sales of shares in the same company, but the trading profit is none the less up to £61,418, so there is a sensible improvement, and the directors say that the works are doing better now, although specifications for shipbuilding material have fallen off considerably, and not many new ones are to be expected until more orders for ships are given out. There was an unexpected delay in completing the construction of the finishing mill, and a large proportion of the output of the steel furnaces in the past year had to be sold as semi-finished products, on which the profit was small. So perhaps this and other statements give ground for hope that next year may be better than this one. They would need to do so, because the position does not seem to us particularly strong. There is an increase of £11,146 in the charges for debt interest and interest paid to banks, and the debt of the company has been increased materially, through the proceeds of that part of the £500,000 of "A" debentures bearing 6 per cent. interest issued during the year not having been utilised to any extent to pay off the floating debt. The company still owes £207,226 to its bankers or only £33,410 less than at the date of the balance-sheet a year ago, and it also owes £173,171 to sundry creditors against £178,249 as shown in the previous accounts. The aggregate debenture debt, indeed, is now £793,483, and if we add in the other debts just mentioned we get a total indebtedness of about £1,173,000, although only £311,416 of the "A" debenture issue appears in the accounts. Other changes in the balance-sheet may or may not be encouraging, but it is pleasant to see another £20,000 written off for depreciation from the profits, bringing the total amount thus credited up to £50,000. None the less does the cost of freehold and leasehold works, mines, and quarries, fixed and loose plant, machinery, &c., show an increase of £46,000 on the previous year's figures. Business, however, must be larger, for debtors to the company owe it £88,175 more at £126,852 and the stock-in-trade is £26,421 larger at £205,335. The investment of the company in the shares of the South Durham Steel Company has been reduced in book value by £27,638, and is now valued at only £110,708. Cash has actually risen £382 to £1,118 or thereby. During the year £96,057 was spent on capital account. Naturally in the circumstances as recited no dividend can be paid upon the issued share capital of £1,000,000, but after meeting all debenture interest and paying directors and trustees £2,800, besides setting aside the above-mentioned £20,000 for depreciation, a balance of £27,825 is left to carry to the new year. This time last year a dividend of 5 per cent. was paid on the share capital, but there is no £50,000 available this year to devote to any such purpose. Altogether a rather depressing story.

A Scotch Bank Amalgamation.

We hope a strong bank will develop out of the proposed fusion of the old Town and County Bank of Aberdeen with the North of Scotland Bank, whose head office is also there. Of the two the Town and County is the older, having been established in 1825, or ten years before the North of Scotland, but it has been the smaller from the first, and although a carefully managed concern with an honourable record throughout, it never could be called a bank of conspicuous strength, even for its size. The North of Scotland Bank has had its ups and downs, but has done much to help in the development of that part of the kingdom, and the rivalry between the two has perhaps been good now and then for their customers, if not always so profitable as could be wished for the shareholders. Now, however, they are about to unite, and meetings are to be held to sanction such changes in its articles of association as will permit the North of Scotland Bank to buy up the Town and County. Profit should arise from this transaction both to shareholders and customers, because expensive competition will be put an end to. Duplication of branches, for instance, will gradually disappear, and the savings in these and other ways effected should lessen working expenses, increase dividends, and perhaps render the bank the more ready to give help on moderate terms to the humbler among its customers. Under the proposed amalgamation the £35 shares of the Town and County Bank, £7 paid, will get in exchange 1¾ shares of the £20 shares of the North of Scotland, £4 paid, and fractional parts of shares will be paid for in cash at the rate of £16 17s. 6d. per share with interest at 5 per cent. from January 31 next. Apparently, too, although the wording is a little obscure, those shareholders of the Town and County Bank who do not wish to take up the shares of the North of Scotland Bank in these proportions will be paid off outright at £16 17s. 6d. with interest at the same rate. There may be a temptation to make the exchange, because the liability on the North of Scotland Bank share is only £16 as against £28 per share on the Town and County, but the reduction in the liability is only apparent since 1¾ shares of the North of Scotland Bank involve an identical liability with the one share of the Town and County. In announcing the amalgamation the board of the North of Scotland Bank takes the opportunity to give a valuable testimonial to the way in which the Town and County Bank's business has been conducted, but at the same time it is intimated that the securities held by the Town and County have depreciated below the values at which they were entered in the previous balance-sheet, and such depreciation has doubtless been allowed for on both sides in arriving at the terms of settlement.

CHAMPION REEF POSITION AND OUTLOOK.

We suppose even the magnificent mines situate on the Kolar goldfield cannot be expected to maintain their richness for ever, and we fear it must now be definitely accepted that the glories of the Champion Reef are on the wane. No doubt the mine has several years of good and remunerative work left in it, but shareholders must be prepared for comparatively poor results, measured by the brilliant achievements recorded during recent years. The mine may be said to have reached its zenith in the years from 1903 to 1905, when the dividends were 160 or 165 per cent., and it must be confessed that the falling off during the last two years has been startlingly rapid. The dividends paid for the past 12 months to September 30 aggregated 40 per cent. only, compared with 90 per cent. in 1905-6 and 160 per cent. in the year before, and while the return still looks a good one, the shrinkage is more important in the case of a mine like the Champion Reef than with many another similarly placed. This is because the mines of the Kolar field come as near to the investment category as a mine ever can, and a fall in market value and dividends involves real loss, and may be hardship to many. But mining at the best is speculative and risky, and the rough must be taken with the smooth. Any day the prospects of this mine may distinctly change for the better, but, on the whole, we are inclined to think that its best days are over. A perusal of the superintendent's report shows clearly that the general improvement looked for has not yet taken place. In the early part of the year Garlands section gave better indications, but, unfortunately, these were not maintained. Good milling ore was however disclosed to the south of Ribblesdale's shafts for considerable lengths in the four deepest levels, while between Ribblesdale's and Carmichael's shafts and also to the north of Rowe's shaft some shoots of fair grade have been opened up. As the directors quite fairly point out, it is apparent that a less productive zone of ground is now being encountered in the mine, and it is the policy of the management to continue vigorous development, with a view to opening up the ground below as quickly as possible. The directors maintain strong hopes that these developments will lead to good results, and with that the shareholders must be content, likewise hoping for the best. Meanwhile, operations on the option blocks secured on the Dharwar districts are being vigorously pressed forward, and no stone is being left unturned in the effort to improve the company's prospects. One good point is that while the ore developed during the year was much less than the quantity crushed, the reserves have decreased only 1,786 tons, to 381,285, owing partly to the fact that the width of ore in stoping is found to be really greater than that disclosed by the drivages on which the estimate is based. Another reason is that a considerable proportion of the ore milled has been derived from pillars of lode in old workings and from ends of ground in higher levels previously considered as not available for extraction. In the higher levels also ore ground has been developed by drivages or side branches.

As to the actual operations of the year the quantity of ore crushed was 179,243 tons compared with 203,174 tons in the previous 12 months, and the yield was 104,324 ozs., a decline of 46,309 ozs., the average per ton crushed being 11 dwts. 15 grains as against 14 dwts. 20 grains. Tailings and slimes treated were 241,003 tons, or 33,860 tons more, but the return was almost exactly the same at 27,011 ozs., meaning a moderate drop to 2 dwts. 6 grains per ton. It seems that successful experiments have resulted in the treatment of a much larger quantity of slime produced by the mill, and it has also been proved that the old tailings of dump at the No. 2 works can be profitably re-treated. From the latter source no less than 5,100 ozs. bar gold were obtained. Total production of gold was 131,335 ozs., a drop of 46,306 ozs., the realisable value being £500,189, compared with £678,706. Working costs were £296,881, or £9,075 less, and while the expenses per ton of milling and cyaniding have again been reduced, the mining costs, calculated on the tonnage crushed, are higher notwithstanding economies in coal and timber. Balance of profit is £187,220, a heavy falling away of £160,389, and to it are added sum brought in £3,732, and dividend on Kolar Mines Power Station shares £1,134, making £192,086. Income-tax on profits is £20,779, and £10,359 is written off for depreciation; while in view of the heavy capital outlay on the year, amounting to £78,075, a sum of £55,000 is written off from profits. Three dividends of 4d. each, making 1s. per share, or 40 per cent., are then provided, comprising a 2s. 9d., or 90 per cent., in the preceding 12 months, and £1,947 is carried forward. The reasons given for the increase in the costs per ton are various, and in most cases the prospects of a reduction are remote. There might even be a further increase should the tonnage milled continue to decline; but electric power, which cost more last year, should in future be considerably cheaper. Capital expenditure, too, should henceforth be on a much reduced scale.

American Business Notes.

Two banks have failed in Pittsburg since we wrote last, and one in Kansas City, while a Trust company in San Francisco—the California Safe Deposit and Trust Company—which recently closed its doors, is now said to be hoplessly insolvent. Charges of fraud are made against the officials, and the Governor of the State alleges that of the nominal assets of £1,800,000 only about £400,000 remains available. Over £600,000 has been lent to the directors or to companies controlled by them, often on securities of little value and sometimes on no security at all. Other large sums have been lent to persons of no standing on worthless security, and £60,000 lodged with the Trust, pending litigation, has vanished. Most of the officials have been arrested, and the scandal is said to be the worst in the history of the State. One subordinate has killed himself. What the position of the Pittsburg banks may be has not yet been disclosed, but the oldest one, the Fort Pitt National, is said to owe £600,000 to depositors, and, of course, it has a surplus fund of £200,000 and a paid-up capital of like amount. The other failure is that of a Pittsburg Stock Exchange firm, Whitney, Stephenson and Co., calling itself bankers. In New York itself bank failures appear to be only postponed by systematic lying and concealment of facts, but indications of what is to be expected there may be found in the proposal that three of the Morse-Heinze-Thomas banks should coalesce into one new bank. Their names are the National of North America, the Mercantile National, and the Consolidated National, and, remembering their origin and past uses, they are probably all insolvent beyond remedy. But in the States rotten planks are often thought good enough to clamp together to make the semblance of strong pillars. The capital of the three banks together is £1,200,000, half of it in the Mercantile.

With failures and patchings to occupy the mind the interest of the New York Banks return is diminished. In all probability the decreases of £2,336,600 in loans, and £1,686,400 in deposits are connected with the credit feats involved in the subscriptions for Mr. Cortelyou's relief bonds, and the increase in specie is only £660,800 out of a total import of the metal for the week of £3,000,000. Most of the incoming gold, however, is ordered by banks in the interior, and New York is most likely powerless to retain much of it, for part of the reserves of interior banks are held there, and the owners of the money are compelled to draw it away in gold to try and save themselves from liquidation. This explains the persistence of the premium on the metal, which, after nearly disappearing, has revived again, and now and then touches 1½ per cent. Generally it hangs at 1 per cent., but Christmas shopping demands may send it up. And call money has gone very dear again, rising to 15 per cent. on Monday, 25 per cent. on Tuesday, 20 to 22 per cent. on Wednesday, and 12 per cent. yesterday.

Poor Mr. Cortelyou means right well, but his efforts to dose the Republic with more currency have not been

appreciated. He has been able to sell only half his Panama bond issue or £5,000,000, and the £20,000,000 of Treasury Certificates offered have met with a still worse reception, only one-eighth to one-sixth of the amount having been disposed of. But an injection of even £6,000,000 into the already excessive mass of depreciated paper money is bound to be most mischievous, and will do nothing to restore confidence in the banks. And nothing that the Treasury or the ingenuity of financiers can hit upon helps the banks towards a resumption of specie payments. With most of them that important step appears to be indefinitely postponed, and we look for many more disclosures of malfeasance in the course of the inevitable liquidation. Already it would seem the spirit of mockery has laid hold of the people in regard to the banks. This is what we should infer from some derisive bank cheques sent to us by an anonymous correspondent in Chicago. They are curious and suggestive, printed as they are in colour in imitation of these real—we can hardly say genuine — bank cheques, which can only be met by Clearing House certificates, if at all, and some of the mockeries have got into the Chicago newspapers so that they obviously give expression to a feeling widely prevalent. One of these cheques has this legend, "In God we trust, in banks we bust." Then follows the number and the title, "The Windy City (1907) Bankers' Dream Association." It is a cheque professing to be for $10 signed by "Faro Bill, President," and payable by the "Soakum and Slockum Bank." The $10 are in what is described as stage money, and in the corner is a "free pass, good at any depot to watch the trains pull out." Another of these mock cheques professes to be issued by the "National Cleaning House Association," and the wag who sent it has filled in the name of the King of England, to whom, or bearer, $1,000 of imaginary money is to be paid. "In God we trust, in banks we don't" is the legend, and the cheque is supposed to be payable at the "Last Rational Bank of Trust Me Not." The manager is "A Good Bluff," and the secretary "I Am Busted." Still another sample is a cheque of the "American Lemon House Association," which promises to pay Mr. Easy Mark 5 Lemons. "This piece of paper is good for nothing" we are candidly told in the corner, and the bank on which it is drawn is the "Universal Bunco Bank of America." Hinkey Dink is the president and R. G. Wallsh the cashier, and the cheque is frankly declared "Warranted to be nothing but common paper." The correspondent who sends these suggestive slips does not give his name, and we therefore dare not print the information with which he accompanies them; but perhaps he will now be encouraged to reveal himself.

How the trouble is to be surmounted we are wholly unable to define. Congressman Fowler, however, the chairman of the House of Representatives Committee on banking and currency, continues to show that he had got hold of the right end of the stick. The only proper bank reserve is gold, he says, and he considered the United States most unfortunate in having to carry over £69,000,000 of greenbacks and £120,000,000 in silver, and to maintain these notes on a parity with gold. When to this is added the bank note circulation, it is obvious that no sound banking system can ever be brought into existence within the American Union. A Government bank for the whole country would be rotten from the start, and Mr. Fowler is quite right in considering it not essential. He was also right in declaring that if the Government continues to inject into the arteries of trade "a Government fixed and bond secured currency by swopping securities, bond speculations, treasury monopolies and executive orders," the country will arrive at a commercial tragedy compared with which "the present crisis is only a pleasant summer outing." This is profoundly true and as refreshing as true, proving as it does that there are sane people in the United States, in spite of the madness now so visible on the surface of events.

Much interesting information is to be found in Mr. Cortelyou's report upon the United States Treasury which appeared the day after the President's Message, but for the present we are concerned only with that portion of it which relates to the country's monetary condition. The exhibit made is by no means unsatisfactory from some points of view. He tells us, for instance, that of the total money in the country, 41.90% is gold. In that proportion he doubtless includes gold certificates. In the past year ended June 30 he declares that the increase in gold was £25,136,468, as against an increase of only £2,715,000 in silver and £8,535,266 in National Bank notes, while in Treasury notes of 1890 there was a slight decrease of £280,000. Altogether the per head amount of circulating media in the country was £6 8s. 9d., or, as Mr. Roosevelt stated some weeks ago, $32·22 It is an excessive amount without doubt, and the most obvious inference to be drawn is that with such an increase in the amount of gold or gold certificates available, there could have been no real need for these bank notes secured upon miscellaneous bonds, many of which are unmarketable, especially the 2% bonds of the United States Government itself. The very fact, indeed, that so much of the paper money of the country is based upon a form of National Debt which bears only 2% interest marks its artificial and inelastic character. Bonds of that description are of no use at all except to the banks, and could not be utilised in any way to raise money, as it is called, either at home or abroad.

Of much interest also is Mr. Cortelyou's summary history of national banking. The first bank of the kind was started in 1863, and since then 8,853 of such corporations altogether have been chartered, and of these 6,582, with an authorised capital of £180,899,000, were in existence at August 31 last. Banks to the number of 1,822 have, during the period, been placed in voluntary liquidation, and 449 in charge of receivers. Mr. Cortelyou says that the number of failures represents approximately 5 per cent. of the total number of banks chartered, but the figures just given do not point to such small proportions. It appears, however, that creditors of insolvent banks have got back on an average nearly 80 per cent. of the amounts due to them, and this is by no means a bad return, although it implies the loss of all the share capital and reserves in addition, as, presumably, the Secretary to the Treasury does not include shareholders among the creditors.

He has a good deal to say about reserves and about remedies for the inelasticity of the currency, but it seems to us that the most valuable improvement of all would be an abolition of the Treasury's irregular position of reserve holder for the entire country. Its demands are at the bottom of the currency scarcity more than anything else, as is shown by Mr. Cortelyou's summary of what he did when the crisis broke out. "Within four days," he says, "£7,000,000 in cash were transferred from the Treasury to the banks, taking in exchange State, Railroad, and Municipal securities, of a kind acceptable under the laws of New York, Massachusetts, Connecticut, and New Jersey by the savings banks there. By Nov. 11 £42,592,000 of United States money had thus been transferred from the Treasury to the banks, besides £2,775,500 handed over by the disbursing officers, presumably in payment of the current charges of the Government, so that altogether, within the space of a fortnight or little more, £45,367,250 of hoarded Government balances, until then locked up in the Treasury, were made available for market use. Now, surely if there were any genuine stability in United States banking there ought to be no waste of floating capital such as this implies. It lies at the root of the frequent scarcities of currency. What is to hinder the Treasury from keeping its balances always distributed amongst responsible banks throughout the Republic? It takes security at all times, and ought to be able to guard the nation against loss in a manner to all appearance more efficacious than any available for our Government here. Another point noticeable is that all this money did not relieve the currency crisis to any appreciable extent, at any rate not at first, because it was bank notes that the people distrusted, not greenbacks, or even silver certificates. In other words, the note circulation of these swarms of banks, many of them of a most trivial con-

struction, is a redundancy, and could be done without. Were the balances of the United States Treasury to be kept to a large extent in the hands of the banks not only might this note circulation be dispensed with altogether, but a degree of respectability and strength given to the selected banks most of them now appear to lack. Especially would this be the result if a genuine metallic currency were also put into circulation, that being the only currency which can be trusted at all times to increase and diminish exactly in accordance with the wants of the people.

Notwithstanding the currency refresher provided by the Treasury the banks, as we have said, cannot yet resume specie payments in cash of any sort. Some make a shift to do so, the majority cannot even do that, but the stronger ones are still importing gold. Among other portents of the week we may note that all mines of the Rockefeller copper combine—the Amalgamated—are to be closed, except the Boston and Montana, in the hope of propping the price of copper doubtless, or because the Amalgamated Company has not sold its stock. The Carnegie steel combine, otherwise the United States Steel Corporation, is now working only 38 out of its 96 furnaces, keeping prices up, of course, and has decided to knock 10 per cent. off the wages of its "rollers" on January 1. Receivers have been appointed for the Electric Vehicle Company, whose share capital is £4,000,000, all because of the stringency in money. Dear money is also no doubt at the root of the slump in the Yankee demand for diamonds. Quite an alarming reduction has taken place since July, when the value of the flashing stones imported was £537,000. Last month it was only £118,600, and the De Beers Diamond Buying Syndicate must be hard put to it to maintain its prices. Perhaps it will copy Standard Oil and Steel Trust tactics, and close down the mines to reduce output. Europe, and especially London, continues on balance to give the Yankees back their securities on every rise, and sometimes on a fall. Both the New York Central and Pennsylvania Railroad Companies are said to be desirous of making fresh issues of capital, and early this week the Pennsylvania was credited with the intention to put out £10,000,000 in new stock. Neither denial nor confirmation of this and other reports has been forthcoming, but there can be no question that both these railroads are in extreme need of money. What is doubtful is their power to lay hold of it. A curious illustration of the prevailing folly is furnished by the Western Union Telegraph Company, which instead of paying what is described as its usual quarterly dividend of 1¼ per cent. in cash had decided to distribute it in stock out of a balance of $2,630,000 of unissued stock in its possession. Of course the company has a book surplus still, although that had fallen by $2,036,000 in the September quarter to $14,827,000.

The other day the board of the Chicago Great Western Railway, or Mr. Stickney, announced the payment of interest upon the company's debentures, but apparently it is now unable to carry this out, for the Stock Exchange has been notified that the date for closing the transfer books has been withdrawn. A prominent member of the Standard Oil party is credited with being a heavy seller of securities on the Wall Street market, and stock is also being poured out in consequence of the Pittsburg failure. The Canadian Pacific Railroad is reported to have made the New York, New Haven and Hartford Railroad an offer for the Boston and Maine Railroad stock acquired by it during Mr. Mellen's consolidation campaign. If accepted this deal will definitely bring the Canadian Pacific into rivalry with the Grand Trunk in New England. The Atlantic Coast Line is to pay its common stock dividend in certificates.

Those who have nothing at stake in Yankee securities may find considerable amusement in watching the contortions of the Wall Street market. One day it is "just on the eve" of a great rally; a combination of "powerful interests"—most awfully powerful in paper has been formed to sustain prices and relieve distress; the next Rockefeller is accused of unloading on Morgan, and the day after the squirmings point to chaos come again. The whole display resembles nothing so much as the contortions of a nest of vipers in a pit intent on devouring each other. Happily the too long deluded public is leaving the market alone, and therefore the "strong buying" so often reported is the buying of professional bulls or the closing of accounts by equally professional bears, and when each "deal" has been carried through, so many gamesters are richer in Clearing House certificates, so many poorer, for the day. One big firm said to have been helped by the Standard Oil people when the crisis began has this week been driven to the wall through the knock out sale of masses of Northern Pacific and Great Northern Preferred stocks held by it. Those dealers who stood in to help the Union Pacific swarm were also being sacrificed early in the week. No human being is so perfectly heartless as the habitual stock gambler! On Thursday a taunting joy was expressed on Wall Street over President Roosevelt's latest and most emphatic repudiation of a third term candidature. He has already served nearly two terms he points out and wants no more of the job. Probably he has found the determination to make him the scapegoat an insurmountable obstacle. His name would no longer bring forth the needful campaign funds, so he stands aside, and, the market at first put prices up on the news, only, however, to find inconvenient lumps of paper flung out. It is a holding up market and cannot stand pressure, being hollow, hollow all within.

The National Farmers' Association has held a meeting in New Orleans and resolved to hold cotton for 15 cents per lb. as a fair price for this season's crop. Those who held the contrary opinion were denounced, and the meeting finally pledged members to hold the 6,000,000 bales said to be now in warehouses in the South until that price is obtained. Financial institutions that attempt to foreclose on the farmers are to have their names held up to infamy, and will be boycotted by the president of the Union under instructions. In Texas warehouse certificates are to be issued based on warehouse receipts—to the farmers presumably—at the rate of $30 for each bale of cotton held aud the Texas Banking and Investment Company of Houston is to act as trustee and guarantee the issue. The certificates are to be issued in $1, $5 and $10 amounts, and will be due seven to eight months after date. Merchants are expected to accept this newest, and yet old enough, kind of paper money at face value. All these events took place about a fortnight ago, and on Tuesday of this week the cash price of cotton dropped to 11·85 cents. Next day it rallied a little on the active European demand to 11·95 cents, but for all that a commodity supported by such tactics must ere long be to be had for the picking up. Yesterday the cash price was pushed further up to 12·20 cents. Thus far the receipts at ports have been only 3,996,000 bales, against 5,050,000 bales to the same date last year.

An estimate of the harvest in the Canadian North-West has been drawn up and issued by the Grain Dealers' Association of that part of Canada. According to this the yield of wheat per acre has been 12·9 bushels, and that would give a total crop of 64,675,000 bushels, but 45 per cent. of the grades of this and other cereals is Number 4 or lower. This means that there is little or no grain in Western Canada available for export out of the current year's crops. The yield of oats is said to be high at 34·3 bushels per acre, the crop amounting to 81,305,000 bushels in all, and the yield of barley is estimated to be 16,795,000 bushels, while 1,071,500 "bushels" of flax appears as an item in the *Times* telegram. We cannot interpret that by any known formula. But it is well that the Dominion Government should so far pay respect to facts as to warn off immigrants for this winter.

Passing Events.

Italy appears to be the most flourishing country in Europe at the present time, at any rate Signor Carcano, the Minister of Finance, has published a most pleasant looking budget. The gross surplus for the year closed at the end of June was over £4,000,000, and the net

£3,500,000. This result, the *Times* Rome correspondent briefly explains, is produced by a saving of £1,000,000 in the estimated expenditure, and an expansion of nearly £3,000 in the revenue. All sources of income contributed to this increase, and one would have thought that when such elasticity was shown some relief in taxation might have been accorded, but the Minister says "no," and although he budgets for a surplus of £2,000,000 in the current fiscal year and for one of about £2,750,000 in the next one ending June 30, 1909, he makes no promise that any diminution in the still excessive and impoverishing mass of taxes levied upon the common people and on most articles of consumption will take place. That is surely bad statesmanship, and the boast Signor Carcano seems to have made that the country was so well buttressed, and the Treasury above all so amply protected by its series of surpluses as to be quite unaffected by recent financial disturbances abroad, will, we fear, be falsified before long. Italy cannot possibly escape from the consequences of the general setback now being given to business and the capacity to make profits the world over. It might have outridden the storm little the worse had the taxation load been lightened, but as it is Italy will be drawn into the whirlpool with its neighbours, the more's the pity, for the country has unquestionably made marvellous strides towards a higher plane in civilisation and greater prosperity than it ever had before.

News from India is a trifle better, although 6,000 people are now on the test works in five districts of the United Provinces and 1,200 in two of the Central India States. Works will also be opened shortly in part of Bombay and the Central Provinces, while prices continue high, with a tendency in places to rise. Apart altogether from the poor harvest, the currency deception alone will force prices up and keep them up. Good rain, however, has fallen in Southern India, moderate rain in the Central Provinces, Central India, and Hyderabad, benefiting the spring crops. There has also been a little rain in Bengal, Assam, the Punjab, and Bombay; but this has effected little improvement in the prospects for the spring crops throughout Central India, and more rain is wanted in all the afflicted area.

A correspondent has been taking up the cudgels for Chili in the *Pall Mall Gazette*, and his letter is much to the point. Of the various influences which have adversely effected this republic of late, four are classed by him as being beyond its control, viz., the earthquake with its consequences, the fall in the price of copper, and the decline in the demand for nitrate, together with the universal gold stringency. Beyond, these, however, the Chilians themselves have been guilty of one serious mistake in adding $30,000,000 to the paper currency. This probably has had more influence in depressing the exchange than all the other adverse circumstances put together. For all that there is hope for the country, and "Philo-Chilian" does well to remind us of the enormous possibilities of the country—with its nitrates, its lumber forests and sheep farms, its marvellously fertile central area and its minerals. Given honesty and prudence in dealing with the crisis, Chili will surmount her present troubles and again attain to her former prosperity. Every encouragement should therefore be given to the Government and people to persevere.

The crisis threatened in the German motor-car industry is so serious as to have induced the Ministry of the Interior or Imperial Office for Internal Affairs, to call together for a conference representatives of leading German automobile clubs and motor-car makers. What transpired at the conference has not been disclosed, but its object was to settle the form in which a series of questions should be drawn up. These are to be put to motor-car manufacturers and to purveyors and manufacturers of rubber, benzine, car frames, and raw material, with a view, we judge, to try and discover what has brought the industry to such an extremity. Mere onlookers may be able to draw inferences without all this elaborate official preparation. The industry is a new one—not ten years old—and it has been developed with a fury and regardlessness of consequences unexampled in the history of modern manufactures. No wonder, therefore, that a disastrous check should now be threatened to the activity of builders and all concerned in this industry. It has been visibly coming on for many months back, not merely in Germany, but in France, England, and the United States.

Another action brought against the insurance companies has been decided in favour of the plaintiffs—the burnt out—in Jamaica. The suit was brought before Mr. Justice Cargill, at Montego Bay, and after a thirteen days' hearing, the question submitted to the jury: "Have the plaintiffs proved to your satisfaction that the fire which originated in King Street started before the earthquake?" was answered by it in the affirmative. Judgment was accordingly entered for the plaintiffs, but a stay of execution was granted pending an appeal. We doubt the wisdom of carrying this litigation further, for the longer the churlishness of the insurance offices is kept before the public, the worse will it be for their reputation.

The business of the Hovis-Bread Flour Company has expanded during recent years to such an extent that the directors find difficulty in financing it with the present working capital at their disposal. Book debts and stocks have both risen considerably with the growth of the trade, and, in addition, the directors deem it necessary to provide additional plant at the various depots in order properly to carry out the work. More funds are therefore needed, and it is proposed to increase the capital to £300,000 by the creation of 75,000 £1 shares, of which 50,000 will be issued, half in ordinary shares at a premium of 5s. per share and half in 6 per cent. preference shares at par.

Business in the textile trade presented no outstanding incidents during the six months ended September 30, and under the circumstances the interim report of the Bleachers' Association is perhaps as good as could have been expected. Nett profits, after providing for debenture interest and other charges, including £79,875 for maintenance and upkeep and £7,100 for depreciation of leaseholds, &c., amounted to £151,137, representing a recovery of nearly £4,500. Preference dividend having been paid, the usual £25,000 is transferred to the depreciation fund, but the balance brought in was £5,600 less at £7,279, so that the sum carried forward to be dealt with at the end of the financial year is £1,200 smaller at £70,689.

Another effort was made by the directors of the Russian Petroleum and Liquid Fuel Company to get the preference shareholders to advance £52,000 of their special reserve, and so save the company going into the hands of a receiver. The chairman made what seems a fair enough offer when he undertook to send out an independent oil expert to Baku, and to give every opportunity for discussing the question of management when that gentleman's report had been received. That proposal, however, did not meet with the approval of the little band of agitators who persisted in refusing to help the board unless they were appointed as an advisory committee on the spot. Mr. Levy Lever, M.P., would have given way, and, in fact, had come prepared to suggest a compromise, but something ruffled his temper, and he announced that he really could not think of doing anything of the kind now. Another prominent leader, Mr. Burke, objected to being called a "wrecker," and promptly proved the correctness of that description by stating that he would rather see the property in the hands of a receiver than under the control of the present board. Both of these gentlemen profess to believe that a receiver is a sort of philanthropist, who would nurse the property until it had paid off all the debenture-holders' claims, and then hand it back to the shareholders free of all encumbrances. Where they got that idea we do not know, but a much more likely proceeding would be that the receiver would endeavour to dispose of the property for sufficient to cover his requirements without regard to the shareholders' interests. This time, however, the "wreckers" have shown their hands too plainly. The poll on Wednesday gave the victory to the directors, only 91,481 votes being recorded against

the resolution compared with 278,219 in favour of it, and the resolution has, therefore, been carried by the necessary majority. It is to be hoped that the agitation will now subside, and that the directors will be given a fair chance to try and put the company on its legs again.

The Week in Mines.

Mining markets opened in a very subdued fashion, and instead of the Kaffir Circus leaders giving the bears a further twisting prior to the make-up they proceeded to take any profits there might be about, so that the appreciation in prices on the account merely made the shorts smile instead of scaring them out of their lives, as at one time had been fondly hoped. The making-up was fairly satisfactory to the bulls as things go, but there were quite sufficient backward movements to keep up the spirits of the bears, and we are beginning to fear that that 7 per cent. Christmas boom is not going to come off after all. Selling in connection with a failure at Bremen was partly responsible for the opening set-back, and there was a disposition to lower prices in anticipation of possible French sales in consequence of the proposal to put a new tax on speculative dealings. Paris, however, was not much disturbed by the fresh restriction, and if anything was a small buyer, so that the reaction must be mainly ascribed to profit-taking.

Carry-over rates were much the same as on the previous occasion, and therefore pretty stiff. The general South African charge was 7½-8½ per cent., but Rand Mines, Gold Fields, "Johnnies," T.C.L., Jagers, New Vaals, and Premiers could be borrowed on at 6½-7½ per cent. Randfonteins cost 7-8 per cent. to carry over, and East Rands and De Beers 6-7 per cent. The Rhodesian general rate was slightly higher than Kaffirs at 8-9 per cent., Tanks being done at 6-7 per cent., Zambesia at ½ per cent. more, and Chartered at ½-1d. West Africans were taken in at 7-9 per cent, Siberians at 8-9 per cent., Westralians at 6½-7½ per cent., and Australian copper shares at 6-8 per cent. There was evidently a bear position in Rio Tintos, the charge being only 3-5 per cent., but Anacondas cost 5-7 per cent. to continue. Broken Hills were likewise scarce, a good deal of short selling having taken place, the rate being 4-6 per cent., with only 1 per cent. on Proprietary shares. The American things were done at 7-9 per cent. Making-up prices were irregular, the largest rise being one of 2 in a thing known as African Concessions. Central Mining had put on ¾ in the fortnight, Robinsons $\frac{9}{16}$, H. F., Modders, Rose Deep, and Rand Mines $\frac{5}{16}$, and East Rands, Crown Deep, Ferreira, and T. C. L. ¼. Many more were $\frac{3}{16}$ or less higher, but Welgedachts were $\frac{1}{16}$ to the bad, Casons fell $\frac{3}{16}$, De Beers ⅜, Premiers and S. Rands ¼, and City and Suburban and Jagers $\frac{3}{16}$. Broomassies were 3s. to the good among West Africans, while Taquahs showed a fall of 5-32. In the West Australian division Ivanhoe were up 9-32, Northern Blocks 7-32, and Associated 5-32, but the Broken Hill display was distressing. Block 10 and North full ⅝, Junction Norths ½, South Blocks 9s., Proprietary $\frac{5}{16}$, and Block 14 7-32. Coppers went both ways, but while Anacondas were down $\frac{1}{16}$, Capes ½, Tintos, Great Cobars, Mount Elliotts, and Namaquas ¼ and Foldals $\frac{3}{16}$, Lakes jumped $\frac{1}{16}$ and Spasskys $\frac{7}{16}$. The principal loss in Tin shares was a drop of ¼ in South Croftys. Alaska Mexican shares advanced ⅜ and United $\frac{3}{16}$, but Camp Birds showed a fall of 2s. 3d. A recovery of ¼ took place in Mysores, while Dharwars were $\frac{7}{16}$ lower, and Waihis and Grand Junctions fell 5-32 and 7-32 respectively. So much for the account.

After the contango business was at an end the market resumed its downward tendency, and a slight activity in business was entirely the product of selling orders. Local realisations were not extensive, but the troubles in Germany led to a certain amount of liquidation. Paris was also bearish, and the failure of a well-known, highly-respected, and reputedly wealthy firm of jobbers came as a surprise, and gave all markets a nasty turn. There was nothing open in Kaffirs, and the difficulties appear to have arisen mainly from the slump in Siberians. Communication between London and the Continent was bad, thanks to the gale. Later in the week business sunk to the smallest possible dimensions, the approaching Christmas holidays being a good excuse for reducing commitments, and the excellent output and labour returns for November did nothing to galvanise the market into activity. A good many Kaffir dividends were announced. The Rose Deep pays 10 per cent., the same as last time; the Crown Deep 60 per cent. compared with 40 per cent.; the Geldenhuis Deep only 17½ per cent., or 2½ per cent. less; the Ferreira 150 per cent., or the same as before; and the Van Ryn an increase of 5 per cent., at 15 per cent. The New Modder repeats its interim of 5 per cent. and the French Rand goes up from 5 per cent. to 7½ per cent., but the Geldenhuis Estate pays 5 per cent. less at 35 per cent. Further cable news has come to hand from the City and Suburban to the effect that if developments do not improve it will be necessary before long to mine ore of lower value than that at present being sent to the mill. Development and sinking of the incline shafts will continue as quickly as possible, and reference is made to the large part of the mine remaining totally unexplored, but shareholders must not look for too much on that account. However, it is hoped that developed portions of the mine when opened out by stoping will be proved to contain ore of higher value than indicated by results so far obtained by driving.

There was no special feature among Land and Finance shares apart from the weakness of Welgedachts, but Diamond shares were heavily sold, and the outlook for the industry is most dismal. Paris threw over a good many shares, and it is said that the dividend, already a good deal overdue, may be less than 10s. a share. The import of diamonds into America during the last few months shows a terrific slump, and it is no wonder that 4,000 Amsterdam diamond cutters are out of work. The industry is passing through the most acute crisis it has encountered for years. De Beers collapsed to 16, and the Premier to 7⅞, but there was a slight rally from the worst figures. Jagers and New Vaals also fell away, and the native riot at the Voorspoed Mine caused the shares to be called ½-1, but they got a little closer later on. Rhodesians were humpish after a fair start, and all the leading things fell away, more particularly Tanganyikas and Zambesias.

In the West African group good development news helped Broomassies, and Ashanti Goldfields and Abossos were on the up grade, but the tendency later on was easier all round, Taquahs being particularly flat. Broken Hills continue to perform very badly and show further considerable losses thanks to the persistent weakness of the various metals. Colonial operations were not an important influence, but the Australian cables were never very encouraging, and bears made full use of their opportunities. It may be that the slump is being overdone, and carry-over rates showed clearly that a large amount of short selling has taken place. On this disclosure prices rallied for a time, but were soon going the wrong way again. West Australians have been almost lifeless, and present little of interest. Oroyas hardened to over par again, but good development news did nothing to help Great Fingalls, and the Kalgurli meeting did not act as a stimulant. A few shares showed trifling losses, and Perseverance were very dull on the mine manager's statement that the ore reserve estimates at the end of the year will show a considerable falling off.

The Copper share market was as bad as any, and a report that the Anaconda mine would be shut down was followed by a statement that all the Amalgamated mines, with the exception of those in Boston and Montana, would cease work. Anaconda went back with a rush, everything else going the same way, and continued weakness of the metal stood in the way of any recovery. The best of Anacondas was 6¼, and of Tintos 67½, and it was not long before 5⅞ and 65¾ respectively was reached. There was no relief to the all-round fall, and the entire list closes lower. Tin slumped heavily, and a general set-back in share prices

resulted. Thanks to a shortage disclosed at the carry-over, Pahangs were dashed up to 34s. 6d. on Wednesday, but they soon came back and finished easy with the rest.

Siberian shares were a poor market among miscellaneous things and some may have come out in connection with the failure already mentioned. Camp Birds continue to dwindle and Le Roi shares fell back. Tomboys eased to 30s., but Alaska Treadwells and Mexicans showed improvement. Indians were good, take them altogether, and it is encouraging to see Mysores at 5 again. New Zealands were better, and the report that Grand Junctions might reconstruct was promptly denied. The company is earning profits, has ample cash, and £18,000 in calls still to come in.

MINING NEWS.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* ONE SHILLING *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* INVESTORS' REVIEW.

EAST RAND MINING ESTATES.—This company's business remained in a condition of suspended animation during the year ended June 30, the directors thinking it inadvisable to commit themselves to the heavy capital outlay involved in the sinking of shafts and the development and equipment of the mines until the financial outlook has considerably improved. Boreholes put down on the farms Grootvlei and Palmietkuil have proved the existence of the main reef over the whole of this area, the extent of the two properties being 16,673 acres, equal to 11,343 claims. In the event of the Government deciding, as anticipated, to grant the owners one-quarter of their ground for mining purposes, the freeholders would have a proved mining area on these two properties alone equivalent to 2,836 claims, and the company would also retain its surface and other rights to claim licences, &c., in respect of its freehold interest in the two farms. Last August the directors entered into negotiations with the East Rand Extension Gold Mining Company for the purchase of its interests on the farm Leeuwpoort, the terms being 150,000 East Rand Mining Estates shares, £45,500 cash, and the assumption of a liability of £87,825 in respect of outstanding debentures. But in view of the general financial disturbance, and the fact that £150,000 would have been required to properly equip the mine on the newly-acquired farms, the directors did not feel justified in proceeding with the agreement. At the same time, a favourable view of the business is still taken, and later on negotiations will doubtless be resumed. Balance to the debt of profit and loss account is £8,997, including £150 added on account of the past year.

WEST RAND CONSOLIDATED MINES.—In order to show the position of affairs after the completion of the amalgamation sanctioned in April last, by which the properties and assets of the Violet Consolidated and the West Rand Mines were acquired, this company submits a balance-sheet made up to May 31 last. It is an imposing-looking affair, showing property account £1,505,510, permanent works, mine development, machinery, plant and buildings £385,734, and cash £355,519. Issued capital is £2,004,424 in £1,979,424 ordinary and £25,000 deferred shares of £1 each, and there is a share premium account of £250,000. By December 1 the cash balance had been reduced to £275,407, expenditure having been £84,593 against interest received of £4,480. Additional machinery ordered will cost about £50,000, and a further £144,000 must be expended to bring the mine to the producing stage. Considerable development work has taken place along the outcrop of the main reef, and estimated ore reserves are put at 300,000 mining tons, all payable, while by the end of May, 1908, a further 125,000 tons will have been opened up. In these estimates all blocks of ore under 5 dwts. have been omitted. The new mill, when completed, will comprise 80 stamps and three tube mills, with a crushing capacity of 18,000 tons per month. Cyanide and slimes plant and all other necessary equipment are also being erected. Later on the plant will in all probability be considerably enlarged. It is expected that crushing will commence during the month of July, 1908, and while at first the costs will hardly be below 20s. per ton, the figure should be reduced to 17s. 6d. when the contemplated 200 stamps are in operation.

DAGGAFONTEIN GOLD MINING.—According to the report for the year ended June 30 the sinking of the additional borehole (No. 7) referred to in the previous year's statement has been proceeded with, the depth reached on November 9 being 2,836 ft. 2 in., and the formation consistent with that found in boreholes Nos. 1 and 6. The engineer's report refers to the unusually high values of the Kimberley reef as located in the various boreholes, including No. 7, and states that should boring continue steadily the reef horizon might be reached during the present month. Revenue during the period under review was £1,847, and the outgo £3,069, leaving a deficiency of £1,222 to be added to that already existing, increasing it to £9,665. Boring expenditure to date is £46,728, and the company still has ample resources, although Consols in which they are placed show serious depreciation. The Daggafontein Prospecting Company, which holds an important interest in the Gold Mining Company, also issues its report, and refers to the work done on the property. Income in the twelve months was £542, and the expenditure £962, the difference being added to the deficit of £665 brought forward, making £1,083 in all. Cash and loans on security amount to £11,014, and shares at cost to £92,900. Authorised and issued capital is £60,000, and £45,000 has been received on account of premiums.

GIANT MINES OF RHODESIA.—Yet another Rhodesian mining company earning fair profits. For the year to the end of June the reduction plant treated 53,897 tons of ore yielding from all sources 25,182 ozs., the value of which was £106,899. Working costs were only 17s. 11d. per ton and the profit £58,599 or £1 1s. 9d. per ton. Transfer fees gave a trifle, and after writing off £9,796 for depreciation, expenditure for the year on shafts, machinery, buildings, &c., £6,830, general expenses £1,601, and interest £233, the balance of profit is £40,181, a good figure. Add £7,075 brought in, and the sum for disposal is £47,256, from which the directors have already paid a dividend of 1s. 6d. per share or 7½ per cent. Income-tax is £2,070 and £27,365 was left to carry into the current account, so that on August 15 last a further distribution, being dividend No. 3 of 7½ per cent., was made. At the date of the balance-sheet the ore in sight was 189,318 tons, valued at 11.4 dwts. per ton or over three years' supply for the present plant, and since then the discovery of what is probably a new ore body has added another year. Instructions have been given for the prospecting work on the Giant South claims mentioned in the last annual report to be proceeded with. The cost will be spread over a considerable period, so as not to interfere with the present rate of dividend.

ENTERPRISE GOLD MINING AND ESTATES.—This company got hold of a revenue of £13,209 in the year to June 30 mainly from the share holding in the Giant Mines of Rhodesia, and spent £3,431, of which £1,200 was for directors' fees. Balance of profit comes to £9,778, making with £10,800 brought in a total of £20,639. Debt at revenue and expenditure account brought in reduces this sum to £15,880, and a dividend of 1s. per share declared July 12, 1906, took £9,749, leaving £6,130 to be carried forward. The company's claims show a nett increase of 10 on the year, and it is instructive to note that the interest acquired in 210 claims on the extension of the Rhodesian Basket Company's property has been abandoned. Stands and land holding remain as before—namely, six stands in Salisbury, and freehold farms of an aggregate acreage of 167,248, all titles being complete and in order. During the last year development work has been concentrated on the New Found Out property, the preliminary results obtained being so encouraging that, on the advice of the consulting engineer, the board decided to sink the main shaft to a depth of 250 ft. and to drive a length of 900 ft. at that level. This work is now proceeding with satisfactory results, the main shaft already reaching a depth of 180 ft. The most wonderful thing about the company is that the shares held in subsidiary and other ventures standing in the books at £67,773 had a market value of £96,143 at the date of the balance-sheet.

WITBANK COLLIERY.—Output of this Transvaal colliery for the year ended August 31 was 341,322 tons, an increase of 7,439 tons over that of the preceding twelve months. The greater portion of the output was disposed of to the mining companies of the Rand, and the Victoria Falls Power Scheme is not likely to put an end to the demand just yet. Profit on operations was £20,314, sundry revenue gave £2,300, and £35,685 was brought in, giving an available sum of £58,305. Of this £15,647 is set aside for capital expenditure in excess of the sum provided, and after paying the proposed dividend of 10 per cent. there remains £18,222 to be carried forward. Development has been kept well ahead of the requirements, and the general manager observes that there are a large number of working places kept in reserve.

NEW GOLD COAST AGENCY AND CINNAMON BIPPO.—Lord Harris, chairman; secretaries, the Consolidated Gold Fields of South Africa; London office, 8, Old Jewry. Those facts speak volumes, and we can afford to be brief regarding other incidents in the company's history. Its issued capital is only £549,997 and the assets, certainly worth setting out, consist of 55,623 fully paid shares in the Cinnamon Bippo (this is a mine, by the way, not a spice company); 56,551 fully paid shares in the Wassau (Gold Coast) Mining Company (the company which earned notoriety if not fame by accidentally paying a dividend of 1s. per share); 40,000 fully paid shares in the Fanti Mines; options up to December 31, 1910, over the Wassau Cinnamon Bippo Concession, amounting to about 1,760 claims and options up to July 13, 1908, over Hunt's Abosso, and a portion of Horton's Abosso Concessions, amounting approximately to 100 claims. Now it really would be useful if the auditors, Messrs. Fuller, Wise, Kirby, and Fisher would put us on the track of the real value of these assets. They are all lumped together in the balance-sheet at £482,170, but prices of the share holdings are a mere shadow of their par value, and it would be nice to know at what figure they are entered. Some highly valuable details of West African gold production during the last three years are given in the report, and if this could be supplemented by, say, the total amount of money sunk in West African mining, the market value of the same now, and the percentage of dividends on capital we should really be getting on. Wonderful to relate, the income for the past twelve months was in excess of the outgo, and the balance of expenditure account is only £48,707. The cash balance is small, but £41,107 has been lent on loan. As to Cinnamon Bippo his lordship and the other directors actually condescended to discuss with the principal shareholders the question of resuming exploratory work with a view to subsequently raising funds to bring the mine to the producing stage, but it was thought wiser to post-

pone any decision on the point for the present, money being horribly scarce for West African "mines."

ASHANTI GOLDFIELDS CORPORATION. We think it will not be unfair to divide the directors' report of this renowned but disappointing venture into two parts, a good and a bad. The statement covers the period to June 30, and we can first point to an increase of nearly 5,000 tons at 48,610 tons in the quantity of ore treated, while the yield from all sources, including accumulated tailings, was 44,272 ozs. compared with 30,855 ozs. on the preceding 12 months. Profit on working was £104,078, an increase of £63,624, and after writing off £25,000 as depreciation on the shares in the Sansu mine, still leaving them above market worth, providing for ordinary depreciation, and for mines development redemption there is a balance over of £56,424. From it the directors pay two dividends of 10 per cent. each and carry forward £27,115 against only £1,691 brought in. Last year there was no dividend of any sort, no less than £60,000 being applied against the Sansu shares. Expenditure in West Africa on revenue account shows a reduction of £8,817, notwithstanding an increase of 4,876 tons milled, the outlay working out at 26s. 2d. per ton as against 33s. 1d. So much for what is good or moderately so, but much that we must proceed to point is not so satisfactory. It appears that owing to the low values in the deeper levels of the Ashanti mine the Ashanti ore reserves are in point of grade far short of the standard on which the output of recent months has been based. So acting on the consulting engineer's recommendation, it has been decided to immediately reduce the output to £12,000 per month, and the directors can only express the hope that the improvements recently indicated in the mines generally, and particularly No. 6, the lowest level of Ashanti mine, will be maintained, and the period of curtailed revenue be brief. Present ore reserves amount to 50,800 tons, averaging 18.2 dwts., and in view of this figure the decision to reduce the output was obviously inevitable. Development work, however, has proceeded vigorously, and has mainly been confined to the chief producing mines, but a start was made with the re-opening of the Azeinm mine and the Korkortasivia vein has also been prepared for stoping. A good deal of capital was spent in the period now being reviewed, no less than £61,413, the principal item, coming under the head of plant, machinery, and buildings, being the first unit of the dry crushing and roasting plant. This commenced working in January last, and the expectations in regard to it have been fully realised, an average actual extraction of over 93 per cent. of fine gold having been obtained from the total gold assay contents of the ore treated. A second tract has been purchased, which it is expected will commence working early in the new year, and the surface equipment has been largely improved, and added to with a view to obtaining higher efficiency and greater economy. Possibly some of this might have been included among the good parts of the report, but we now come to a point, the objectionable nature of which cannot be contested. This is the appropriation of the share premium account to the elimination of, presumably, worthless assets. Twelve months ago the directors applied £65,117 against mine development, works and buildings, debenture issue expenses, and depreciation, while now £71,305 is set against the share holding in the Ashanti Goldfields Auxiliary, completely extinguishing it, and reducing the share premiums to the imposing figure of £29 16s. 1d. Do shareholders realise that something like £570,000 has been taken from these share premiums, capital in another form, and used to write down assets, whereas the entire sum should have come from profits? It is really heartbreaking to think that half a dozen years ago shares were placed at £24 premium, and that those shares could not to-day be sold at a couple of pounds each—that is, taking the capital as it existed before the split. The shares are now of 4s. each, and the market value about 7s. 6d. The necessity of writing off Auxiliary Company's shares is probably due to the proposed rearrangement of the company's capital. Its £1 ordinary shares will be subdivided into one ordinary and one deferred share of 10s. each, the ordinary first getting 10 per cent., then the deferred 10 per cent. and the balance being divided equally between the two classes. Under this scheme the Corporation will receive 143,060 ordinary and 176,250 deferred shares, and in order to assist the Auxiliary with some cash the present concern will hold these deferred shares in trust for the other undertaking, handing over the cash whenever any are sold. Another idea of the directors for helping the company along is to change its name to the Ashanti Rivers and Concessions, Limited.

NEW QUEEN GOLD MINING COMPANY.—This company had a miserable experience during the year to August 31, and if operations are to go on reconstruction must ensue and the shareholders put up more of the ready. Crushing during this period was on a very limited scale, and the total revenue was only £9,789 against an expenditure of £16,005, the loss being £6,276. The outlay included all development and prospecting work, which partly accounts for the severe deficiency, but this does not alter the stubborn fact of its existence, nor that the company is at the end of its tether. If we deduct the trifling credit of £140 brought forward, a debt of £6,130 remains, and the cash balance is now down to £910, fortunately after providing the directors' fees. Need we say how much the board regrets that for some time past the reefs have been so small, and therefore expensive to work, and that the recent developments which have exhausted the cash resources have not yet disclosed sufficiently productive ore? But just note the assertion of the company's mine agents that "the mine has still great possibilities and judicious prospecting work may lead to further important discoveries." They are most anxious to point out that there are a score of distinct known reefs in the lease very few of which have been worked, and who can say that the bulk of the gold does not remain undiscovered? Who, indeed? So pay up your shilling a share and be as happy as you can. When the reconstruction has taken place, the capital will be a mere shadow of its former self, as the new concern is to be burdened with £24,000 only compared with the present nominal amount of £100,000, practically the whole of it in issue. The new shares will have a nominal value of 2s., one-half being credited as paid, meaning an assessment of 1s., and those who come in will have the right up to December 31, 1908, to call for one ordinary 2s. share for every two held.

NEW NIMROD COMPANY.—We need not occupy much space over this company's affairs. The report made up to September 30 imparts the information that a further portion of the shares possessed in the New Century Engine Company have been sold, without, however, telling us anything about the price or whether a loss or profit was made. The interest in the Athi Mining Company remains as before, and as to the unpronounceable Chuquitambo Gold Mines, the chairman has been to Peru and knocked things into rather better order. Differences, presumably with the original vendors, which have existed for the last three years are now at an end, the capital of the old Chuquitambo has been drastically reduced, a satisfactory arrangement has been come to in the matter of money spent by the Nimrod in protecting the property during a prolonged period of inactivity, and the administration of the mines at La Quinna for a period of two years from March, 1907, is to be undertaken by the original vendors, who are furnishing funds for carrying on the necessary work. Considerable development work has been carried out on the property since the date of this agreement. A good supply of ore has been extracted, and is now ready for crushing, the stamps being in good working order. Excess of general expenditure over income is £3,053 and something like £8,000 is possessed in investment cash and loan.

ST. JOHN DEL REY MINING.—During the first half of this company's financial year 80,959 tons of ore were raised and 76,899 tons crushed, the proportion of mineral rejected being 5 per cent. Average recovery was 42s. 2d. per ton crushed, and the bullion realised in London a sum of £162,324. Duties and charges were £8,585, working costs in Brazil £107,335, developments £6,455, and London general expenses £2,445, leaving a balance of profit of £37,515. Debenture interest and tax, preference dividend, a payment of 6d. per ordinary share, and balance of income-tax altogether account for £23,968, leaving £13,547 to be transferred to the bond redemption account, increasing it to £23,370. The company's operations were much more successful than in the corresponding period, more labour and ample power combined with an improvement in the mineral contents resulting in a monthly produce averaging £27,000 as compared with an average of £20,500. During the delay caused by the inadequate labour force the reserves of mineral have to some extent been drawn upon, but this will be compensated for when horizon 15 is opened out.

WHEAL VOR.—The directors of this undertaking have a disappointing story to tell in their first general report made up to June 30 last. Put as briefly as possible, the capacity of the pumping plant proved unequal to the strain thrown upon it, and although by much exertion the water was lowered to a depth of 23 fathoms below the adit, the motor pump at that point gave way, and the whole apparatus had to be removed. It has been at work again since, but even now the water has only been lowered to a depth of 25 fathoms, and it has been necessary to order a second pump, delivery of which will be made in February. Mining operations have been centred on the Wheal Vor property, and the adjoining Wheal Metal and Great Wheal Fortune sets, which have been acquired since the incorporation of the company, will probably be worked later on by subsidiary companies. Owing to the pump trouble there is not much fresh information available with regard to the ore which is "expected" to be found standing in the comparatively shallower levels. Everybody, however, seems to be pleasantly optimistic, and we should be glad to see the company pay, because it would give much encouragement to tin mining in Cornwall. The issued capital is only £31,200, of which £1,947 is in arrear, and development and general expenditure to date stands at a nett sum of £4,987. Property account is £14,190, buildings, machinery, plant, &c., are down for £9,713 and the cash balance is £4,117

NATIONAL PROVINCIAL BANK OF ENGLAND.—The statement for November 27 shows liabilities on notes or bills of £540,051, and on simple contracts of £53,888,426, against assets consisting of cash on hand and at Bank of England £8,226,674, money at call and short notice £2,844,319, British Government and other securities £14,644,217, and bills of exchange £34,063,267.

LLOYDS BANK.—The balance-sheet for November shows liabilities consisting of current and deposit accounts £64,948,964, and bills accepted or endorsed £3,482,388, and assets of cash in hand and at Bank of England £10,413,847, cash at call and short notice £4,570,767, bills of exchange £7,783,272, Consols and other investments £11,039,595, and advances to customers and other securities £36,181,572.

WILLIAMS DEACON'S BANK.—The statement for November 30 shows liabilities on current, deposit and other accounts of £14,299,610, acceptances, credits opened and bills negotiated of £971,700, and rebate account £23,986 against assets consisting of cash on hand and at Bank of England £1,989,774, money at call and short notice £1,305,069, Consols and other investments £2,989,774, bills of exchange £3,954,029, advances on current accounts and loans on security £6,739,503

MINING RETURNS.

Abbontiakoon Block I.—Crushed 4,874 tons; fully treated, 4,765 tons (of 2,240 lbs.), yielding 1,630 ozs. from plates, and 1,235 ozs. from sands and slimes; total, 2,865 ozs.

Abosso.—Crushed 4,191 tons, 2,217 ozs.; tailings, 2,742 tons, 683 ozs.; old tailings, 1,040 tons, 168 ozs.; total, 3,068 ozs.

African Gold Dredging and Mining Concessions.—297 ozs., valued £1,187.

Akrokerri (Ashanti).—Crushed 3,130 tons, 1,049 ozs.; tailings, 1,780 tons, 154 ozs.; total, 1,203 ozs.

Associated.—Treated, 9,788 tons ore for £20,630.

Ayrshire Gold.—Crushed 7,820 tons, 1,555 ozs.; from 5,940 tons cyanided, 1,060 ozs.

Battlefields (Rhodesia). — Crushed 1,540 tons, 1,610 ozs.; cyanide 1,089 tons, 455 ozs.; slimes 460 tons, 110 ozs.

Bibiani Gold Fields.—Crushed 3,234 tons, 1,359 ozs.; cyanide 2,510 tons, £1,526; total, 1,718 ozs.

Brilliant Central.—Treated 1,160 tons quartz; value, including concentrates, £3,675.

British Broken Hill.—2,800 tons crude ore produced 466 tons concentrates, containing 284 tons lead and 12,116 ozs. silver; also 110 tons carbonates, making 2,910 tons mined.

Broken Hill South Blocks.—Treated 8,004 tons ore, assaying 16½ per cent. lead, 2.8 ozs. silver, 10.4 per cent. zinc per ton; produced 1,401 tons concentrates, containing 892 tons lead and 12,188 ozs. silver.

Burbank's Birthday.—Crushed 916 tons, 694 ozs.; tailings 1,296 tons, £409.

Burbank's Main Lode (1904).—Crushed 1,300 tons, 739 ozs.; cyanide 1,100 tons, 191 ozs.

Burma Ruby.—Washed 186,000 loads, producing rubies valued at Rs.146,000; royalties, Rs.18,000.

Cape Copper.—Cokiep, 1,107 tons at 13 per cent., 144 tons fine copper; Nababeep, 5,503 tons at 4 per cent., 220 tons fine copper; total, 364 tons fine copper.

Central Chili Copper.—Production 251 tons copper.

Charlotte Plains.—Charlotte, 690 fathoms, 347 ozs.; Havillah, 550 fathoms, 247 ozs.

Chinese Engineering.—Output, 20,500 tons; sales, 18,000 tons; consumption, 1,700 tons.

City and Suburban.—Crushed 8,801 tons, 25,200 oz.; profit, £10,898.

Consolidated Goldfields of New Zealand.—Crushed 4,438 tons ore, yielding £6,735. Golden Fleece—Crushed 555 tons ore, yielding £892. Wealth of Nations—Crushed 1,205 tons ore, yielding £2,503.

Consolidated Langlaagte.—Treated 23,396 tons, 7,809 ozs.; profit, £1,095.

Consolidated Main Reef.—Crushed 18,887 tons, 3,298 ozs.; sands and concentrates 18,887 tons, 2,857 ozs.; total, 6,155 ozs.; profit, £6,988.

Crown Deep.—Crushed 34,360 tons, 10,114 ozs.; sands 22,800 tons, 4,402 ozs.; slimes 11,730 tons, 1,135 ozs.; total, 15,652 ozs.; profit, £34,200.

Crown Reef.—Crushed 23,626 tons, 6,495 ozs.; sands and concentrates, 15,775 tons, 2,290 ozs.; slimes, 10,788 tons, 1,159 ozs.; total, 9,944 ozs.; value, £21,010.

De Lamar.—Crushed 2,800 dry tons, yielding $29,500; surplus, $4,300; miscellaneous, $200; $34,000.

Duff Development.—Prospecting dredge, 14 ozs.; No. 2 dredge, 33 ozs.

Durban-Roodepoort.—Quartz milled, 11,840 tons, 2,897 ozs.; tailings, 7,345 tons, 1,044 ozs.; slimes, 3,635 tons, 198 ozs.; total, 4,139 ozs.

Durban-Roodepoort Deep.—Crushed 12,280 tons, 3,467 ozs.; sands, 8,544 tons, 963 ozs.; slimes, 3,715 tons, 272 ozs.; total, 4,702 ozs.; profit, £4,300.

East Gwanda.—Crushed 5,864 tons, 1,485 ozs.; concentrates, 176 tons, 352 ozs.; cyanide, 3,500 tons, 434 ozs.; total, 2,271 ozs.; Smelter, 51 tons matter, 354 ozs.; 6 short tons metallic copper.

Eldorado Banket.—Crushed 2,675 tons, 1,481 ozs.; profit, £2,850.

Ferreira Gold.—Crushed 25,150 tons, 8,888 ozs.; sands and concentrates, 15,680 tons, 2,097 ozs.; slimes, 9,164 tons, 1,108 ozs.; total, 12,893 ozs.; profit, £30,502.

Foldal Copper.—Ore produced 791 tons (including 160 tons under-estimated for Oct.); ore shipped, 980 tons; ore sorted from tonnage already published, 2,743 tons.

French Rand.—Crushed 17,600 tons, 3,043 ozs.; sands and concentrates, 1,240 tons, 1,628 ozs.; slimes, 6,024 tons, 483 ozs.; total, 5,154 ozs.; profit, £3,029.

Gaika. — Crushed 2,262 tons, 823 oz.; tailings, 2,797 tons, 288 ozs.

Giant.—Treated 4,835 tons, 2,664 ozs.

Ginsberg.—3,758 ozs. from 11,060 tons treated; profit, £3,179.

Glen Deep.—Crushed 20,435 tons, 4,569 ozs.; sands 13,260 tons, 2,356 ozs.; slimes 7,195 tons, 530 ozs.; total, 7,455 ozs.; profit, £10,000.

Glencairn Main Reef.—4,115 ozs. from 19,500 tons treated; profit, £2,712.

Globe and Phœnix.—Crushed 6,551 tons, 2,302 ozs.; tailings, average assay value per ton, 3 dwts. Cyanide, 4,264 tons, 316 ozs. Slimes 1,810 tons, 221 ozs.; total, 2,839 ozs.

Golden Horseshoe.—Ore treated 22,617 tons, 12,453 ozs.; profit, £26,715.

Great Boulder Perseverance.—Treated 18,595 tons, 6,721 fine ozs. silver.

Great Boulder Proprietary.—Treated 13,357 tons, 12,341 ozs.; tailings, old, 9,222 tons, 868 ozs.; total, 13,209 ozs.

Great Fingall.—Ore, 21,036 tons, 4,759 ozs.; tailings, 20,599 tons, 1,893 ozs.; concentrates, 437 tons, 1,626 ozs.; total, 8,278 ozs.

Gwalia Consolidated.—Ore crushed 3,548 tons; sands 1,700 tons; slimes 1,760 tons; 857 ozs.

Hainault.—Crushed 6,194 tons, 1,712 ozs.

Hannan's Reward.—Crushed 3,250 tons, 479 ozs.; royalties, £300.

Ida H.—Crushed 1,600 tons, 888 ozs.

Jubilee.—Crushed 4,875 tons, 906 ozs.; cyanide 3,750 tons, 429 ozs.

Ivanhoe.—Crushed 19,560 tons, 3,040 ozs.; sands 9,170 tons, 1,696 ozs.; slimes 8,720 tens, 2,952 ozs.; concentrates 1,670 tons, 2,644 ozs.; total, 10,332 ozs.; profit, £21,050.

Jumpers Deep.—Crushed 18,510 tons, 4,651 ozs.; sands 12,900 tons, 1,464 ozs.; slimes 5,868 tons, 386 ozs.; total, 6,501 ozs.; profit, £4,600.

Jumpers Gold.—Crushed 10,063 tons, from mill 3,157 ozs.; from tailings 1,218 ozs.; from current slimes 300 ozs.; from accumulated slimes 271 ozs.; total, 4,946 ozs.; profit, £3,482.

Kalgurli.—10,805 short tons, 7,256 ozs.

Killarney Hibernia.—Crushed 2,363 tons, 327 ozs.

Komata Reefs.—Crushed 2,400 tons, £3,975.

Knights Deep.—40,140 tons, 13,129 ozs.; profit £21,017.

Lake View Consols.—11,672 tons treated, 3,242 ozs.; profit £1,216.

Lancaster Gold.—Crushed 15,400 tons, 2,105 ozs.; cyanide 10,428 tons, 1,151 ozs.; total output, 3,256 ozs.

Lancefield.—7,002 tons ore, 2,439 ozs.

Langlaagte Deep.—Crushed 31,072 tons, 7,088 ozs.; sands 20,151 tons, 2,724 ozs.; slimes 10,098 tons, 693 ozs.; total 10,503 ozs.; profit £10,500.

Langlaagte Estate.—Ore crushed 34,821 tons, 7,667 ozs.; concentrates 415 tons, 448 ozs.; tailings 22,140 tons, 2,618 ozs.; slimes 17,066 tons, 1,317 ozs.; total 12,050 ozs.; profit £21,500.

Le Roi.—Shipped 9,100 tons, containing 2,528 ozs. gold, 3,700 ozs. silver, and 190,700 lbs. copper.

Le Roi No. 2.—Jose—Shipped 2,500 tons; nett receipts £4,382, being payment for 2,000 tons shipped, and £325, being payment for 89 tons concentrates.

Luipaards Vlei.—Crushed 13,768 tons, 2,669 ozs.; tube mills, 397 ozs.; cyanide, 1,623 ozs.; slimes, 323 ozs.; profit, £7,019.

Matabele Reefs.—Blanket—Crushed 2,126 tons, 667 ozs.

May.—Crushed 15,260 tons, 3,246 ozs.; cyanide 11,435 tons, 2,062 ozs.; slimes 4,190 tons, 282 ozs.; total, 5,590 ozs.; profit, £11,627.

Messina (Transvaal) Development.—Output 289 tons copper ore; of this 61 tons shipping ore, assaying 50 per cent. copper; balance for future treatment.

Montana.—Drumlummon: Tailings and fines 2,000 ton, $9,800. Lucky Girl Group: Crushed 2,000 tons ore, $12,500.

Mount Boppy.—6,650 tons gave 1,129 ozs.; cyanide 4,088 tons, 1,523 ozs.; slimes 2,555 tons, 1,019 ozs.; concentrates tonnage 27, 179 ozs.; total, 3,850 ozs.

Mount Lyell.—Treated 30,895 tons ore. In addition 1,722 tons purchased ore and metal bearing fluxes. Converters produced 689 tons blister copper, containing: Copper, 680 tons; silver, 61,347 ozs.; gold, 1,532 ozs.

Mount Morgan (Queensland).—Treated 19,468 tons ore, 8,502 ozs.; copper reduction works 12,787 tons ore and metalliferous flux, produced 398 tons blister copper, containing 394 tons copper and 5,970 ozs. gold.

Mount Zeehan (Tasmania) Silver-Lead.—Output 595 tons silver-lead ore, containing 280 tons lead and 38,000 ozs. silver.

New Heriot.—Crushed 9,180 tons, 4,720 ozs.; profit, £8 423.

New Kleinfontein.—Milled 32,635 tons, 8,437 ozs.; sands 22,190 tons, 3,070 ozs.; slimes 10,400 tons, 782 ozs.; total, 12,289 ozs.; profit, £19,517.

New Modderfontein.—Crushed 23,384 tons, 6,965 ozs.; sands and concentrates 14,930 tons, 2,191 ozs.; slimes 12,163 tons, 1,200 oz.; total, 10,356 ozs.; profit, £17,581.

New Primrose.—Treated 19,262 tons, 7,776 ozs.; profit, £14,721.

New Rietfontein Estate.—Treated 17,200 tons, 8,815 ozs.; profit, £15,550.

New Unified Main Reef.—Treated 9,826 tons, 3,162 ozs.; profit, £2,900.

New Vaal River Diamond.—Diamonds registered by diggers £4,525.

New Zealand Crown.—Crushed 1,820 tons, value £5,352.

Nigel Deep.—3,588 tons, 1,958 ozs.; profit, £2,144.

North Broken Hill.—Treated 2,450 tons crude ore, producing 415 tons concentrates, containing 287 tons 16 cwts. lead, and 7,470 ozs. silver.

North Randfontein.—Ore crushed 17,108 tons, 3,939 ozs.; tailings 10,560 tons, 2,061 ozs.; slimes 6,470 tons, 733 ozs.; total, 6,733 ozs.; profit, £9,600.

North White Feather.—Crushed 1,980 tons, 791 ozs.

Nourse.—Crushed 33,880 tons, 8,865 ozs.; sands 23,981 tons, 3,737 ozs.; slimes 9,827 tons, 705 ozs.; total, 13,307 ozs.; profit, £19,550.

No. 2 South Great Eastern.—460 tons, 304 ozs.

Pena Copper.—Output of ore, 11,800 tons; shipments, 10,817 tons.

Penhalonga.—Ore crushed, 7,600 tons; total, 1,549 ozs.; profit, £3,001.

Princess Estate.—Crushed 8,687 tons, 2,869 ozs.; cyanide, 6,162 tons, 1,178 ozs.; total, 4,047 ozs.; profit, £5,106.

Oroya Black Range.—Crushed 3,968 tons, 2,379 ozs.

Oroya-Brownhill.—Crushed 11,356 tons, 7,079 ozs.

Porges Randfontein.—Ore crushed, 14,610 tons, 3,798 ozs.; con

centrates, 1,445 tons, 561 ozs.; tailings, 9,072 tons, 1,582 ozs.; slimes, 3,931 tons, 492 ozs.; total, 6,433 ozs.; profit, £10,690.

Prestea Block A.—Crushed 7,750 tons, 3,050 ozs.; tailings, 4,794 tons, 751 ozs.; total, 3,082 ozs.

Rezende.—Crushed 3,200 ton, 742 ozs.; sand 2,525 tons, 297 ozs.; concentrates 18 tons, 95 ozs.; total, 1,134 ozs.; profit, £1,300.

Rhodesia.—Colleen Bawn—Crushed 810 tons, 321 ozs.; cyanide 553 tons, 648 ozs.; slimes 400 tons, 340 ozs.

Rhodesia Consolidated.—Nelly—Crushed 1,720 tons, 1,205 ozs.; cyanided 850 tons, 501 ozs.; total, 1,706 ozs.

Robinson.—Crushed 38,000 tons, 17,223 ozs.; sands and concentrates 25,564 tons, 6,319 ozs.; slimes 13,560 tons, 1,758 ozs.; total, 25,300 ozs.; profit, £77,896.

Robinson Central Deep.—Crushed 20,650 tons, 8,360 ozs.; sands and concentrates 12,800 tons, 2,461 ozs.; slimes 7,702 tons, 751 ozs.; total, 11,572 ozs.; profit, £32,238.

Robinson Deep.—48,318 tons, 20,621 ozs.; profit, £40,189.

Robinson Randfontein.—Ore crushed 15,004 tons, 3,096 ozs; concentrates 1,450 tons, 430 ozs.; tailings 9,000 tons, 1,891 ozs.; slimes 4,393 tons, 573 ozs.; total, 5,984 ozs.; profit, £7,200.

Roodepoort Central Deep.—Crushed 8,418 tons, 2,139 ozs.; cyanide 5,780 tons, 998 ozs.; total, 3,137 ozs.; profit, £2,524.

St. David's.—Crushed 610 tons, 455 ozs.

Selukwe.—Crushed 6,004 tons, 1,720 ozs.; tailings assay, 2·50 dwt. per ton; cyanide 3,850 tons, 494 ozs.; total, 2,214 ozs.

Simmer and Jack East.—33,670 tons, 9,394 ozs.; profit, £6,651.

Simmer and Jack Proprietary.—62,140 tons, 24,210 ozs; profit, £49,165.

Sons of Gwalia.—Ore crushed 12,903 tons, 2,992 ozs.; tailings 7,345 tons, 1,125 ozs.; concentrates 210 tons, 618 ozs.; slimes 5,070 tons, 456 ozs.

South Kalgurli.—Crushed 8,174 short tons, 2,364 ozs. fine gold.

South Randfontein.—Ore crushed 15,546 tons, 3,221 ozs.; concentrates 1,575 tons, 394 ozs.; tailings 9,425 tons, 1,527 ozs.; slimes 4,616 tons, 495 ozs.; total, 5,637 ozs.; profit, £4,500.

Surprise.—2,825 tons, 953 ozs., equivalent to 6·74 dwt. per ton; cyanide 363 ozs., from 3,244 tons.

Talisman.—Treated 4,228 tons, value £20,768.

Taquah and Abosso.—Crushed 4,626 tons, 8,399 ozs.

Theta.—Crushed 1,615 tons, 282 ozs.; cyanide, 989 tons, 69 ozs.

Tingha.—Production of tin 29 tons 9 cwts.

Tomboy.—Crushed 8,800 tons ore, value $57,000; concentrates shipped 433 tons, value $29,500.

Treasury.—Crushed 8,850 tons, 1,738 ozs.; sands and concentrates 9,433 tons, 1,1780 ozs.; total, 2,916 ozs.; profit, £1,224.

Tyee Copper.—Treated 115 tons Tyee ore, value, after deducting refining charges, $1,588; and 5,273 tons customs ore producing 473 tons matte.

Victoria Proprietary.—Crushed 1,153 tons, 551 ozs.

Village Deep.—Crushed 26,900 tons, 5,191 ozs.; sands and concentrates 20,102 tons, 3,472 ozs.; slimes 7,085 tons, 624 ozs.; total, 9,287 ozs.; profit, £10,000.

Village Main Reef.—Crushed 40,000 tons, 9,721 ozs.; sands and concentrates 30,266 tons, 3,930 ozs.; slimes 13,151 tons, 1,145 ozs.; total, 14,796 ozs.; profit, £27,515.

Vivien.—3,003 tons, 612 ozs.; tailings 2,100 tons, 263 ozs.; concentrates 52 tons, 45 ozs.

Waihi Grand Junction.—Crushed 3,400 tons, £4,930.

Wanderer (Selukwe).—Cyanide 15,867 tons, 1,619 ozs.

West Rand Central.—Crushed 2,625 tons, 479 ozs.; cyanided, 2,000 tons, 396 ozs.; slimes, 1,225 tons, 181 ozs.; total, 1,056 ozs.

Willoughby's Consolidated.—Crushed 1,372 tons, 652 ozs., equivalent to 9·504 dwt. per ton; cyanide, 1,200 tons, 155 ozs.

Windsor Gold.—Crushed 5,210 tons, 661 ozs.; cyanide, 3,930 tons, 695 ozs.; total, 1,356 ozs.

Witwatersrand.—Treated 34,890 tons, 11,221 ozs.; profit, £17,019.

Witwatersrand Deep.—Crushed 32,920 tons, 9,425 ozs.; sands and concentrates, 33,381 tons, 4,983 ozs.; total, 14,408 ozs.; profit, £27,785.

Wolhuter.—Crushed 20,900 mill tons; sands and slimes, 20,900 tons; from mill, 3,623 ozs.; from sands, 2,751 ozs.; total, 6,374 ozs.; profit, £6,116.

Worcester Exploration.—Crushed 4,300 tons, 1,124 ozs.

Zeehan-Montana.—Output silver-lead ore 315 tons, containing 138 tons lead, and 22,000 ozs. silver.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Antofagasta (Chili) and Bolivia.—2½ per cent. on the preferred ordinary stock, and an interim of 2½ per cent. on the deferred ordinary stock, payable Jan. 1.

Denver and Rio Grande.—Semi-annual of 2½ per cent., on the preferred stock, payable Jan. 15.

MINES.

Associated Northern Blocks (W.A.).—Final of 3s. per share, payable Jan. 15, making 25 per cent. for year ended Sept. 30.

City and Suburban Gold.—5 per cent.

Crown Deep.—Interim of 60 per cent. for half-year ending Dec. 31, payable about Feb. 4.

English Crown Spelter.—Interim of 6d. per £1 share for 1907.

Ferreira.—150 per cent.

French Rand.—7½ per cent., payable about Feb. 4.

Geldenhuis Deep.—Interim of 17½ per cent. for half-year ending Dec. 31, payable about Feb. 4.

Geldenhuis Estate and Gold.—Interim of 35 per cent., payable about Feb. 4.

New Modderfontein.—Interim of 5 per cent. for half-year ending Dec. 31, payable about Feb. 4.

Nigel Gold.—15 per cent. (3s. per share)

Rose Deep.—Interim of 15 per cent for half-year ending Dec. 31, payable about Feb. 4.

Van Ryn.—Interim of 15 per cent. for half-year ended Dec. 31, payable 10th prox.

Alexandria Water.—Interim of 2s. 6d. per £5 share.

Anglo-Portuguese Telephone.—Interim of 3 per cent.

Bank of Roumania.—Interim of 6s. per share.

East Surrey Water.—Interim of 3½ per cent.

Eastern Extension Australasia and China Telegraph.—Interim for quarter ended Sept. 30 of 2s. 6d. per share.

Eastern Telegraph.—Third quarterly interim of 1½ per cent. on the ordinary stock in respect of profits for year ended Dec. 31, payable Jan. 15.

Globe Telegraph and Trust.—Quarterly of 2s. per share on the ordinary shares.

Jhanzie Tea.—Interim of 2½ per cent., payable Dec. 19.

Jokai (Assam) Tea.—Interim of 2½ per cent. on the ordinary shares.

Kapp and Peterson.—Interim of 7½ per cent. on the ordinary shares.

"Kelly's Directories."—Usual interim on the ordinary shares at the rate of 5 per cent. per annum for half-year ended Sept. 30.

Lautaro Nitrate.—Interim of 6s. per share, payable Jan. 1.

London and Lancashire Life.—Half-yearly to 31st inst. at the rate of 8s. 3d. per share per annum.

Newcastle Breweries.—At the rate of 11 per cent. per annum on the ordinary shares for half-year ended Oct. 31, making 8 per cent. for the year.

S. A. Brain and Co.—Further of 3½ per cent., making 6 per cent. for year to Oct. 9, placing £4,000 to reserve and £2,000 to compensation reserve, carrying forward £2,863.

Sephinjuri Bheel Tea.—Second quarterly of 7½ per cent. on account season 1907.

Transvaal and Delagoa Bay Investment.—2s. per share.

William Cooke and Co.—Interim of 2½ per cent. on ordinary shares for half-year ended Sept. 30.

Answers to Correspondents.

Deposits against future queries may be lodged with the Publisher.

O. E. G.—(1) We certainly look for lower levels, but this company's field of operations is not affected by the trouble, and the stock seems to us a good investment. (2) None of these are equal to the above, although all should be good enough. (3) Quite safe, but you must remember that it has only about 45 years more to run, and if you buy you would have to make provision out of dividends for loss on repayment of capital. Whether the price is likely to go to 10 again or not we would not like to say. You might, perhaps, get a copy of the report at 4, King William Street, E.C.

R. S. G.—We should be disposed not to accept the offer, as under existing conditions in that country the new bonds are almost certain to fall in value. Your two questions refer to one security, and we therefore hold 1s. to your credit.

D. S.—We are doubtful if it can continue to do so much longer. Not out of profits at any rate.

G. R.—(1.) Do not buy more in the present state of the metal market. If you should want to average later, it would be better to buy these rather than No. 2, as the ore in the latter is mostly of low grade.

L. S. M. O.—No, do not join the people who send you these papers. Better pocket the known loss.

F. P. C.—Yes, the office is quite a sound one.

B. G.—(1) Very speculative, and if you can get out at a profit you should do so. (2) This is not one of the best of the companies, but the shares give a high return, and might be kept.

Montcalm.—A fairly good security, but under present conditions hardly worth buying at the price you quote.

Hukeem.—The security seems as good as anything of the kind can be, and should be a safe enough permanent investment. You have inadvertently sent 3d. short of the sum mentioned in your letter.

Alpha.—(1) This is not a share we care to recommend just now. The most inside people are bears. (2) Big dividends here, yes, but the life is probably only five or six years. (3) A better thing, because the life is more than twice that of No. 2, but still not cheap. (4) About the same life as No. 3 and just about as dear. (5) This will probably live twice as long as either 3 or 4 and if dividends keep up the shares should be a fair purchase. (6) Also a life as long as a dog's, and rather attractive. (7) Quite a speculative affair, life not known, things in that quarter of the world have a nasty way of snuffing out. Cannot recommend.

Mr. Frederick Green, of Messrs. Frederick Green and Co., has been elected a member of the Court of Directors of the London and India Docks Company in place of Mr. Robert Bruce Ronald, deceased.

TRADE AND PRODUCE.

Wheat.—The markets have been only moderately attended this week, and demand has generally been poor for both spot and future wheat. Prices are weaker, spot parcels by fully 1d. per cental below last week's rates. English wheat is about 6d. per quarter lower on some markets, where sellers, who are anxious to reduce their stocks to the lowest possible limit, are making concessions to persuade millers to buy, but, on the whole, it is firmly held, and farmers' deliveries, which amounted to 54,629 qrs., obtained an average of 34s. 7d. per qr. against 83,264 qrs. averaging 26s. 1d. a year ago. Imports from abroad are again lower at 311,827 qrs. against 386,423 qrs. in the same week of last year, and the quantities of wheat and flour on passage to the United Kingdom are 1,920,000 qrs. against 1,960,000 a week ago. American markets were lower at the opening, influenced by the weak foreign cables and continued liquidation. Wednesday saw a sharp advance, as it was discovered that the market was oversold, but European markets refused to respond to the improvement, and it did not last.

Wool.—No improvement can be said to have taken place in the tone of market centres in raw material. Bradford trade remains very dull, the only business being done is that for supplying immediate requirements, or when sales are forced on account of financial difficulties, and prices have dropped considerably from the highest point. Future business is absolutely at a standstill, and the depressed position of colonial wools is having a bad effect upon home produce, sending them down in price. Leicester market is also unsettled, though not so depressed as the other, and a very fair business is being done in good sound wools. Low grades and faulty descriptions are unsaleable even at the reduced quotations. Home trade in manufactured goods is not particularly brisk either, except with regard to cheaper goods.

Cotton (from our Manchester correspondent).—Various influences have been at work this week in our market to restrict operations in yarn and cloth, and most sellers have experienced a rather discouraging time. The raw cotton situation has been very much to the front in view of the various figures from the States. The Government estimate on publication caused a rather smart drop in values, but ultimately when the figures were more fully explained prices hardened. Statistics from the other side are very little to be relied upon, and manipulation is rampant amongst dealers in the American markets. Manchester, on the whole, is looking forward to a crop of quite 12,000,000 bales. A feature has been the large buying on the spot in Liverpool, the total sales on several days being 15,000 bales. Users are rather inclined to go "long" at the present time. Egyptian cotton has not shown much change, but rather more business has been done. The ring spinners' dispute is not much nearer a settlement. The masters and workpeople do not seem to make much headway in negotiations. It is feared that the trouble will spread, and the outlook is rather serious. In piece goods for export there have not been many offers of a practicable character placed before sellers. Small lines for Madras and Bombay have been mentioned, but Calcutta is disappointing. Makers of shirtings in certain instances have recently been fortified by fair orders, and they are not so easy to deal with. China, on the whole, remains quiet, and in view of the fact that silver continues to decline in price, there is not much hope of free operations for some little time. Buyers for the Mediterranean markets are hampered by various matters, and no general improvement can be recorded in the prospects. Engagements of manufacturers vary to a considerable extent. Offers for printing cloths have been fairly numerous, but in few instances can prices be obtained which are considered satisfactory. Heavy goods have again dragged in demand. Home trade requirements at the moment are not important. Distributors, owing to the high Bank rate, are endeavouring to keep their stocks down. In American yarns for home consumption a fair trade has transpired, and spinners have maintained their position fairly well. There is some difficulty in obtaining good twist cotton, and producers of best qualities are holding for top prices. Weft is losing ground somewhat. There has been a fairly large business done in 40's mule for India. Bolton yarns have been slightly irregular, but fine numbers in weft are healthy owing to engagements.

Sir Jacob Behrens and Sons give the two reports that have influenced the American market this week. First, the ginners' report published on the 9th inst., which gives the number of bales ginned up to December 1 as 8,338,000 against 10,027,868 bales last year and 8,689,663 bales in 1905. Then the Bureau report, published on the 10th inst., estimating the yield to date as 5,581,968 bales, not including linters, and this was thought to indicate a crop of about 12,000,000 bales. The market was not prepared for so large an estimate, and the result was a smart drop, both in New York and also in New Orleans. But yesterday showed a reaction, consequent upon the Bureau report having been based upon bales of 478 lbs. nett instead of upon bales of 500 lbs. nett as was supposed. This would indicate a crop of only 11,163,000 bales. Receipts are gradually improving, consequent upon the increased demand of the past week or two, but the amount of cotton in sight is 1,200,000 bales below last year. This fact, with the prospective reduced supply of Indian cotton, is not contributory to lower prices.

Coal.—Trade is quieter in most of the colliery districts now, the depression in the iron and steel industries reacting upon coal to some extent. Shipments from the North are not so heavy and at the Welsh ports the severe storms have checked business to rather a serious extent. Prices show a weakening tendency at Cardiff, and there are those who declare that, though a spurt may be given immediately after the holidays next year, trade does not promise well. At present there is still a good demand for coal in the open market, and in one or two parts business is looked upon as being still very good, particularly the coastwise traffic of Yorkshire, which during the eleven months of the year has exceeded a million tons sent from Hull alone.

Copper.—A bearish mood has prevailed in the markets all the week. It was fairly active on one or two days, and yesterday showed a fractional advance on near delivery, but generally the tone was dull and slack. Liquidation, the set-back in American quotations, in spite of the reports that production was to be restricted, and heavy shipments all helped to depress the market and drive prices down. On Thursday afternoon prices closed at £58 15s. for cash and £60 5s. for three months, but to-day a slight rally lifted them again to £59 2s. 6d. and £60 7s. 6d. respectively.

Tin.—The market opened decidedly weak and values depressed, and reports from the East that about 400 tons had changed hands at prices ranging from £133 to £132 c.i.f. did not help to improve matters. Prices on Wednesday were down to as low as £125 10s. for cash and £126 15s. for three months, but on Thursday they recovered a little though Eastern c.i.f. quotations were down to £128. Offerings were restricted and speculative buying, chiefly on Chinese account, good, and values rose about £2 on the day, but to-day they eased off again and closed at £125 10s. for spot and £127 for future metal.

Iron and Steel.—Demand gets less and less, and trade is more depressed than ever. Buyers are only taking for their immediate wants, forward business being quite neglected in the likelihood that still lower values will be declared before long, though some think that the downward limit has been reached. Barrow hematite quotations have fallen another 1s. this week, and East Coast mixed numbers are down to 66s., or 16s. 6d. below the highest price of the year. In Cleveland pig-iron nothing is doing, merchants are experiencing the worst time they have had for over four years, and look to a worse still before they improve. The only good thing about this state of affairs from the producer's point of view is that stocks are not being allowed to accumulate.

Tea.—Very little whole leaf was obtainable at the Indian auctions this week under 7¾d. per lb., prices for all teas up to 8½d. being quoted ¼d. per lb. dearer. Better grades also had a firm market, and of the 35,891 packages brought forward 31,639 were sold on garden account, averaging 8.40d. against 7.97d. a year ago and 8.36d. last week. Ceylon offerings were only 15,841 packages and for these prices were about ¼d. per lb. dearer for all teas up to 9d. Where quality was maintained in higher grades the market continued strong also, but as is usual at this time of the year invoices in this respect have shown some falling off of late; 8.60d. was the average price obtained for the whole sale against 8.66d. in 1906. Javas had a small sale of 2,210 packages, and they sold at rather dearer rates.

Sugar.—The dulness in America changed suddenly this week and prices advanced 0.22½ cent., raising spot quotations to 3.85 cents. The move was interpreted here, says Mr. Czarnikow, as confirming all the adverse crop rumours from Cuba, and in consequence the better tendency of last week in this market was fully maintained. Rain is still wanted in the Western provinces, and if there be sufficient cane for 1,100,000 to 1,200,000 tons sugar, it is not certain that the weather will be favourable for grinding. Some exporters talk of less than 1,000,000 tons, but it is as well not to forget experiences and disappointments of previous years, when estimates were always widely apart and neither the worst nor the best figures were ever realised. The crop will begin much later than last year, which is in favour of better results, as last year's early grindings gave a very deficient yield. In addition to this shortage, the returns from those German and French factories which have finished work are unsatisfactory. About 50 German factories return 15 per cent. less roots than last year; being the first to finish, they are, of course, supposed to be the least favoured, and if some good factories are amongst them, it is well to remember that the crop in some of the usually good Northern districts was grown this year under unfavourable atmospheric conditions. In France, too, 700,000 tons raws is now the maximum figure mentioned, and the total for Convention countries should be at least 150,000 tons below last year. Russian sugars therefore will be wanted next season, though statistics in November may not look very promising. But consumption remains good. The Austrian excise duty will be reduced from 38 to 30 kronen per 100 kilos, but it is not quite certain from which date. The French *détaxe de distance* (refunding transport from factory to Marseilles, &c.) may be reduced from 2 fcs. to actual cost, as it involved a profit to receivers. From the partial figures (including cane imports) to hand, stocks in Europe would have increased nearly 100,000 tons more than last year, so that the European deficiency in stocks might now be covered, except for short production. It then becomes a question whether America will want beet whilst we receive Russians, and how much less we shall produce during the later months. From the trade point of view business is far from satisfactory, the margin between 88 per cent. and granulated being 1s. 5¼d., involving a loss of about 6d. per cwt. Our refiners raised their prices 1½d., being a total of 3d. since October 20, whilst beet moved from 9s. 3d. to 9s. 9d. They are naturally very reluctant buyers, and the advance has checked business altogether for the present.

RAILWAY TRAFFIC RETURNS.

FOREIGN

Alberta Railway and Irrigation.—Earnings for the week ended Dec. 7, $6,849, increase $3,034; aggregate from July 1, $120,895

Argentine North Eastern.—Traffic receipts for week ended November 8, £3,150, decrease £111; aggregate from July 1, £55,487, decrease £2,384.

Assam Bengal.—Traffic receipts for week ended November 9, Rs. 95,608, decrease Rs. 10,109; aggregate from July 1, Rs. 18,53,651, increase Rs. 1,01,977.

Bilbao River and Cantabrian.—Traffic returns for November, £9,071, decrease £2,123; aggregate from January 1, £100,047, decrease, £12,676.

Buenos Ayres Central.—Gross receipts for November £9,341, decrease £204; aggregate from Jan. 1, £122,983, increase £12,321

Canadian Northern Railway.—Traffic receipts for week ended Dec. 7, $188,800, increase $63,300, total from July 1, $4,695,600, increase $1,190,200.

Egyptian Delta.—Traffic receipts for week ended November 23, £6,126, increase £217; aggregate from January 1, £171,770, increase, £18,291.

Lucknow Bareilly Railway.—Traffic receipts for week ended November 9, Rs. 20,551, decrease Rs 8,201; aggregate from July 1, Rs. 4,92,639, increase Rs. 40,003

Midland Uruguay.—Receipts for month of November, £6,600, increase £787; aggregate from July 1, £30,377, increase £3,135.

North Western of Uruguay.—Traffic receipts for Nov., $20,000, decrease $965; aggregate from July 1, $106,256, increase $5,319.

Quebec Central Railway.—Traffic receipts for the 1st week of December, $16,128, increase $4,295; aggregate from January 1, $952,909, increase $95,236.

Quebec and Lake St. John.—Traffic receipts for Sept. $65,604, increase $3,149; aggregate $471,220, increase $52,696.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended November 9, Rs. 19,475, decrease Rs. 6,650; aggregate from July 1, Rs. 4,10,211, increase Rs. 39,712

Uruguay Northern.—Gross receipts for month of Aug., £1,934, increase, £373; aggregate from July 1, £3,675, increase £105.

White Pass and Yukon Railway.—Traffic receipts for week ended November 30 amounted to $1,300.

ENGLISH.

Cleator and Workington Junction.—Receipts for week ending December 8, £1,460, increase £7; aggregate from July 1, £30,892, increase £1,576.

Cockermouth and Keswick Railway.—Receipts for week ending December 7, £708, increase £92; aggregate from July 1, £22,203, increase £890.

East London Railway.—Traffic receipts for September, £3,625, decrease £377.

East and West Yorkshire Union Railways.—Traffic receipts for the week ended December 7, £489, increase £79; aggregate from July 1, £10,116, increase £1,841.

The Investors' Review.

The Week's Money Market.

BANK RATE 7 PER CENT. (Raised from 5½ per cent. to 6 per cent. on Monday, November 4, and from 6 per cent. to 7 per cent. on Thursday, November 7.)

Norfolk House, Friday Evening.

Week after week the Money market plays for a reduction in the Bank rate. Last Monday, for instance, the discount rate on three months bank bills subsided to 5½ per cent., but it did not stay there very long, in spite of the ease of the short loan market, where call loans have not risen to 5 per cent. on any day. Seven-day money has been obtainable at 4½ to 4¾ per cent., thanks to the increase in the supply of floating credit and the comparative restriction in demand. So easy did the market become that the discount houses plucked up courage to carry through the reduction in their deposit rates discussed a week ago. They reduced them by ½ to 4½ for call and 4¾ per cent. for notice money.

Why is short money thus so cheap? The Bank return reveals the cause. Other deposits now amount to £45,023,000, which is £727,000 more than a week ago, and this increase has been obtained in spite of the fact that other securities to the amount of £1,240,000 have run off, large quantities of bills having been falling due daily at the Bank of England. How is a market to resist increasing wealth of this description, especially when accompanied by such a liberal expansion in the stock of gold? It will have to resist all the same for the universal credit position has not in any way mended, and bill brokers soon began to discern this. They found American buyers sweeping away all the gold available in the open market last Monday, as well as rooting around after such parcels as could be obtained in the open market elsewhere during the week. Yesterday £103,000 in United States gold coin was actually withdrawn from the Bank for the States, and the Bank also lost £280,000 in sovereigns taken for South America, for Brazil principally, if not wholly. And there are warnings of further withdrawals, for the Argentine exchange has gone against us, and the time must be at hand when the metal will have to be shipped to Buenos Ayres in liberal amounts. Nor should Egyptian probabilities be overlooked; the cotton crop cannot be financed for ever.

"But we are getting richer and the Bank rate is attracting gold," the optimists keep harping. In one sense this is true. Compared with the Bank return of the week ended November 6 last, the week in which the Bank rate had to be raised to 7 per cent., the total stock of coin and bullion held is now nearly £5,500,000 larger, and if all this gold had come in merely as a consequence of the high Bank rate we should have agreed that the position is distinctly improving. But where have we got this gold? £3,500,000 of it, there or thereabouts, has been supplied by the Bank of France, and the whole of the amount must be returned to it by the end of February. Another £2,500,000 or so has come from Germany, not as an exchange operation, but at the instance of Russia, which had large payments to make to Japan that could only be financed by help of this gold. Finally £2,000,000 has been released from the hoard of the Simla Government, and that also has nothing to do with the attractive power of a 7 per cent. Bank rate. The Indian Government has merely stopped the sale of its Council drafts, and is meeting its obligations in London by help of gold gathered up through forcing upon the Indian people a debased currency. And the effect of this method of tiding the difficulty over has been to raise rates of interest in the Peninsula, as our table of Bank rates shows—the Bank of Bombay has gone up to 6 per cent. this week—so that trade in India is being hurt in order to produce an appearance of strength on our market. Altogether, therefore, we have received about £8,000,000 in gold from sources other than those tapped by the high Bank rate, and less than £5,500,000 of that has been retained, so that the Bank is essentially in no better a position than it occupied before its rate went up to 7 per cent. Had it not been for the assistance of the Bank of France and of the Simla Government, or for the obligations of Russia, we should have probably had an 8 or perhaps a 10 per cent. Bank rate before now. The 7 per cent. Bank rate has attracted a little gold, but that has all gone again and much more.

Let it be noted also that monetary affairs do not improve on the Continent or anywhere in the world. In Germany the open market discount rate has risen to 7¼ per cent., and failures are occurring daily, most of them never noticed in this country. The Bank of France looks stronger this week than last, solely because its note circulation has shrunk by £4,016,000 for its gold is actually £124,000 less. That the gold, however, should have diminished so little during the past two or three weeks is proof positive that very little of the metal has been allowed to go to the United States direct from the Bank. As a matter of fact, the American buyers are not able to give satisfactory security that the gold would be returned at the specified dates. This, perhaps, is a favourable point for us, which deserves to be noted, but the general position abroad is as adverse as ever, and we cannot tell the moment when unpleasant surprises may greet us. Witness the failure of the Mobiliario Bank in Chile, which has involved losses here, and do not forget that our market is carrying many millions of American bills drawn against produce which is not coming forward at all freely to meet them. What will happen if any material portion of this mass of paper has to be renewed early next year?

The revival of United States and other foreign demands for gold and other considerations soon corrected the tendency of the discount market to flabbiness, and rates have gradually hardened since Monday afternoon, until yesterday many houses asked 6 per cent. on three months' bank bills, and business could not be done anywhere under 5¾ per cent., although sellers sometimes quoted ⅛ under that figure. We quite expect to see quotations harden still further between now and the end of the year. A further small shipment of gold had that effect this afternoon. At first weak, the market stiffened, and closed at 6 per cent. as a minimum working rate for three months' bank bills, but the fine rate for sixes was still no better than 5 per cent. Joint-stock banks were buying bills from the brokers at 5 13/16 per cent. Short loans were still easy at 4½ to 5 per cent., but this ease will not last long now. The India Council got 5¼ per cent. on renewals into January.

There will be only about £480,000 in gold in the open market next Monday.

Calls on new issues falling due next week aggregate £2,500,000, the heaviest of them being on Thursday, when £1,170,000 becomes payable. £450,000 on the Brazilian loan, £600,000 on South Manchurian bonds, and £120,000 on Bombay Electric Trams preference. On Tuesday the British Coalite Company will want £375,000, and Buenos Ayres and Pacific Railway debenture stock draws in £200,000.

SILVER.

Except for a few covering orders, the silver market has been more or less neglected, and prices once more drifted downwards. By Tuesday they were down to 25 7/16d. per oz. for cash and 26d. per oz. for future delivery, or the lowest point touched since April 10, 1905. The decline was only checked at those levels by the fact that the American Government is now buying more freely, and took 900,000 ozs. off the market during the week. A demand from the Far East caused a sharp jump to 26¼d. and 26 7/16d. per oz. respectively on Wednesday, but the effect was very transitory, and on rather free selling from China quotations have since gone back to 25½d. and 25 13/16d. per oz. Applications for the Rs. 30,00,000 of Council drafts on India offered this week amounted to no more than Rs. 12,45,000, all in bills, and of these only Rs. 45,000 were allotted, tenders at 1s. 3 29-32d. per rupee receiving in full. Next Wednesday another Rs. 20,00,000 will be offered.

The Stock Markets.

Not much progress has been made in the liquidation this week by the "derrick" workers, as the City Editor of the *Morning Post* calls the engineers of the New York market, and every day their task becomes more difficult. At the same time there is quite a multitude of people in this country who seem to be incapable of grasping the most rudimentary facts surrounding the actual condition of markets both at home and abroad. We hear of brokers who get abused by their clients for not permitting them to buy this and the other wind-inflated market counter which has been lifted in price during the last week or two. A prominent example is Can. Pac. shares, which have been "donkey-engined" up in a magnificent style illustrative of the skill of the bank-controlling potentates of finance. That there is no substantial ground for this advance, that it is a mere triumph of the bull over the bear, that actual business conditions in Canada are strained and rapidly becoming worse, are factors that do not count in the minds of the crowd, and so there is an itch to buy which cannot be restrained. Happily it has not gone very far as yet, not far enough by any means to enable holders of stocks to unload so largely upon the unreasoning mob as to release them from their mortgaged positions. For it is only differences the public can be stripped of, and when the crop of these gets easy down goes the price again.

As long as credit can be kept from an open break on our own market and on the Canadian market the difficulty in maintaining prices is doubtless lightened to some extent by the purchases of the foolish people who are attracted by a rising market as moths to the burning candle. Credit, however, is too overloaded to be much helped by contributions from the remaining cash or assets of these unwise buyers, and it is really the bear who does more to help the master

gamblers than the outside bull. Therefore we must keep insisting that no course of action could be more indiscreet at the present time than to sell bears in a mere amateurish way.

The man who sells what he does not possess becomes a market prop in spite of himself, and even on Wall Street, where credit is in a state of paralysis so far as the great mass of market habitués is concerned, it is not difficult for the giant gamblers to fleece those who put themselves in this servile position. They can work the machine by help of Clearing-house certificates, I.O.U.'s, any form of credit they can devise, down to Panama bonds.

But the crisis is in no sense over, and these unwholesome heaves of market prices are in no sense to be interpreted to mean that it is. The crisis is only beginning, and years must elapse before its consequences can be obliterated with the assistance of bounteous harvests and peace throughout the world. It is a crisis, we must insist, that affects every civilised country, that is curtailing production everywhere, and forcing people back upon a genuine cash basis for business. It affects the power of Governments to raise revenue sufficient for their swollen requirements, and pinches individual citizens of all classes, except, perhaps, the few who are inordinately rich. Thus it is a crisis differing in character and degree from any the present generation has ever experienced. All previous calamities of the kind have been brought about by some startling failure which has produced a spasm of terror under whose sway quotations of marketable securities went down like a plummet. The spasm was always followed by a slow recovery after a more or less brief delay. The present crisis, however, is a wasting away which produces a stream of failures, and gradually drives firms and institutions to the wall, but which hitherto has not brought about any sensational collapse calculated to strike the imagination and paralyse credit. And yet what could be greater, more stupendous, than the banking collapse in the United States? We cannot realise it here, and so it does not terrorise our minds as it would do were we to pass through a like experience. Just imagine what the condition of business would be in this country if no bank cheques could pass because of the general distrust into which our banks had fallen. That would be the end of all things for England, and yet this is the experience the United States is going through. As far as we can ascertain there is not a single bank from one end of the republic to the other which is carrying on its business at the present hour in the way it did before the crisis began. Some banks are accumulating cash against the day when they may open their doors again and allow their depositors to act as they please, but none of them have yet resumed the regular course of daily business. We do not see when they can resume and begin to think that a large loan will have to be negotiated by the Washington Government in order to procure the means whereby the note circulations of the National Banks may be redeemed and cancelled by payments in gold. The Government will have to assume the direct responsibility for these note issues at the very least, and make provision for their gradual extinction.

Contangoes.

This week business has been interrupted by the fortnightly settlement, which went through without much trouble coming to the surface. One firm had itself "hammered" on Contango day because a loan was called in by its bankers, they say, but otherwise all went quietly enough. Money, too, was a little cheaper than at the previous settlement, bankers charging the general run of borrowers for the new account only 6½ per cent. against 7 per cent. Inside the market, however, contangoes were quite as stiff, and on Home Railway stocks sometimes drastic. The gamble for the rise in Great Northern deferred, for instance, has produced such an unwieldy bull account that some speculative holders had to pay 5s. to get their bargains continued. That was at the rate of more than 12 per cent. per annum, and few paid less than 9 per cent. Seven to eight per cent. was a fairly general rate in this market, and in no instance was the contango lower than a fortnight ago.

On Foreign Government stocks, however, money was sometimes 1 per cent. less than at the end of November, 6 or 5 to 7 per cent. against 6 to 8 per cent. Rates were also higher on Grand Trunk speculative stocks, especially on the ordinary, but money on American Railroad stocks was about 1 per cent. cheaper at 6 per cent. as an average. In connection with these shares and Canadian Pacifics it is to be noted that the account carried here is in an artificial state. Continental holders of Canadian Pacific shares, for instance, who have sold during the crisis have for the most part abstained from delivering their shares, and that tends to lighten the weight of such paper carried here. The same observation applies to the Continental sales of many American Railroad shares, the account in which on our market is, as it were, hung up between Wall Street and Berlin or Amsterdam. Were it not for some counterpoise of this description contangoes on these Yankee securities would have ruled much higher than they have done. On Argentine Railway securities money was about ½ per cent. cheaper at 7½ to 8 per cent., because there is no relief of this description in that market. The bull account in Mexican Railway stocks has expanded and driven contangoes up, especially on the ordinary stock, but money was less difficult to obtain on both Rio Tinto and Hudson's Bay shares.

Trustee and Other Securities.

In our market business has been quiet enough throughout the week and the tendency of prices has been, on the whole, unfavourable. In spite of the comparative cheapness of short credits in the Money market Consols are down from 5s. to 10s. and all other Home Government securities with them. India sterling stocks have also dropped back and declines are visible in London County stocks and in some Home Municipal securities. Colonial inscribed stocks, however, have kept their prices with little variation, and neither the Cape nor the Canadian new issue has done anything to disturb quotations for the securities of those countries. The City, however, is disposed to be cynical about the new loans, which, it has been remarked, show the hard-up state of the Cape and Canadian Treasuries. Had they not been without the means to cover maturing obligations they would hardly have put loans up for subscription just now. This is probably the correct view, but the loans have been taken in a fashion, and the Cape one is even quoted at a small premium, although that colony is very far from being in a position to add to its debt. The Canadian loan has barely gone off, we should judge, and if credit remains dear, as it probably will, both issues must go to a discount, because carried so largely on credit.

Foreign Government Securities.

Trading has been quiet all the week in these securities. Even the demand for Japanese 4½ per cents. has subsided, and Japanese are slightly down on the week. In Russian bonds also less manipulative play has gone on. Prices, however, have been well maintained for them in view of the coming loan, which cannot probably be for less than £50,000,000. Argentine 4 per cents. have receded a little, but the older loans are firm, and no decline has taken place in Continental securities.

Home Railway Stocks.

Home Railway stocks have begun to flag a little, and the movements on the week have not been uniformly upward. Brighton ordinary and deferred, for instance, have both receded 3, and Great Northern deferred alone has risen as much as 2¼. Great Central preferred and deferred, however, are both up, and the Scotch stocks have kept their prices, with now and then a slight improvement. North-Western, too, has been well supported, but North-Eastern stock is feeling the influence of the subsidence of activity in the iron trade. Only a minute business has been done in the de-

benture, guaranteed, and preference stocks, which have kept their prices well. Traffic receipts for the week again indicate slackening off, the increase being only £32,140 for the whole kingdom.

Indian and Colonial Railway Stocks.

Indian Railway stocks continue firm, with few movements, and the changes have been favourable amongst Colonial Railway bonds, but business in that part of the market has again centred almost exclusively in Canadian Pacific shares, which have just about held their ground, with just a little splutter now and then in Grand Trunk things. Mashonaland Railway first mortgage bonds have been put down 2, with nothing going on.

American Railroad Shares.

As we have said, New York has not been able to keep its end up with much effect this week. In spite of bear drives, combinations, corners, and all the rest of it, a majority of prices are lower, Erie shares being prominently flat, and only Milwaukee shares and the shares of the "Soo" Railway closing at a noticeable advance on the week. Pennsylvanias, however, have kept their prices in spite of the reported urgency of further capital demands, and New York Central stock has not flinched at all, although, as pointed out by a correspondent of the *Morning Post*, that company will want £20,000,000 of new money almost immediately. The same correspondent draws attention to the fact that over £160,000,000 in short-term railway notes falls due within the next three years, and will have to be financed somehow, yet the crisis is over, market parrots and half-commission touts keep shouting. Some inquiry continues to be experienced for American Railroad bonds, and a good many of them are higher on the week, although some of the New York Central issues have rather held back. The most prominent decline, however, is in the terminal bonds of the Lehigh Valley of New Jersey Company, which have fallen $5½. Northern Pacific collateral bonds, on the other hand, are $3 higher, and a good many improvements of $1 to $1½ make their appearance on the week's comparison. Business, however, is scattered enough.

Foreign Railways.

A distinct rally has occurred in the higher securities of some of the Argentine lines, notably in Buenos Ayres and Pacific debenture and preference stocks, otherwise the Argentine list has been comparatively little disturbed. Still, Rosario ordinary and deferred are up 3½ and 3 respectively, and Pacific ordinary has risen 3, while the North-Eastern Company's stocks are all 1 higher, and a considerable investment business has gone on. The successful move of the week, however, has been an advance of 15 in Antofagasta deferred, with an increasing amount of business in it. Why it should have gone up nobody seems quite to know, but it was probably unduly depressed, and as there is not much floating stock a moderate demand has a powerful effect on the price. The other stocks of the company have not moved much, but are naturally firmer. Mexican Railway stocks have also been lifted a little, but not enough to encourage the operators for the rise, and Brazilian Railways have just about held previous figures while the securities of the Cuban Railway companies have been dull.

Banks, Breweries, and Docks.

Several shares in our home banks have improved on the week, and no particular recoil has occurred at any point. After the sharp rise of last week Hongkong and Shanghai Bank new shares have gone back 1½, but that meant nothing. National of Mexico shares are also heavy, and the shares of the London Bank of Mexico and South America have receded ½ on the report that the failure announced the other day in Chile involves the bank to the extent of perhaps £25,000. Bank of Australasia shares have been lifted to 99 on some investment buying. In Breweries even one or two of the Allsopp issues have been lifted in spite of the bad report, but the shares in American Brewery securities have been heavy, especially the debentures of the Indianapolis Company, which have lost 1¾, and the few other movements in Home Brewery shares and debentures have been the wrong way, with hardly an exception. There is nothing to say this week about Dock securities.

Commercial and Other Miscellaneous Stocks.

The majority of changes in Commercial and Industrial shares continue unpleasant, although the declines are seldom of much importance. Still, British Westinghouse debentures have been put down 5 to the wide price of 56-60 and General Hydraulic Power stock has relapsed 4. Illustrated London News debenture stock is also down to 58-03, and other minor changes in debenture issues are usually downward. Eastman-Kodak shares, however, are again quoted $10 up, and the market for them is being rigged, for the public demand is not active at all. The securities of Motor companies have again lost ground a little where they have moved. Portland Cement shares are heavy, and very few things have improved in a vigorous way. Electric Construction shares, however, have risen a few minute fractions, and so have "Moss" Empire shares, as also the shares of the Russian and Schibaieff Petroleum Companies. Telegraph Construction shares, too, are better. In the Electric group Canadian General have lost ground a little on the week, as well as the bonds of the Mexican Electric Light Company, and there has been no vigour in any part of the market.

Financial Land, Insurance, Iron, Coal and Steel, and Other Securities.

Hudson's Bay shares have not maintained their price, nor yet those of the Pekin Syndicate and the Peruvian Corporation, but business has been of the poorest in all the Financial Land and Investment group. Financial Trust issues also remain neglected, but the changes of the week are mostly declines. The only incident to note in Gas stocks is the heavy decline in Brighton and Hove "A." Insurance shares have seldom altered, and when they did the move was only a fraction, generally up. The tendency of prices remains adverse in Iron, Coal and Steel securities, in spite of some improvement in Guest, Keen preference and Stewarts and Lloyds ordinary. Dunderland Iron Ore debenture stock was dealt in yesterday at 62, but Shelton Iron debentures have risen 2½. Cargo Fleet shares and debentures have subsided on the report. The Shipping market is still taking a holiday, and very little happened amongst Tea, Coffee and Rubber securities, although Dooars' Tea shares are ⅝ up. Eastern Telegraph stocks more than maintain their price, and most of the changes in this group are favourable, but they are not numerous, and American Telephone stock is 2 down. Nothing calls for remark in any other quarter.

Friday Evening.

Pay-day has slipped by, and nothing has happened. Dejected bulls, indeed, have enjoyed the rare pleasure of receiving differences on many of their accounts, and we hope that will not tempt them to plunge in deeper than ever. If they do, they will rue.

Consols have been heavy, Home Rails grumpish, foreign stocks upheld, American Rails all of a tremble, and Canadian not much better, and Argentine and Mexican Railway stocks alone firm. The Kaffir Circus is as listless as the rest of the Exchange, and all sorts of queer stories are circulating about De Beers. We should like much to know what banks are carrying the buying syndicate's stock of diamonds. And does it really amount to £25,000,000? The £5 Rio Tinto ordinary share closed at 66, and there are still people who think it a thing to "buy on any fall, don't you know."

"Scrip" dividends on Yankee securities are not yet current here, so the Pillsbury-Washburn shareholders will have to wait for their dividend.

Anglo-Sumatra Rubber.—The shares having been considerably over-applied for, the list of applications was closed on Wednesday, 11th inst.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS.—Fall: 2½ p.c. Ann. 1905 ¼, to 80⅞ 81¼ xd, do. Acct. ½, to 81-81½ xd, Irish Ld. Stk. Acct. ½, to 83½ 84 xd, Natl. War Ln. ½, to 97¼-97⅜ xd, Transvaal Govt Acct. ⅜, to 93-93½, Bk. of England 2, to 265 270, India 1931 Acct. ½, to 100½ 101 xd, do. 1948 ½, to 86½-86⅝ xd, do. Acct. ½, to 86½-87 xd, Indian Rupee Paper ½ to 62⅞-63½, do 3½ p.c. ½, to 63-64.

CORPORATION AND COUNTY STOCKS.—Rise Bradford 3½ p.c. 1, to 98 100. **Fall:** Metro. Water "B" Acct. 1, to 89½-90½, Metrop. Cons. Stk ½, to 100-101 xd, L.C.C. 2½ p.c. 1, to 72 74, do. 3 p.c. Acct. ½, to 87½-88½, do 3½ p.c. Acct. ½, to 100 101 xd, Coventry 2⅞ p.c. 2, to 74-76, Stockport 1 to 83-85.

COLONIAL AND PROVINCIAL GOVERNMENT SECURITIES.—Rise: Newfoundland 3½ p.c. 1, to 90 92, Ontario (Prov.), 1, to 92-94. **Fall:** N.S. W., 3½ p.c. 1918 ½, to 97½-98½, do 3 p.c. 1935 ½, to 84-85.

COLONIAL AND FOREIGN CORPORATION STOCKS.—Rise: Melbne. Harb. Tst. Com. 4 p.c. 2, to 100-102, Osaka 1, to 101-103, Rio de Jan. (Fed.) 2, to 83-86, Timaru 1914 and 1916 both 1, to 103 105. **Fall:** Johannesburg Mun. 1, to 84½-85½, Para (Belem.) 2, to 68-71.

FOREIGN STOCKS.—Rise: Argentine 1886-7 ½, to 102-103, do. N Cent. Rly ½, to 98½-99½, do. 1890 Rly. Bds. ½, to 98½-99¼, do. 1887 Treas Conv. 1, to 97-99, do. WATERWORKS.—Fall: Montreal 2, to 90-92.

The *Strand* Christmas number can only be described as a "volume," for it is much too big to be called a mere magazine. The advertisements alone would make that. It starts with a detective story by Jacques Futrelle, which is exciting and baffling as far as it goes; it finishes, or nearly so, with a moral tale for children by clever Mrs. Nesbit, and between these two are fiction various, illustrations plenteous and several articles of informative fact—a most goodly number. The *Grand* also is Christmassy but not exactly cheering in its beginnings, for Miss Cholmondeley chooses as her "best story" a most tragic little episode to give us the blues, and there is nothing specially funny in the other contents to balance matters. The "Voyage of the Moth" and "My Imperial Lunatic" are the gayest, "Riot," the most exciting, and the "Lullaby for a Nervous Child" to be recommended as an excellent soporific! Mr. Tighe Hopkins has written an interesting article on "Crime and the Microscope."

Critical Index to New Investments.

CANADIAN GOVERNMENT FOUR PER CENT. DEBENTURES.

An issue of £1,500,000 4 per cent. debentures is offered by the Canadian Government through the Bank of Montreal, to provide for obligations arising out of construction of public works and the redemption of debt. The debentures are repayable on October 1, 1912, but holders will have the option at any time up to September 30, 1910, of conversion into Dominion of Canada 3 per cent Inscribed Stock, 1938, on the basis of £105 stock for each £100 in debentures. Nominally the price asked is par, but the final instalment of 35 per cent. is not due until February 3, and as a full six months' interest will be paid on April 1, the actual cost to the investor works out at about £1 less.

UNITED LONDON AND SCOTTISH INSURANCE COMPANY, LIMITED.

There has been a recrudescence lately of the formation of fire and general insurance companies to fight the tariff offices, and one and all put forward the same arguments to prove that the present affords a splendid opportunity for the independent undertaking. All are alike, too, in their claims that the insuring public will welcome them with gratitude, and equally they all bait their hook for the investor with examples of the success of the tariff companies which they are established to fight. This new venture is no exception to the rule, and the prospectus bristles with phrases rendered familiar by constant repetition. The capital is £300,000 in £5 shares, of which £1 per share, or £60,000, will be called up, and although the company proposes to have establishments in London, Edinburgh, and Glasgow, and branches in other important centres in the United Kingdom, it is not anticipated that it will be necessary to call up any further part of the capital. With this small capital the directors propose to undertake all classes of business except life and marine insurance, and is even venturing into the unknown ground of employers' liability risks. It is possible that they may make a success of the business, but the shares can only be attractive to the speculatively-minded.

PROVINCIAL TRAMWAYS COMPANY, LIMITED.

This old company, which dates back to 1872, has a capital of £400,000, divided into 10,000 6 per cent. preference and 30,000 ordinary shares of £10 each, of which all the preference and 24,912 ordinary shares have been issued. It works through a number of local undertakings in places so widely apart as Great Grimsby and Plymouth, and has spent so much upon these that its liquid assets have been reduced during recent years to inconveniently small proportions. Further funds are therefore urgently needed, and an issue of £175,000 5 per cent. first debenture stock was this week offered for subscription at par. The stock is secured by a first charge on the undertaking as well as by a first charge on the shares owned in the local companies, and will be repayable at par on November 1, 1927, but it may be redeemed by drawings at 105 per cent. on six months' notice after November 1, 1912. Nett profits during the past five years have steadily increased from £22,216 to £32,567, and as interest on the present issue will require £8,750 there is plenty of margin.

TWEEFONTEIN COLLIERY, LIMITED.

A colliery extending to 2,600 acres in the Middleburg district of the Transvaal colliery, which is now in course of development and equipment, is acquired by this company from the Henderson's Consolidated Corporation, together with the benefit of certain contracts. The purchase price is £47,000, payable as to £37,000 in shares at £1 and £10,000 in cash or shares at 25s. each, but the company repays in addition such portion of the cost of development and equipment as had been expended up to the date of the completion of the purchase, which amounted on September 30 to about £45,000, and also takes over all contracts for plant, &c. Out of a total capital of £125,000 in £1 shares, 15,000 were offered for subscription at 25s. per share, together with £90,000 6 per cent. debenture stock at par. This debenture stock will be redeemable at 105 by 16 annual drawings, commencing January 1, 1913, but may be exchanged at the option of the holder on July 1, 1910, for ordinary shares in the proportion of seven shares for every £10 stock, and 63,000 of the unissued shares will be held in reserve for this purpose. It was underwritten by Henderson's Transvaal Estates, Limited, for a commission of £5,400, or 6 per cent., and half of the amount was allotted firm to that company. Amongst the contracts for the sale of coal acquired, the principal one is with the Central South African Railways Administration for the supply of a minimum of 1,000 tons per month, with probable requirements up to about 16,000 tons per month, for one year from February 1 next. Arrangements have been made for the sale of a further 4,200 tons per month, and it is estimated that the profits from the contracts will be more than sufficient to pay 10 per cent. on the issued capital, after providing for the debenture interest. These are estimates, however, and we fail to see how the figures can justify the imposition of a premium of 25 per cent. on the shares.

Company Reports and Balance Sheets.

*** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* INVESTORS' REVIEW, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

GREAT INDIAN PENINSULA RAILWAY.

A further very substantial increase of Rs. 42,08,014 to Rs. 4,01,04,396 in gross receipts was obtained by this important undertaking during the six months ended June 30, while the expenditure was only Rs. 16,90,452 up at Rs. 1,82,07,340, leaving the nett income Rs. 25,17,561 better at Rs. 2,18,97,047. The steady improvement in passenger traffic, which has been so noticeable of recent years, made still greater progress, and the number of third class passengers carried by ordinary trains was the largest recorded since the amalgamation. First and second class passengers also showed small increases, and although third-class passengers by mail trains fell off in numbers, the receipts from that source were larger, and the total receipts from coaching traffic, including season tickets, and troops and police carried, were Rs. 8,28,145 up at Rs. 89,30,104. Part of the improvement was no doubt due to exceptional causes like the visit of H.M. the Amir of Afghanistan, the extra bookings to and from various fairs in the vicinity of the line, and of return pilgrims from Mecca, but the unusual prosperity, especially amongst the agricultural classes, contributed very largely to the favourable results shown. This prosperity was shown in an even more marked degree by the traffic in public merchandise, which was 288,732 tons greater in weight, and yielded an additional Rs. 32,27,083 in revenue. The most important increase was Rs. 7,79,454 in raw cotton, due not so much to a better crop as to the stronger export demand caused by the deficiency in the American crop and the great activity of the textile trade throughout the United Kingdom and Europe. Coal and coke gave Rs. 2,05,611 more, owing to heavier consignments of Bengal coal from the East Indian Railway under the stimulus of the reduced rates recently introduced, while wheat produced Rs. 4,02,790 more owing to a larger crop and the greater inquiry for Indian wheat caused by the poor harvests in America and Russia. Other important gains were contributed by jawari and bajra, linseed, rape and mustard, til or jingli, cotton seed, salt and unrefined sugar, but against these refined sugar gave Rs. 1,37,956 less, and there were also fairly substantial decreases in hay, straw and grass, railway plant and rolling stock, wood and miscellaneous goods. Revenue stores increased by Rs. 1,20,170, and live stock by Rs. 37,483, but the company's own materials for construction were smaller, and with a slight falling off in sundry receipts and telegraphs the improvement in gross income was brought out as above stated. In expenditure locomotive expenses increased by Rs. 14,36,072, partly owing to increased train mileage and partly to extra cost of renewals of engines of a heavier type, together with more extensive repairs, and traffic expenses were naturally larger, while special and miscellaneous expenses were enhanced by extra payments for compensation claims and hire and demurrage of foreign stock. On the other hand, maintenance of way and works cost less, partly because the comparison is made with a period during which 20 miles of track were relaid and partly because a larger sum was credited for materials released in the half-year under review. For the whole year the gross revenue showed a gain of Rs. 38,85,870, of which Rs. 20,57,148 was retained in the nett income, making the total available Rs. 3,25,51,137. Of this Rs. 2,00,00,000 was paid to the Secretary of State under the contract, and sundry interest charges took Rs. 14,80,009, leaving a surplus of Rs. 1,10,71,131. The company's one-twentieth share amounted to Rs. 5,53,256 or Rs. 52,788 more than for the previous year, and converted into sterling gave £36,240 compared with £30,713. With £310 brought in, the disposable balance was £4,022 larger at £36,550, and the directors are therefore able to pay a dividend [illegible] £1 8s. per cent.

against £1 4s., in addition to the guaranteed interest for the half-year, leaving £196 to be carried forward. Capital expenditure for the six months was Rs. 64,41,819, of which Rs. 12,87,829 was on the Bombay Harbour branch railway, Rs. 9,62,650 on additional coaching and goods stock, and Rs. 13,12,746 on land, principally in Bombay. Good progress is being made with the doubling of the line, and also with the Bombay Harbour branch, the principal section of which, it is expected, will be ready for goods traffic early next year. Of the additional £1,000,000 set apart by Mr. Morley for the purchase of rolling stock, this company is to receive 800 wagons as its share, but its proportion of the other £1,000,000 granted for capital expenditure on Indian railways during the present fiscal year was only £90,000. This sum was far from sufficient to meet the company's requirements, and the Secretary of State has made a proposal to vary the company's contract of 1900 with a view to giving it power to raise, under his sanction and guarantee, whatever additional capital may be required for the development of the undertaking.

Indian Midland Railway Co., Limited.

Although this company was amalgamated with the Great Indian Peninsula Railway in 1900, it still continues to issue separate accounts. In the six months ended June 30 the gross earnings amounted to Rs. 80,72,084 or an increase of Rs. 15,93,953 over those of the corresponding half of last year, which in turn were Rs. 15,43,108 in excess of 1905. Of this advance coaching traffic contributed Rs. 2,29,922, chiefly from third-class passengers, and goods traffic Rs. 14,11,032, of which Rs. 12,90,201 was in public merchandise. An interesting comparison is given with the results for the first half of 1900, which have hitherto been the highest obtained by the company, and from this we find that gross and nett earnings of the period under review exceeded the earlier returns by Rs. 14,20,767 and Rs. 3,46,414 respectively. Working expenses of the combined undertaking are divided between the Great Indian Peninsula, and this company in proportion to their respective gross earnings, and it is therefore unnecessary to enter into details again here.

Bengal-Nagpur Railway Co., Limited.

This company enjoyed a fair share of the prosperity attending the Indian railways in the six months ended June 30, and its gross revenue improved by Rs. 13,31,875 to Rs. 1,58,85,354. Working expenses, however, took Rs. 8,41,027 more at Rs. 70,51,773, the ratio to receipts being £44.39 per cent. compared with 42.68 per cent. a year ago, and nett earnings were consequently Rs. 4,90,848 up at Rs. 88,33,581. Of the increase in receipts only Rs. 98,701 came from coaching traffic as the result of 774,353 more passengers carried, but goods traffic rose by 28,785 tons in weight and Rs. 9,25,912 in amount. The largest increase was Rs. 5,90,581 in rice, but wheat and wheat flour gave Rs. 3,33,505 more, and there were also fairly good gains in oil seeds, salt and manganese ore, while, on the other hand, there were large decreases in coal, grain, and pulse, myrabolams, and railway materials. Under the contract with the Secretary of State, surplus profits depend on the nett earnings for a whole year ending December 31 exceeding the interest for the same period, but the directors, as usual, give a statement showing that the nett earnings for the half-year under review came to Rs. 34,02,930 more than the fixed charges compared with an excess of Rs. 32,45,555 for the first half of 1906. During the six months 3½ per cent. debentures for £390,700 and 3¼ per cent. debentures for £448,900 were renewed for four years at 3¾ per cent. Capital expenditure amounted to £546,952, and stores and other amounts in suspense were £677,816, making the outlay to date £20,568,371. Against this the Secretary of State advanced £271,956 under the contract relating to extensions, and also provided £662,169, bringing the total capital raised up to £20,571,593.

Burma Railways Co., Limited.

During the twelve months ended June 30 this company spent £298,482 on new rolling stock, doubling parts of the railway, providing steamer and flats for the Henzada ferry, and other works. Against this the company received Rs. 1,61,881 as a permanent contribution from the Government, together with Rs. 51,23,850 in the form of advances, but funds are badly needed. The directors therefore ask that the additional borrowing powers conferred on them should be extended from £1,000,000 to £2,000,000, and that the rate of interest, instead of being fixed at 3 per cent., should be left to their discretion. With regard to the results for the past year, the plague exercised a very adverse effect on the coaching traffic during the latter part, and the gain in revenue from this source amounted to no more than Rs. 55,537 at Rs. 70,75,643. Goods earnings, however, rose by Rs. 575,321 to Rs. 89,31,923, mainly due to paddy and rice, of which the company carried some 80,000 tons more. Fresh fruits and vegetables, grain and pulse and earth-nuts likewise showed satisfactory improvements, and the only important decrease was in timber. With a small gain in miscellaneous receipts, the gross revenue came to Rs. 674,240 more at Rs. 1,63,32,746, but working expenses increased by Rs. 632,195 to Rs. 1,02,68,293 in consequence of the renewal of light section rails in the main line and other works and of the inclusion of a considerable sum on account of renewals of rolling stock, which the directors say will in future be a constant charge. The gain in nett earnings was therefore no more than Rs. 42,045 at Rs. 60,64,453, and of this the company's share was Rs. 5,26,484 compared with Rs. 5,51,281 a year ago. Including sundry small items, the available total was Rs. 5,27,384, of which Rs. 5,27,000 was sent home, realising £35,133. Balance in hand was £23,322, making a total of £58,455 to be dealt with against £60,028, and the directors again declare a dividend of £1 18s. per cent. in addition to the 2½ per cent. guaranteed, leaving £20,455 to be carried forward.

Buenos Ayres, Ensenada, and South Coast Railway Co., Limited.

The report for the year ended June 30 is interesting, because of the statement that for the first time the nett earnings have been sufficient to meet the full interest on the first mortgage 4 per cent. debenture stock. Gross receipts showed an increase of £7,264 at £24,690, owing mainly to the transport of about 163,000 tons of conchilla ballast from Magdalena for use in the Great Southern Railway and the La Plata Port lines. This, the directors point out, cannot be regarded as a permanent source of revenue, but it is of great assistance at present, and in the meantime business generally is improving. Passenger traffic contributed £698 of the increase in earnings, and parcels, which include dairy farming produce, rose by £316, but live stock receipts were only £96 up, a smaller number of sheep having been carried owing to flocks having been previously reduced to meet the requirements of the refrigerating companies. The line is worked by the Great Southern for 60 per cent. of the gross receipts, but a rebate of 10 per cent. is allowed by it on through traffic, and the nett revenue, including £508 or £105 more from this source, was £3,011 larger at £10,384, of which from transfer fees, the total available was £10,388, of which interest on the first mortgage debenture stock took £8,000, but interest on the "B" debenture stock and Atalaya extension debentures required £10,224, and interest on capital loan £402, so that the debit balance was increased from £144,098 to £152,136.

Commercial Bank of Scotland.

Gross profits fell off in this bank's year ended October 31 last by £6,573 to a total of £233,401, but £26,410 or over £5,000 more was brought forward, and therefore the divisible total of £259,902 is merely £1,508 down. The directors accordingly pay away £200,000 in a 20 per cent. dividend to shareholders, the second half of which will be disbursed in January next, but they have no money to spare for the officers' pension reserve fund and only £25,000 is set aside as provision against depreciation in investments compared with £30,000 last year. Once more, however, £5,000 is applied from the year's profit in reduction of cost of bank premises, and these accordingly now stand in the balance-sheet at a mere £2,000 more than they did a year ago, the total being £522,000 of which £100,000 is represented by London property and £248,134 by the other offices of the bank. Nothing is ever added now to the reserve or "rest." On the contrary, £100,000 placed to its credit in 1895, chiefly from profits on investments sold, is now to be withdrawn and, together with the £25,000 taken from last year's profits, employed in reducing the value of the Consols held from 85 to 80 in the books of the bank, and of its other investments "considerably under present market prices." This is a wise and commendable step, but the entry "British Government securities" alone shows traces of this operation in the balance-sheet. The total of such stocks held is, at £1,112,853, about £70,000 below that of the previous year. On the other hand, the entry "Indian and Colonial Government stocks," &c., &c., has gone up £86,000 on the year to £2,015,902, so that the nett result of the writing down is an increase in the book value of the investments held. From this we are to infer that the bank has been buying stocks in the interval. In other respects the changes in the accounts as presented are not suggestive of much one way or another. The note circulation of £1,008,093 is only £133 higher than at the end of October, 1906, but deposits are higher by £553,000 at £15,032,000, and the reserve is now £900,000. Specie, &c., &c.—the usual entry embracing many things besides cash—at £974,675 is £66,244 higher, and money at call and short notice in London has risen £312,000 to £3,498,876, while "short loans on securities" are £109,284 down at £1,928,950. Advances again are up £166,446 to £4,388,123 and bills discounted are £16,628 up at £3,112,538, a most respectable total in a balance-sheet which adds up to £18,744,169. We hope the large sum out of this lent on the London market is reasonably within reach.

African Banking Corporation.

The figures of this considerable African bank puzzle us a little for the past half-year ended September 30. Profits have been larger, amounting to £102,522 gross, including £8,964 brought forward, this being an increase of £11,000 on the same half of last-year, and after allowing £1,138 for depreciation on furniture, or £217 more, and giving the staff guarantee and savings fund another £2,000, the directors are able again to pay a dividend at the rate of 6 per cent. per annum for the half-year, with £9,795 left to carry forward or £831 more. Expenses came to £67,207 or £1,632 less, but rebate, on the other hand, to £1,313 more at £10,382. All this is clear enough, but what puzzles the student is, how such excellent profits could have been made with diminishing resources. The total of the balance-sheet is now only £5,157,003, which is nearly £801,000 less than it was at this time last year, and some of the most profitable-looking sources of income would seem to have been curtailed. Deposits, for instance, are down about £162,000 to £4,055,688. Another severe decrease of £75,591 has also taken place in the note circulation compared with the September half of last year, and the total is now only £241,493, this being a decrease upon a decrease. Drafts, acceptances, endorsements, and bills rediscounted also show a decrease of £166,531 at £287,645. Assets naturally enough show a corresponding decline, the total of coin, bullion and notes held, and of cash at bankers and at

call and short notice, being £141,571 lower at £1,211,357. Investments are also £2,407 down at £402,934, although no mention is made of any writing down to meet market depreciation. Bills of exchange purchased are also £175,294 less at £849,897, and bills discounted, loans and advances show a decrease of £481,462 at £2,472,224. In fact, except the item bank premises, furniture, &c., which is £2,566 up at £153,449, it may be said that the whole balance-sheet shows a diminution in the value of the assets or in the volume of business done. Possibly the higher rates of interest ruling and the absence of bad debts may account for the larger profits otherwise not to be explained.

National Bank of Australasia.

In its half-year ended September 30 last this large Australian bank earned gross £8,989 more than in the corresponding half of the previous year, the total being now £118,427. Working charges rose by £3,789 to £64,429, and the note and income taxes took £239 more at £4,054. This left an increase of £6,172 in the nett income, which was £57,303, including £7,360 brought forward. Out of this £10,000 has been added to the reserve fund making it £160,000 against a paid-up capital of £1,498,220, and the ordinary shares get a dividend at the rate of 5 per cent. This and the preference dividend met leave £9,848 to carry forward. The balance-sheet shows an increase of £543,000 in the aggregate on the twelve months' comparison, the total being now £10,312,217. Notes in circulation have gone up nearly £20,000 to £256,810 and bills in circulation are £21,646 higher at £687,906. Government deposits are down £148,202 to £453,253, but other deposits show an increase of £538,000 at £7,013,917. On the assets side of the account the most conspicuous change is an increase of £1,070,000 in bills discounted and other advances, which now stand at £6,956,300. Real estate in the shape of bank premises stands at £445,963, rather a large figure, and other real estate held by the bank figures for £92,637. Coin, bullion and cash at bankers show a handsome total of £1,654,673. Government, municipal and other public stocks amount to £598,441 and bills and remittances in transitu are set down at £501,294, these being the principal assets tabulated in the balance-sheet.

Western Australian Bank.

The half-year ended September 30 was a more prosperous one for this bank than the corresponding period in either of the two preceding years, and nett profits, after providing for all charges were £3,934 up at £27,993. A much smaller balance, however, was brought forward, so that the available total was actually £2,249 smaller at £51,318, but the dividend is maintained at 20 per cent. per annum, and another £25,000 is put to reserve, leaving £11,318 or £2,249 less to be carried to the new accounts. With this addition the reserve is brought up to £400,000 against a paid-up capital of £150,000, figures which illustrate very clearly the prudence and care with which the bank is conducted. Liabilities on deposits have only increased by £33,518 to £2,062,245, those bearing interest being £42,589 higher at £910,030, and non-interest bearing deposits £9,071 down at £1,152,162. Notes and bills in circulation have risen by £59,413 to £204,015 and balances due to other banks now amount to £244,203 compared with £81,207 a year ago. On the other side of the balance-sheet specie and bullion in hand has gone up by £81,731 to £1,019,833, or nearly 45½ per cent. of the deposits, and bills receivable and all other advances come to £144,146 more at £1,796,886. The directors are of opinion that more capital is necessary, and propose to ask the shareholders to authorise a further issue of shares.

Imperial Bank of Persia.

However disturbed the dominions of the Shah may be politically, and they have been rather squabbly of late, this bank is undoubtedly making way, and must have considerable influence upon the well-being of the people. It is doing much better indeed than we should have expected, and gross profits for the year ended September 30 last came to £130,866 or £11,395 more than in the previous year, which also showed progress, so that compared with two years ago it is about £21,000 higher. Charges have gone up by only £2,807 to £52,159, and it follows that a larger free balance is available in spite of the slight increase in the amount paid to the Persian Government in terms of the concession, which was £5,452. Income-tax is also rather higher at £3,156, but even so the free balance, after adding in £10,953 brought forward, is £78,215, out of which £25,000 is added to the reserve as against £20,000 in the previous year. A final dividend of 5s. per share is then to be paid, making with the interim payment of 3s. 8d. per share for the year. The officers' provident fund gets only £1,000, and these distributions leave £12,215 to be carried forward or £1,262 more than was brought in. The total of the reserve is now £175,000 against a paid-up capital of £650,000. Deposits do not figure largely in this company's balance-sheet, but the total of £549,048 is £21,588 higher. The note circulation, however, is down £65,899, and seems to be rushing towards extinction, for compared with two years ago the decrease is £131,067, so that the total now shown is only £395,012. Amongst the assets we find a decrease of £67,413 in the cash items of all sorts, now standing at £387,093, including £20,000 only lent on call and short notice in the London market. Investments in British and Colonial Government and other securities figure at £411,288, and the mixed item of bills discounted, loan and advances, including temporary advances to the Persian Government in excess of the amount authorised by the concession, have risen by £102,466 to £1,167,040. Bills receivable are also up £73,424 at £180,084, the total of the balance-sheet being now £2,180,027.

Argentine Southern Land Co., Limited.

During the year ended June 30 this company disposed of a further considerable portion of its land to the Rio Negro Argentine Land Company, on which it realised a profit of £70,026, or £43,962 more than the gain from this source in the previous twelve months. The ordinary revenue did not increase quite so rapidly as it did a year ago, but was still good, with an increase of £49,161 at £122,287. Expenses, however, owing in great measure to exceptional outlay, were heavier, and the net balance was only £43,710 up at £68,654. Adding £13,814 brought on, the available total was £112,468 compared with £68,813, and of this the directors transfer £20,000 or £5,000 less to reserve and set aside £42,000 to provide for a bonus of 10 per cent. per annum for the next three years, in addition to any dividend which may be declared. Out of the balance remaining the ordinary dividend is repeated at the rate of 10 per cent., to which it was raised a year ago, and a bonus of 20 per cent. against land sales paid on account of land sales, leaving a considerably smaller balance of £8,468 to be carried forward. Estancia lands owned now total no more than 655,040 acres, but stocks of cattle, sheep, and horses are larger, and this item in the balance-sheet is £5,203 up at £179,472, against which the reserve amounts to £62,500. Sundry creditors, although higher, are still moderate enough at £13,145, and on the other hand debtors have risen by £6,184 to £111,441, and cash comes to £25,093 or £21,955 more, but stores and produce on hand show a small decrease of £1,350 at £12,666 and investments valued at £3,138 a year ago have now disappeared.

South Australian Land, Mortgage and Agency Co., Limited.

The results obtained from this company's property in the year ended June 30 again showed a decided improvement, and the directors are able to gladden the hearts of the shareholders by the announcement that they are resuming the payment of dividends after an interval of 16 years. Satisfactory sales of fat cattle were made at full prices, and as the company also derived considerable benefit from the rise in wool values the balance of revenue from the estates was £12,073 larger at £42,039, this advance following one of £11,102. Interest and commissions, &c., yielded £1,520, making a total income of £43,559 compared with £30,956, and after meeting all charges, writing off £593 for depreciation of investments, and deducting the debit balance of £1,637 brought forward, £24,599 or £10,457 more was left. Out of this the directors declare a dividend of 5 per cent. and a bonus of 2½ per cent., absorbing £10,433 and leaving £14,166 to be carried forward. It is to be hoped that the directors in taking this step will not prove to have been too rash, but they have a big task before them to provide for debentures maturing at an early date. During the twelve months £25,111 was paid off, but another £61,765 falls due within the next three years, of which £13,800 has been paid off since the end of the financial year, and £160,050 will mature on April 1, 1910, while the amount due to shareholders on July 28, 1900, has risen by £9,304 to £29,424. Pastoral properties in hand have been increased by £8,100 to £260,550, but town, suburban and other properties show a decrease of £1,003 at £115,539, making a nett increase in this item of £7,097 at £376,089, against which the reserve, consisting of surplus from properties realised comes to no more than £4,176. Loans on mortgage are £2,202 down at £8,531, a movement which may in part account for the rise in properties held, and other assets, including £13,103 of investments in Colonial Government securities at their market value, show a drop of £1,804 at £40,438.

Provincial Tramways Co., Limited.

Last year there did not appear to be justification for the increase in the dividend, considering the meagre liquid resources of the company, and this year, with an increased debt account and actually less cash, the dividend is again raised ¼ per cent. The progress of the undertakings, it is true, shows steady improvement. The gross receipts from tramways for the year are £7,050 higher at £48,049. Nett revenue £32,568 compares with £24,800 in 1906, and £29,800 in 1900, the best previous year. This year £10,000 is set aside for depreciation, against £2,000 last year and £3,000 is reserved for expenses of the contemplated debenture issue, while 4 per cent. is paid on the ordinary capital. Interest has absorbed £2,530 more at £9,415. The company is now in debt to the extent of £147,380, of which £119,000 is secured by deposits of debentures. Owing to more difficult financial conditions the directors have cancelled the proposed issue of 4½ per cent. debentures and are arranging for the issue of £175,000 debenture stock carrying 5 per cent. interest. Local companies' balances are £20,000 higher at £41,585, and cash is only £5,269, less than last year's amount by £630. Property account is £545,570. Besides cash, Consols deposited with Paymaster-General costing £1,502 are the only liquid asset, so that financing must be carried on with considerable difficulty on so narrow a margin. The debenture issue will relieve this to some extent.

W. Butler and Co., Limited.

An improvement of £7,738 to £77,070 in profits was realised by this Wolverhampton brewery for the twelve months ended September 30, but the ordinary shareholders have still to go without a dividend as the directors are employing practically every penny they can get to improve the financial position. Accordingly, in addition to providing £20,218, or about £2,000 more for repairs and depreciation in the ordinary way, they appropriate £7,505 in writing down to value as unlicensed the houses whose licences have been taken away under the Compensation Act and £4,000 in reducing the item of goodwill. Debenture interest absorbed £14,500, other interest £1,508 and

preference dividend £18,000, and after meeting these charges £1,371 is carried forward against £941 brought in. Freehold and leasehold properties stand in the balance-sheet at £975,338, or a decrease of £2,967 and plant, &c., is £5,856 down at £61,060, but goodwill, through the acquisition of new businesses, is £900 up at £13,900, these, however, being the figures before making the adjustments now proposed. On the other hand, loans on mortgages and other securities have been reduced by £12,180 to £183,940, and reserves of various kinds remain at £100,363. Floating liabilities are £10,910 down at £37,478, but are still very much in excess of sundry debtors and loans amounting to £21,402, while stocks are £1,358 lower at £70,788 and cash has dropped by £7,893 to £4,807.

Warwicks and Richardsons, Limited.

Profits on brewing for the twelve months ended September 30 fell off by £349 to £36,720 and rents also yielded rather less at £6,662, but the decrease in these items was more than made good by interest receipts, which rose by £573 to £2,309. The total revenue was therefore £128 up at £45,692, but outgoings, including £1,359 for compensation fund, took an extra £398, and after putting another £2,500 to reserve the surplus was £270 down at £31,614. Adding £2,401 or £291 more brought forward, the disposable balance was £34,015, out of which the dividend of 8 per cent. paid a year ago is repeated and the sum carried out is increased to £2,582. Expenditure on capital account was £5,367 raising the total to £514,327, and to provide for this mortgages and trade investments have been reduced by £1,927 to £42,303 and the additions to reserve and pension funds amounting to £2,536 at £48,436 have also been employed. Loans on mortgages are £510 up at £75,732, but money held on deposit shows a reduction of £1,173 at £19,101. Floating liabilities come to £10,200 against £34,094 due from sundry debtors and stocks have risen by £2,942 to £46,636, but cash has dropped from £37,198 to £33,816.

Wenlock Brewery Co., Limited.

The directors of this company "think it right to remind the shareholders that the profits continue to be adversely affected by the War tax excess duty on beer, sugar duty and the compensation fund charge," which they say cost the company upwards of £8,000 during the year ended October 31. As, however, similar conditions prevailed in the previous year, it is hard to believe that by this they mean to suggest that the charges were responsible for the decrease of £3,507 to £66,346 shown in the trading profits, yet no other explanation is put forward. Rents, interest on loans, &c., gave £4,145 less at £20,880, a small part of the reduction being due to a change in the accounts, whereby doubtful interest is deducted from this item, instead of being included in the provision for bad debts. The total income from all sources was £7,652 down at £87,226, but £2,025 was saved in expenses, and after meeting interest and other charges and writing off an extra £552 at £9,799 for depreciation, the nett profits came to £23,927 against £30,414. Adding £1,618 brought forward the disposable balance was £6,970 smaller at £25,545, and as the directors again write £3,000 off properties and loans, the dividend on the ordinary shares has to be cut down from 10 per cent. to 7, and even then the sum carried out is £970 less at £1,045. Freehold property, plant and goodwill shows a decrease of £1,883 at £213,022, and properties and loans and interest—an item which might be split up with advantage—have been reduced by £7,659 to £595,178, and against these the reserve remains at the old figure of £130,000. Loans and deposits, although £1,821 lower, are still fairly heavy at £53,397, but sundry creditors have dropped by £2,252 to £12,249, while, on the other hand, book debts are virtually unchanged at £16,805, stocks are £693 down at £15,218 and cash amounts to £21,667 or £351 less.

Wolverhampton and Dudley Breweries, Limited.

As usual, the directors of this company allow the figures they submit to tell their own story, and are careful to say nothing about the business one way or the other. Trading profits for the twelve months ended September 30 fell off by £1,503 to £40,646, but rents gave a trifle more at £9,268, and after providing for all charges and writing off £5,983 for depreciation and £781 for bad debts, the nett profits were £1,783 lower at £38,556. Balance brought forward, too, was considerably smaller at £1,012, making with £9 from transfer fees a nett surplus of £22,496 compared with £29,387, but the directors having increased the dividend to 12½ per cent. a year ago are determined not to go back, although a distribution at that rate involves a serious reduction in the appropriation for reserve. The sum set aside is cut down to an even greater extent than is absolutely necessary, only £5,000 being added against £14,000, so that after putting the usual £500 to superannuation fund, £2,109 more at £3,121 is carried to the new account. Additions to freehold and leasehold properties cost £20,756, against which £2,076 was deducted for compensation received and £1,943 was written off, leaving the item £16,737 up at £432,229. The "new" brewery, which is now only new by comparison, stands at the old figure of £26,858, but plant, &c., is £3,209 down on balance at £15,899, making a total altogether of £474,986, against which the reserves will now reach £105,000. Mortgages and loans have been increased by £1,734 to £41,765, and sundry creditors, including £1,665 due for property bought, are £2,237 up at £15,633, while debtors owe £1,018 less at £12,154, stocks are £815 lower at £26,747 and cash has dwindled from £2,135 to £805, apart from £745 in the hands of the debenture trustees.

P. Phipps and Co., Limited.

This is another of the provincial breweries the directors of which tell their shareholders nothing, but in its case the twelve months ended September 30 proved even more favourable than the preceding year, and gross profits rose by £13,361 to £179,716. Rents produced £26,635 and interest and other receipts £1,866, and after meeting all charges, including £21,151 for repairs, the nett surplus showed a gain of £5,693 at £77,174. With £16,216 brought forward, the available total was £6,132 up at £93,390, and after putting £10,000 or £5,000 more to reserve and a similar sum to breweries depreciation account, giving the managing directors £2,000 and paying preference dividends, there was still £62,640 to be dealt with. Out of this a dividend of 10 per cent. or the same as a year ago is again paid, but this time a bonus of 1s. per share is added, leaving £3,397 less at £12,818 to be carried forward. Freeholds, leaseholds, goods in houses and goodwill, after deducting the amounts now written off will show a decrease of £6,632 at £1,264,224, so that additions to property cannot have been important, while plant, &c., is £1,688 down at £69,316. Mortgages and loans have been reduced by £19,615 to £140,671 and sundry creditors and rents are £3,771 lower at £23,809, but, on the other hand stocks are £8,075 smaller at £67,485 and rents, book debts, &c., have declined by £1,929 to £42,546, but cash has risen by £1,651 to £33,570 exclusive of £1,866 in the debenture trustees' hands.

Leeds and Wakefield Breweries, Limited.

Business was not quite so good with this company during the twelve months ended September 30, and the total income, including rents and transfer fees, showed a decrease of £1,277 at £25,818, but the directors disdain to make use of the stock excuses for the falling off, and have apparently no others to put forward in their place. Of the above total £4,641 is written off for repairs, £800 for depreciation of plant, and £481 for bad debts, and after providing for administration expenses and contribution to the compensation fund the nett balance was £16,214 or a drop of £802 only. Debenture and other interest took rather less at £7,882, and £790 more at £1,033 was brought in, so that the disposable total was actually £82 up at £9,364, but the dividend on the ordinary shares is nevertheless reduced by 1 per cent. to 4 and £831 is added to the sum carried out, raising it to £1,864. Additions to property were small, and in addition to the provision for depreciation £1,475 was deducted for compensation received for licenses not renewed, so that the capital account less the depreciation reserve is £1,684 down at £365,745. On the other hand, nothing has been added to reserve, which remains at £46,500 or nearly 13 per cent., and even this is all in the business. A reduction of £824 to £44,415 in mortgages and loans is offset by an increase of £1,006 to £5,813 in sundry creditors, against which sundry debtors and loans, after deducting £4,011 or £511 more for doubtful debts and discounts, come to £16,257. Stocks are a trifle up at £10,037 and £6,127 is held in cash, apart from £1,600 in the hands of the trustees for debenture-holders.

Northampton Brewery Co., Limited.

The gross revenue from all sources for the year ended September 30 showed an improvement of £1,486 at £99,639, but expenses, including £12,760 written off for repairs and depreciation and £1,242 for bad debts, rose by £836 to £60,559, leaving the nett profits £650 up at £39,080. Adding £10,482 brought in, the disposable total was £49,562 against £48,784, and after providing £1,787 for compensation fund and repeating last year's dividend of 9 per cent. on the ordinary shares £4,000 or £1,000 more is put to general contingency fund and £10,250 is carried forward. During the twelve months the nett addition to capital account for new properties bought was £8,220 making a total of £615,460, but plant, machinery, &c., showed a trifling reduction at £38,099 and against these the reserve and contingency funds will now amount to £60,000—none of which, however, is invested outside the business—and mortgages, loans and deposits are £2,340 up at £76,447. Sundry creditors are slightly higher at £22,602, while debtors have been reduced by £750 to £33,020, stocks have dropped £1,339 to £37,027, and cash and bills come to £11,535.

Arnold, Perrett and Co., Limited.

This Bristol brewery found its sales in the cask beer and mineral water departments affected by the poor summer, and although the sales of wines, spirits and bottled beer were better, gross profits for the year ended September 30 fell off by £420 to £55,337. Rents gave a few pounds more at £8,152, but expenses were heavier, and after writing off an extra £167 at £9,808 for depreciation the nett revenue came to £28,819 compared with £29,581. To this was added £935 or £451 more brought forward making £29,764 against £30,079, of which debenture interest and preference dividend took £25,111, so the ordinary shares have again to be content with a meagre 2 per cent., or leaving £654 to be carried to the new account. Reductions of £1,550 to £577,936 in freehold land and buildings and £300 to £4,655 in leasehold properties are counterbalanced by an increase of £1,325 to £85,309 in plant, rolling stock, &c., leaving a nett decrease in capital outlay of £525 at £607,900, and against this the reserve stands at the totally inadequate figure of £6,000, no addition having been made to it for some years. As the capital is only £400,000 it follows that the company has had to depend to a large extent on credit, and in addition to raising £251,000 on first mortgage debenture stock £48,455 has been obtained on mortgages and loans. Trading balances are moderately favourable, £13,906 being due to creditors against £19,112 owing by sundry debtors and £1,350 out on loan, while stocks are £1,361 larger at £29,260, but cash

has dropped by £7,031 to £10,793, apart from £3,804 in the hands of the debenture trustees.

REDRUTH BREWERY CO., LIMITED.

Sales for the twelve months ended September 30 showed an increase over those of the previous year, and the gross profits, including rents, &c., were £1,417 up at £36,390. Expenses rose at a still more rapid rate, and as the balance of £49 brought forward was decidedly smaller the disposable surplus was only £8,432 compared with £8,605. The directors, however, seem to have set their hearts on paying an extra 1 per cent. dividend at 7 per cent., so they write off £1,500 for depreciation against £2,500, and after putting another £2,000 to reserve carry forward £202 or £152 more. Property and goodwill will now stand in the balance-sheet at £94,000 and plant, &c., at £12,080 against which the reserve will be £16,000, all in the business. Trade creditors are down by £6,961 to £12,151 and are just about balanced by £12,221 due from sundry debtors, while stocks are valued at £16,049 and cash is £4,428 larger at £13,551, thanks, apparently, to borrowing, as loans and mortgages amount to £16,068.

KENWARD AND COURT, LIMITED.

This small brewery business earned a gross profit of £17,929 during the year to September 30 and rents and transfer fees gave £1,570 or an aggregate of £19,499. Outgo of all kinds took £11,186, leaving £8,313 nett and £257 was credited from previous account. After meeting interest at 5 per cent. or £50,000 debenture stock the directors provide dividends aggregating 5½ per cent. on the share capital and the carry forward is increased to £570. Reserve receives no addition and remains at £7,000, whereas the property account has been increased from £152,490 to £154,220, depreciation allowance being absurdly small. Loans with interest come to £8,083, and trade liabilities and rents payable to £2,440, while the book debts, rents, and loans receivable have an "estimated value" of £6,505. Stock is £3,980, and the cash balance £573, with £3,000 to be provided for final dividend, not exactly an impregnable position.

ST. LOUIS BREWERIES, LIMITED.

In spite of an improvement of no less than 42,483 barrels to 741,570 barrels in the year ended September 30, the American company's trading profits of £230,905 were only £5,726 larger than in the preceding twelve months, when additional sales of 9,993 barrels produced nearly as large an increase. Yet, on the average, the cost of materials was admittedly very slightly in excess of that ruling in 1905-6, and some other explanation of the disproportionate gain in revenue seems to be required. Interest, &c., gave an extra £726 at £5,676, bringing the total up to £236,581, out of which £44,153 or £1,827 more was spent on repairs, but the depreciation allowance was cut down by £1,075 to £19,186, and interest paid took £555 less at £60,007. Adding £20,071 brought forward, the disposable balance was £6,134 larger at £133,306, so the directors increase the amount distributed in dividends from £107,101 to £104,938, and carry forward the smaller balance of £18,368. The English company's share of the dividends paid amounted to £114,906 against £107,072, and with £1,194 more at £10,620 brought forward and interest and transfer fees the available balance was £9,170 better at £113,290. Arrears of preference dividend only amounted to 3½ per cent. at the beginning of the year, and the company is not only able to clear these off to date, but to give the ordinary shares a small return of 1 per cent. and increase the amount carried out to £10,790.

CHICAGO BREWERIES, LIMITED.

While the directors of the St. Louis Breweries set out a profit and loss account of the American undertaking, those in charge of this company do not believe in telling too much, and give as few crumbs of information as they possibly can. Sales of the two breweries during the year ended November 30 rose by a trifle of 1,782 barrels to 241,503 barrels, but the profits realised were apparently smaller, as after charging £20,891 compared with £32,000 for repairs and depreciation and writing off £1,700 less at £6,779 for bad debts, the amount paid over to the English company was £4,207 down at £39,509. Interest on loans also yielded less at £3,699 and with £78 from profit on exchange and transfer fees the total income was £43,280 against £47,792. Administration expenses were a little heavier at £3,942, but debenture interest and redemption fund allowance was reduced by £531 to £17,027, leaving the nett balance £4,386 smaller at £20,966. A year ago the directors put £16,000 to reserve, so that they had only £4,574 to bring forward, and the disposable surplus consequently showed a decrease of £15,935 at £25,520, but the reserve is ignored this time, and it is therefore possible to repeat the dividend of 5½ per cent. and to add a few pounds to the amount carried forward at £4,039. During the year another £2,300 debentures were purchased and cancelled, leaving £274,200 outstanding, and it is no doubt due to this operation that cash balances are £2,047 lower at £22,021. Other changes in the balance-sheet are too unimportant to be worth noting in detail.

INDIA RUBBER, GUTTA PERCHA AND TELEGRAPH WORKS COMPANY.

Profits for the past year came to £66,810 nett. Adding £12,224 brought forward and deducting the interim dividend which took £12,500, the disposable balance is £66,534. Out of this the final dividend of 15s. per share is recommended, making the total payment, including the interim dividend, to net 10s. for the year. This will leave £49,034 to carry forward, or £6,81[illegible] more than was brought in. The general business of the company shows an increase compared with the previous year, but the prices of raw material remained at a high standard until the end of the summer quarter, although since then they have declined. The board also adds that the Palmer and Dunlop motor and bicycle tyres continue to grow in favour with the public, and further inform the shareholders that the electric installation in Dumfries has been completed, and will no doubt prove a source of revenue. Gross profits, it may be added, show an increase of £22,761 compared with the previous year, and current expenditure went up by only £3,002 to £68,454, the gross profit having been £109,484. Debenture interest at £10,[illegible] showed a slight reduction. Depreciation was allowed for on buildings and machinery to the amount of £22,620, and the whole of that property stands in the books at £557,232. The reserve fund is £450,000 against a debenture issue of only £400,000. Debts due by the company, including a loan from the bank, amount to £152,394 and debts owing to it are entered at £135,848, besides £3,230 in bills receivable. Cash with bankers stands at £24,002, stock-in-trade at £386,644, shares in other companies at £61,742 and cash, stock, debts, &c., at Persan and agencies at a nett amount of £410,530. The cost of the issue of debentures figures in the balance-sheet as an asset at £3,900, and that had better be wiped out. Otherwise the exhibit is decidedly more encouraging.

GENERAL MOTOR CAB CO., LIMITED.

Its first report, bringing the figures and facts down to May 13 last, has just appeared this week, and it naturally deals more with the future than the past, for up to that date very little business had been done. The company had not got possession of its cabs and was busy in putting up its workshops and garages. Hence there are no profits to be shown in this balance-sheet. On the contrary, there is a deficiency of £9,682, of which £3,396 is due to depreciation allowed for to date, but since May last progress has been rapid and most satisfactory in character, the directors say. Between May 13 and November 13 last, a period of six months, 300 taximeter cabs have been in average daily use. At the first date the number at work was 58 and at the second 467. Altogether 500 taximeter cabs have been delivered and are now fully employed, while another thousand are on the point of delivery, so at the commencement of the coming season the whole 1,500 is expected to be in full earning power, and in the six months during which the cabs in steadily increasing numbers have been upon the streets the debit balance just mentioned has been completely wiped out and a profit earned sufficient to justify the declaration of an interim dividend at the rate of 7 per cent. per annum for the current year on the preferred ordinary shares. It will be the pleasant duty of shareholders at the forthcoming meeting to sanction this dividend. The preferred ordinary shares issued amount altogether to £378,040. The balance-sheet calls for no particular comment, because until a full year's business figures have been published no estimate can be made as to whether the allowances for depreciation are adequate.

CONTINENTAL UNION GAS CO., LIMITED.

This company owns a large interest in the Union des Gaz of Paris, from which it draws the greater part of its revenue, but it has also two stations of its own at Messina and Montargis. During the year ended June 30 the Union des Gaz obtained concessions for the lighting of three more Communes adjoining Paris, and also contracted for the supply of electricity in two districts. Its private consumers increased by 14,791 to 229,194 and the public lamps increased by 468, with a resulting improvement of about 8 per cent. in the quantity of gas sold, and after putting £12,000 to sinking fund and £44,000 to various reserves the dividend was maintained at the same rate as for 1905-6 and £15,176 was carried forward. After deducting French and English taxes the dividends paid to this company amounted to £61,066, to which were added £8,709 for profits at Messina and Montargis and £5,022 for interest, &c., making a total of £75,697. Management charges took £4,036 of this, £2,934 was written off for amortisation of works, and £2,000 put to suspense account at Messina, leaving £66,727 to be dealt with, out of which dividends of 7 per cent. on the preference stock and 6¼ per cent. on the ordinary stock are paid and £1,428 is added to the balance brought in, raising it to £73,140. Expenditure on capital account, including cost of land for new works at Milan, was £112,011, and the total is now £802,404, made up of Union des Gaz shares £588,485, Messina outlay £84,540, and Montargis and Chalette outlay £19,253. Other assets consist of £34,411 due from the town of Messina for arrears, £71,016 invested in sundry securities, and £13,573 in cash, which in addition investments valued at £40,424 are held on account of the reserve fund of £40,000.

DUNLOP PNEUMATIC TYRE CO., LIMITED.

Improved figures are shown all round in the statement of accounts for the past year. The largest proportionate increase, however, is in transfer fees, which have risen from £180 to £1,303, but as all classes of shares are under par, the numerous transactions hardly betoken a public demand for the securities. Even at the enhanced figure of £19,050, an advance of £8,754 or over 40 per cent., trading profits are in no way commensurate with the colossal items of capital and creditors, goodwill and stocks on hand. Increased dividends on investments in subsidiary companies are the chief factor in the larger revenue, these having risen from £101,277 to £107,777; their capital valuation in the same time has been increased by £19,317 to £38,040. [illegible] £12,441 by £127, the interest on £3,500 debentures [illegible] Depreciation allowance £6,471

is slightly less than last year's, when £6,306 was set aside, but after all premises and plant are comparatively small items, and almost hidden by goodwill. Directors', trustees' and auditors' fees are £3,700 as before, and, including £16,040 brought in, £216,518 is available compared with £165,787. Out of this 5 per cent. is paid on preference and 8 per cent. on ordinary shares for the year. The deferred got an interim at rate of 5 per cent. and a final at 10 per cent. makes 7½ per cent. for the year. Goodwill is to be written down £60,000 from the much reduced but still extravagant figure of £1,727,535. At this rate it will take over 28 years to wipe it out. But, under any circumstances, the whole or a large portion of it has been sold for value received from sub-companies, and consequently it should not figure separately to anything like its present extent. All payments and assignments made, £19,272 is carried to next account. In the balance-sheet premises are written down by £1,085 to £42,308. Plant, &c., after writing off £4,386, will, including small additions and sales, now stand at £24,420. Sundry debtors, including dividends accrued, have increased by no less than £81,861 to £282,135, but the floating debt has risen still more by £96,423 to £258,795. Stocks on hand are £32,285 higher at the wild figure of £309,882, a large sum to be eating up interest, and which cannot appreciate in value. Investments have already been noted, and cash and bills total £75,762, just about the amount required for the dividends and much the same as last year. The reserve for purchase of debentures remains at £25,000, and is assisting to finance subsidiary companies, or is locked up in stock which remains unsold.

Khedivial Mail Steamship and Graving Dock Co., Limited.

During the year ended June 30 this company earned a trading profit, including Government subsidies and transfer fees, of £55,336, and after providing for administration charges and debenture and loan interest and writing off £19,000 for depreciation the nett profit was £28,550. To this was added £15,470 brought forward, making a total of £44,020, out of which £10,000 is set aside as a special appropriation against probable loss on realisation of old steamships, and the ordinary shares are given a dividend of 10 per cent., leaving £13,025 to be carried to the next account. Two new vessels were added to the fleet at a cost of £59,187, bringing the total value of the properties, less depreciation, up to £463,627, and as the issued share and debenture capital is only £369,767 the company has had to raise £74,117 on loan, as well as to employ the insurance fund of £18,902, and is still hard pressed for ready money. Sundry creditors and bills payable come to £46,853 against sundry debtors £32,241, stocks of coal, &c., £32,923, and balances due from agents £9,541, while so far from having any cash in hand £2,269 is owing to the bankers. Another steamer has been bought since the conclusion of the financial year and the need for further funds is therefore becoming urgent, but the directors have not yet taken any steps to issue the additional capital authorised in December last, and have that to fall back upon.

Horder Collieries, Limited.

The directors of this undertaking have a fairly satisfactory story to tell in their report for the fifteen months ended September 30. The output from the collieries was 930,338 tons, a fine advance over the preceding twelve months, mainly from the Horder Colliery, and the profit on working is returned at £69,797, depreciation provided for. Sum brought forward was £6,561, making £76,357, from which debenture interest takes £16,614, and interim dividends or interest in lieu thereof have accounted for £19,204. It is now proposed to pay a final dividend of 3 per cent., making 7½ per cent. for the fifteen months on all shares, except those that have already received interest; another £5,000 is allowed for depreciation, £15,000 goes to reserve, and £5,478 is carried out to the credit of the current year. Capital expenditure in the fifteen months on coke ovens, colliery equipment, and houses was no less than £179,792, but houses and land were sold to the amount of £84,246, reducing the nett additions to £95,546. Altogether, 1,109 houses have been completed, and while Shotton now has as many as it needs, some hundreds more must be erected at Horder in order to raise the quantity of coal for which the colliery was equipped. The issue of the balance of the share capital was authorised by the board, and £50,000 of this allotted to shareholders. The remaining £150,000 has been either issued to or reserved to meet the requirements of the debenture stockholders. At the date of the report the option to which they are entitled has been exercised to the extent of £102,040, and the requisite shares have been allotted. Of the stock thus surrendered, £62,635 has been reissued at 5 per cent. premium. Capital outlay at present figures for the heavy sum of £839,169, and in addition to an important debenture debt the company has loans of £51,871 and an adverse trade balance. The sum now appropriated is the first contribution to reserve, but much of the capital outlay was not bearing fruit during the past fifteen months.

North-Eastern Steel Co., Limited.

This company's works were fully and profitably employed for practically the whole of the year ended September 30, the production and deliveries of finished material being the largest in its history. During the last few months there was a gradual falling off in demand, and this with the advance in the cost of fuel caused a considerable contraction in the margin for profit, but in spite of that the trading profits reached the fairly large total of £68,931. Adding £3,059 brought forward the available total was £71,990 and after providing for debenture interest £20,148, directors' fees £1,000, workmen's compensation insurance £1,212, and income-tax £1,000 a balance of £48,630 was left. Out of this £18,000 is written off for depreciation and £6,800 applied in the purchase of £6,800 second mortgage debentures in the open market, after which shareholders get 5 per cent. and £3,830 is carried forward. Capital account now stands at £561,110, while movable stocks are valued at £194,068 and against these reserves of various kinds, all in the business, come to £16,300. Trading accounts are decidedly favourable, and in addition the company has £32,726 in cash.

Millom and Askam Hematite Iron Co., Limited.

This company has had a most inglorious existence since its formation in 1890, and only on three occasions has it managed to make any return on its ordinary shares, while the preference dividend has frequently been in arrears. Business, however, would appear to have been pretty good during the twelve months ended September 30, as the profits on pig-iron manufacturing and mines and quarries, including dividend to June 30 on shares of the Alquife Mines and Railway Co., Limited, and £67 from transfer fees, amounted to £86,994. Interest on debentures and other charges took £7,655 of this, and with £13,398 brought forward the disposable total was £92,737, out of which two years' preference dividend is paid, £30,000 is written off for depreciation, and £15,000 is set aside to form a reserve fund. The surplus then remaining is sufficient to enable the directors to pay a dividend of 10 per cent. on the ordinary shares for the third time in the company's history, the other two occasions having been in 1898-9 and 1899-1900 and to carry forward £11,848 or £1,550 less than was brought in. Capital expenditure, after deducting depreciation, stands in the balance-sheet at £229,940, and in addition the shares held in the Alquife Company are valued at £150,000 against which the reserve consists of the £15,000 now set aside. Trading balances are in the company's favour, sundry creditors amounting to £36,695 against £54,398 to come in from debtors, while stocks of various kinds total up to £61,289 and £37,406 is held in cash.

Weldless Steel Tube Co., Limited.

After writing off £3,644 or £121 less for depreciation and providing for administration expenses and repairs the nett profits for the year ended September 30 were £1,600 up at £6,470. Adding £3,176 brought in the disposable total was £9,655 or £3,106 more, and the directors have decided that the improvement is sufficient to enable them to declare a dividend on the ordinary shares, which accordingly get 5 per cent., and even then the sum carried forward is raised by £1,157 to £4,333. We suppose it is only natural that this dividend should be declared, but the position of the company does not justify any distribution being made. Freehold and leasehold properties have been reduced by £1,849 or practically the expenditure for the year, and stand at £31,465, while goodwill, patents, &c., remain at £21,300, and the allowance for wastage on plant, &c., is only £216 in excess of the additional outlay, leaving the item at £56,928, against which there is only a tiny reserve of £8,000, all in the business. Trading balances, too, are decidedly adverse, £30,008 being due to sundry creditors against £23,879 to come in, and cash and bills have shrunk to £138, but stocks and work in progress are valued at £23,985 or within £100 of last year's figures.

London Scottish American Trust, Limited.

This company did not do nearly so well out of its dealings in securities during the year ended October 31, as the profit realised was only £3,815 compared with £17,060 in the previous twelve months. Other revenue, however, was a little better, and with £1,783 more at £5,431 brought forward the decrease in the total income was £10,387 at £79,587. Debenture interest and administration expenses having been met the nett amount available was £54,232, and in order to repeat the dividend of 6½ per cent. on the deferred stock the directors transfer only £5,000 to reserve against £20,000, and carry forward £10,044 or £4,613 more. Considering that the bulk of the company's investments is in American securities the action of the directors in thus reducing the provision for reserve seems decidedly short-sighted. They admit that a valuation of the investments, which stand in the balance-sheet at £1,471,965 or an increase of £19,428, shows a depreciation of £118,422 or about 8 per cent. Against this, it is true, there are reserves amounting to £165,000, but the further shrinkage in values which has since taken place has probably more than wiped this out. We may be sure that bottom has not yet been reached, and in view of the general outlook it would have been much more prudent if an effort had been made to strengthen the reserve by at least a similar amount to that set aside a year ago. As it is, the company is working from hand to mouth and will apparently have to borrow the funds to meet the dividends now declared, as in spite of a temporary loan of £19,000 it owes £2,255 to sundry creditors and has no more than £1,125 in cash.

Scottish Investment Trust Co., Limited.

This company's report and accounts for the year to November 1 call for only the briefest notice. Revenue under all heads was £42,637 or just £2,000 more than in the previous twelve months. Interest on debentures and loans took £10,063, and there was a balance of loss on realisations of £2,390. Management and other expenses took a further amount of £3,474, and £26,710 remained, a decrease of just over £1,000. After meeting the dividend on the preferred stock at 5 per cent. the distribution on the deferred stock will again be 4 per cent. with £5,334 against £6,337 carried to reserve. The latter fund now amounts to £46,086 against £40,752, and there has been a corresponding increase in the investments, which are £814,977 compared with £808,486. Cash balances are a bit better than a year ago, but the secured loan from bankers is £5,000 larger at £13,000.

ESPERANZA NITRATE CO., LIMITED.

This company's original grounds have been practically worked out, and during the year ended September 30 attention was mainly devoted to the equipment of a new oficina at Blanca Union. The work of construction occupied a much longer time than the directors anticipated, owing to the late delivery of materials, due to the earthquake in Valparaiso, and instead of being available by the end of March the machinery was not ready until the end of September. For nine months of the year ended June 30 no nitrate was produced, and the directors therefore do not submit a profit and loss statement. A considerable stock of caliche was extracted ready for treatment, and the funds required had to be borrowed from the Valparaiso bankers, but thanks partly to the receipt of the final instalments on the £70,000 debentures issued in the previous year, the overdraft shows a reduction on balance of £5,074 at £32,891. Sundry creditors are £2,674 down at £6,166, but the sum due from sundry debtors has been practically all collected, and this item has dropped from £13,618 to £912, while cash is £3,162 lower at £1,996. Stocks of nitrate and caliche are valued at £18,642, so that the company started work for the current year under favourable conditions, but there is a heavy suspense account of £13,164 to be wiped out, including £4,564 for cost of issue of debentures. Property at Esperanza is valued at £42,319, and in addition £36,088 has been spent on the new plant and machinery.

PEARSON FIRE ALARM, LIMITED.

It is a distinct pity that the company owning this useful invention should have been capitalised at a figure that militates seriously against its success. The idea is an excellent one in all respects, but when we see that patent rights and goodwill cost £110,393, the non-success of the venture from the commercial point of view is in a sense explained. The report just issued is for the year 1906, and the directors tell us that they postponed the annual meeting until the result of their application to the tariff insurance offices for a further rebate was known, and it could be seen how the concession, which was duly granted, would affect the business. The results, while encouraging, "still clearly demonstrate that the rebate so far granted to our automatic fire alarm is not commensurate with its proved merit." However, the semi-official recognition which local authorities are giving to automatic fire alarms is an encouraging sign, and the company unquestionably makes progress, although the increased cost of installations rendered necessary to comply with the stringent rules of the tariff offices tends to limit the business. The additional rentals in respect of new installations for 1906 are more than double those for the preceding twelve months, which gives a prospect of a fixed recurring revenue, yearly increasing. Unfortunately income and outlay do not yet balance, and on account of the period under review there was a debit of £948 despite the fact that another £5,647 was added to development account, making the total £22,525. Total deficiency is now £11,640, and we note that the company is getting somewhat short of cash.

KUALA LUMPUR RUBBER CO., LIMITED.

The first report of this company covers the period from May 19, 1906, to June 30 last and shows that receipts from estate produce during that time amounted to £21,234 of which £12,930 came from rubber. Interest and transfer fees gave a further £634 making a total of £21,868, and after meeting all charges the nett profits were £7,612. Of this £109 being profits prior to the incorporation of the company has been written off capital outlay, and out of the balance a dividend of 3 per cent. is recommended leaving £2,103 to be carried forward. Owing partly to a higher method of cultivation having been adopted and partly to a prevalence of wet weather the expenses of capital development proved heavier than expected and a considerable outlay had also to be made on buildings, as many of these were very old and insanitary. A sum of £1,405 received from the vendor in respect of shortage of land has been deducted from the property account, which now stands at £155,096, buildings, machinery, &c., after providing for depreciation, are valued at £3,815 and £8,755 has been spent on development, but the company still has ample funds as cash balances come to £17,830. Liabilities to sundry creditors amount to £4,813 against which rubber, coffee, &c., in hand came to £4,667 and debtors owe £1,147. The company now has 2,630 acres either planted or available for planting with rubber, and the visiting agent estimates that there will be about 37,700 trees tappable during the current year from which he expects a yield of 74,400 lbs.

NEXT WEEK'S MEETINGS.

MONDAY, DECEMBER 16.

African Lakes.—Glasgow, noon.
Anglo-Continental Gold.—Winchester House, 12.15 p.m.
Ashanti Goldfields.—Holborn Restaurant, 12.30 p.m.
Bartholomay Brewing (of Rochester).—Winchester House, 3 p.m.
Car and General Insurance.—Winchester House, noon.
Dunlop Pneumatic Tyre.—Hotel Cecil, noon.
Florencia Nitrate.—Winchester House, 12.30 p.m.
General Motor Cab.—Salisbury House, noon.
Great Indian Peninsula Railway.—Salisbury House, 12.30 p.m.
Indian Midland Railway.—Salisbury House, 1 p.m.
Interoceanic of Mexico.—Winchester House, noon.
Mutterberg Copper.—Winchester House, noon.
New Queen Gold Mining.—65, London Wall, E.C., 4 p.m.
Pahang Consolidated.—Winchester House, 12.30 p.m.
R. and J. Pullman.—Winchester House, 3 p.m.
Showell's Brewery.—Stockport, noon.
Singer and Co.—Coventry, noon.

TUESDAY, DECEMBER 17.

Assam-Bengal Railway.—Bishopsgate House, noon.
Barsi Light Railway.—Winchester House, noon.
Bengal-Nagpur Railway.—Gresham House, 2.30 p.m.
Burma Railways.—Gresham House, 12.30 p.m.
Champion Reef Gold Mining of India.—Cannon Street Hotel, 12.30 p.m.
Commercial Bank of Scotland.—Edinburgh, 2 p.m.
Hovis Bread Flour.—Caxton Hall, S.W., noon.
India-Rubber, Gutta Percha and Telegraph Works.—106, Cannon Street, E.C., noon.
Koffyfontein Mines.—Winchester House, noon.
Madras Railway.—Salisbury House, 2.30 p.m.
Millom and Askam Hematite Iron.—Preston, noon.
New Gold Coast Agency.—Cannon Street Hotel, noon.
New Lisbon-Berlyn.—Salisbury House, noon.
North Queensland Mortgage and Investment.—2, Suffolk Lane, E.C., 3 p.m.
Palmer Tyre.—106, Cannon Street, E.C., 2 p.m.
Peruvian Pacific Railway.—Westminster Palace Hotel, 2 p.m.
Road Block Gold Mines of India.—6, Queen Street Place, E.C., 3 p.m.
Robinson's Brewery.—Cannon Street Hotel, 2.30 p.m.

WEDNESDAY, DECEMBER 18.

Blaenavon Company.—86, Cannon Street, E.C., 2.30 p.m.
Benskin's Watford Brewery.—Cannon Street Hotel, noon.
Bullard and Son.—Norwich, 2 p.m.
City of Chicago Brewing and Malting.—Winchester House, 3 p.m.
Costa Rica Electric Light and Traction.—Dashwood House, 3 p.m.
East Indian Railway.—Cannon Street Hotel, noon.
Fanti Consolidated Mines.—Cannon Street Hotel, 2.30 p.m.
Hutti (Nizam's) Gold Mines.—Winchester House, noon.
Jumbo Gold Mining.—Winchester House, 3 p.m.
Luipaards Vlei Estates.—Cannon Street Hotel, noon.
Nantyglo and Blaina Ironworks.—Westminster Palace Hotel, 1 p.m.
North Lonsdale Iron and Steel.—Ulverston, noon.
Pacific Nitrate.—Winchester House, 12.30 p.m.
St. Anne's Well Brewery.—Exeter, 12.30 p.m.
Sulphide Corporation.—Winchester House, noon.
Sydney Harbour Collieries.—Winchester House, 3 p.m.
Transvaal Estates and Development.—Winchester House, noon.
Waterlow and Sons.—26, Gt. Winchester Street, E.C., 1 p.m.

THURSDAY, DECEMBER 19.

Adelaide Electric Supply.—Finsbury Pavement House, noon.
African Banking.—Cannon Street Hotel, 12.30 p.m.
Argentine Southern Land.—River Plate House, noon.
Bulawayo Syndicate.—Winchester House, noon.
Cold Storage Trust.—Winchester House, 12.15 p.m.
Consolidated Mining and Investment.—Winchester House, 2.30 p.m.
Frontino and Bolivia Gold Mining.—Winchester House, 2 p.m.
Government and General Investment.—19, Tokenhouse Yard, E.C., noon.
Imperial Bank of Persia.—Cannon Street House, 2.30 p.m.
Kinta Tin Mines.—65, London Wall, E.C., noon.
Mount Yagahong Exploration and Finance.—Winchester House, 2.30 p.m.
New Kempinkote Gold Field.—Cannon Street Hotel, 1 p.m.
New Zealand and Australian Land.—Edinburgh, noon.
Northern American Trust.—Dundee, noon.
Salisbury Building and Estates.—Cannon Street Hotel, 3 p.m.
South African Supply and Cold Storage.—Winchester House, noon.
Spitzkop Farm Gold.—Cannon Street Hotel, noon.
United Indigo and Chemical.—Manchester, 11 a.m.
United Realisation.—Cannon Street Hotel, 2.30 p.m.
Westralia Mount Morgans Gold Mines.—Winchester House, noon.

FRIDAY, DECEMBER 20.

Army and Navy Investment Trust.—Winchester House, noon.
British Empire Land Mortgage and Loan.—Cannon Street Hotel, noon.
Cargo Fleet Iron.—Middlesbrough, 1 p.m.
Copiapo Mining.—Winchester House, noon.
D. Jones, Dickinson, and Co.—Winchester House, 3 p.m.
Edinburgh United Breweries.—Edinburgh, noon.
Gold Finance.—139, Cannon Street, E.C., 12.30 p.m.
Great Central Railway.—Manchester, noon.
Great Northern Railway.—King's Cross, noon.
Henderson Transvaal Estates.—Cannon Street House, noon.
Kaneika United Goldfields.—Winchester House, 12.30 p.m.
Land and House Property.—Winchester House, 2.30 p.m.
London Woollen.—Cannon Street Hotel, noon.
New Timbique Gold Mines.—88, Bishopsgate Street Within, E.C., 11.30 a.m.
Ottos Kopje Diamond Mines (1903).—Winchester House, 3 p.m.
Port Madryn (Argentine) Co.—River Plate House, noon.
Queensland Copper.—6, Princes Street, E.C., noon.
Santiago Nitrate.—Winchester House, 12.30 p.m.
Sesan Syndicate.—Winchester House, noon.
Tanganyika Concessions.—Winchester House, noon.
Zambesi Exploring.—Winchester House, 2 p.m.

Messrs. J. Henry Schroder and Co. have received a cable from their Santos agents advising them that they have further encashed £25,000 in respect of the surtax collected weekly for the service of the State of San Paulo 5 per cent. Exchequer Bonds Loan, making a total of £412,200 encashed since August 1.

COMPANY MEETINGS.

PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY.

The 67th annual general meeting of the Peninsular and Oriental Steam Navigation Company was held on Tuesday, December 10, at the offices of the company, 122, Leadenhall Street, London, E.C., Sir Thomas Sutherland, G.C.M.G., LL.D. (Chairman of the company), presiding.

The Secretary (Mr. George Frederick Johnson) read the notice convening the meeting.

The Chairman said: Ladies and Gentlemen,—I conclude, of course, that you will take the report, as usual, as read, and, therefore, it becomes my duty to move its adoption. The year which has passed over our heads has been one of somewhat varying experiences, but has closed, on the whole, as you perceive, very successfully—in fact, more successfully than at one time some of us ventured to hope. We are enabled to pay the dividend and bonus to which you have been accustomed now for some years, averaging, as you are aware, a return of 9 per cent. over the total amount of your paid up stock. And we do so after setting aside the handsome appropriation of £460,000 for the purpose of depreciation; that is to say, £80,000 more than the normal 5 per cent. on the original cost of your fleet. Gentlemen, the soundness of that policy in writing down the values of our fleet has been approved of by you over and over again, and I think I may say that it is reflected in the market value of your stock, the comparative steadiness of which is, I think, remarkable in these days of the *bouleversement* of what are called gilt-edged securities. (Hear, hear.) The most prominent feature in our revenue account is, of course, that our freight receipts amounted to £1,155,615, or about £34,000 above the same receipts last year, a very small addition to our revenue in comparison with the work which we have actually done. But, as a matter of fact, everyone is aware that during last year, and I may say during the last two years, trade has in no sense been in that condition which we call booming, and we have had, in this company some special drawbacks to contend with which have seriously affected our resources and our revenue. Undoubtedly the most serious of these drawbacks was the great fight which we had, and which endured for over two years at Antwerp with our German friends—a fight in which I may say that this company and all other companies concerned have bled freely. We have had a treaty of peace with our German competitors since May or June last, but the treaty has not been operative so far as rates of freights are concerned, because in our mutual eagerness to maintain the battle we all entered into engagements for many months forward and at fighting rates. I need not recapitulate the cause of the dispute, which I described to you last year, but I will merely say that Antwerp, as a port, is more necessary to us now than ever it has been before, because it is absolutely impossible for us to fill our ships either to or from the port of London alone. The trade with the Continent in connection with the Far East has increased, and is increasing, and I fear that tendency is likely to continue, which is not altogether a matter of surprise, seeing that, after all, the Continent of Europe is a good deal larger than this little island of Great Britain. I think, perhaps, the situation may be somewhat improved if eventually London should happily become a more economical port for ships than it is at present. We have been promised for several years legislation in the direction of settling the future authority of the Port of London, and I believe that we are very near now to the achievement of a project of that character. On that subject I know nothing more than the man in the street knows from what he sees in the Press, but I will venture on this subject to make this observation, that when the port authority is constituted I sincerely hope that the improvement and the extension of the facilities on the River Thames will take rather the direction of being increased at the mouth of the river than up the river in the vicinity of the Victoria Docks. I am not sure whether I may be treading on the corns of any of my friends in connection with the dock companies, but I am certainly controverting the opinion which I once held on this subject myself, for a good many years ago I moved and carried an important instruction in the House of Commons, requiring the Thames Conservancy to deepen the river in order that deep docks should be constructed in the vicinity of the present Albert Dock. On that subject I may say that I have changed my mind absolutely on account of the increased and increasing size of vessels, and of the necessity of facility of access for those great vessels to the nearest approach on the River Thames, and my change of view on the subject is also affected by this consideration, that since the time at which I brought forward the resolution of which I have been speaking, traction on land has undergone a total revolution, and by means of petrol and steam traction we are now enabled, provided we have proper roads and bridges, to bring the district of Tilbury as conveniently near to the centre of London as the Albert Dock was, and is, at the present moment. We have had also in our business last year another somewhat serious disadvantage, to contend with. The whole of our intercolonial trade between Bombay and Japan has been, I may say, for the time being at all events, wiped out by the energy of our Japanese competitors. We are on the most friendly possible terms with out Japanese competitors, but they have been, I imagine, to a certain extent forced by their Government to increase their departures from Bombay to such an extent that, so far as the trade of Japan is concerned, we have been completely left out in the cold. Now the trade between Bombay and Japan, which consists chiefly in raw cotton, amounting to about 700,000 bales in the course of a year, is an absolute monopoly, and is worked as a monopoly between an association of spinners of Japan and the shipowners who are engaged in the trade. A few years ago, gentlemen, when we found that we were not obtaining our share of this freight, we absolutely disbelieved in a monopoly, we thought it was impossible that an enlightened people like the Japanese would shut their eyes to the advantages of free trade and competition, and in order to demonstrate our case we purchased on your account one or two cargoes of cotton, which we sent to Japan; and to our horror and surprise we found that we could not sell one single bale, and we had to bring it all back either to Hong Kong or to Bombay, I forget which. Now, gentlemen, we have up to this year been able to carry on and to obtain a share of the trade in association with our Japanese friends, and I may say, to use the easiest possible word, under their suzerainty, but this year they have increased their sailings, so as to shut us out, which seems hardly fair to us, and to others, seeing that during the war between Russia and Japan we carried on the whole of the business for the benefit of the Japanese manufacturing interests. Now, gentlemen, the state of affairs to which I refer does seem very strange to myself, because, when I first went to Japan in order to open up the mail service of this company with Japan, the Japanese had hardly seen at that time a steam vessel of any kind. The denouement is startling in the extreme. It seems to me as if the soul of the people which had lain dormant for centuries without any intercourse with foreign countries, had suddenly awakened to a degree of what I may call almost supernatural activity. But, gentlemen, there is another somewhat curious feature, having nothing whatever to do with the Japanese, but in connection with this intercolonial trade of ours between Bombay and China. The great extent of the trade consists in the shipment of cotton yarn, which, as you are aware, is manufactured now in Bombay as if Bombay were a second Manchester. The trade has been somewhat dull in China during the past year, and so far as I know, for the first time in history, 50,000 bales of Bombay cotton yarn have this year found their way into Europe. Now, it is a matter of somewhat curious speculation to the philosophic mind whether this circumstance is a mere incident or whether it is a prophetic note of the influence of cheap labour in the Far East, of which we may hear a great deal later on. But, gentlemen, if we have had the drawbacks to contend with to which I have been referring, I need hardly say that we have had also some countervailing advantages; otherwise I fear that our profit would not be what we show it to be to-day. We have had, for instance, a larger extent of transport service this year, because we have had five ships employed instead of four, although I am sorry to say not at the flourishing rates at which they were engaged during the South African war, but at very low rates indeed. Then that admirable yacht of yours, the *Vectis*, in which, by the way, every shareholder should make it a point of taking a holiday once a year—(laughter)—has also yielded us this year a modest return. And we have obtained an advantage as well in the improved trade with Australia after the many years of depression under which the trade has suffered. But I cannot say, to speak frankly, that the prospects of shipping in the way of freights at the present moment are by any means of a brilliant character. There is not—I think without reason—an apprehension of famine or of a partial famine in India. There is apparently, also, a risk of drought in Australia; and there is, above all, the financial situation in which the world finds itself at the present moment, and which must necessarily react in an unfavourable manner on trade generally. But above all these, so far as shipping is concerned, there is the simple fact that the tonnage of the world is too plentiful and is in excess of trade requirements, seeing what those requirements are, and if we are not always working at fighting rates, why, we always appear to be on the immediate verge of doing so. Now, gentlemen, I turn to our passenger traffic, and I have a more satisfactory report to make. Our passenger traffic amounted last year to £1,151,022, an increase of about £64,000 over the previous year, and you will probably remember that the previous year gave us an increase of £100,000. In fact, there can be no doubt that an increase of £160,000 in the extent of our passenger trade shows, at all events, what you may call a healthy expansion, and especially so as this expansion does not belong to any one particular line or branch of our service, but permeates, I am glad to say, the company's system generally. But, on the other hand, of course, I need not remind you that we have placed many new and costly ships on your line during the last three or four years, which has necessarily raised our current expenditure to a higher figure. I believe I have said before in reference to this topic that, in my judgment (and I venture to say that my opinion, although I may look at it from a modest point of view, is as likely to be as sound as any other man's), of the gross passenger traffic which we earn, 90 per cent., if not more, runs away in expenditure, and the utmost we can consider as profit would not be more, and probably less, than 10 per cent. Well, in these circumstances, you can hardly feel surprised at having to face the enormous advance in the cost of coal which has taken place recently. We in concert with all the companies—or all the important companies, at all events—trading with the Far East, felt compelled to impose a sur-tax of 10 per cent. on the amount of our passage money, as we did some years before, and afterwards removed it when coal came down to a more legitimate figure. This decision has been generally recognised by the public as perfectly fair, although to them it is an unpleasant necessity. But at the same time, we never avoid opposition,

and a crusade has been started on the Bombay side of India, headed by a newspaper of considerable influence, with the lamentable object, and, I hope, the impossible object, of boycotting this company's steamers. I may say that those who have started this idea have, with "patriotic" fervour, sought to enlist the great German companies, but so far unsuccessfully, in order to suppress and put an end to what they call "the monopoly and the tyranny of the P. and O. Company." Well, gentlemen, I suppose we must make allowances for these cases. I have no doubt that the editor of this newspaper is a fair and high-minded gentleman, but it does seem a somewhat curious fact that in his leading articles with regard to the P. and O. Company he should have absolutely omitted this very simple, plain, and necessary consideration, that even Indian coal, which, one would think, is immediately under his nose, has advanced 50 per cent. in the last two years. But then, if we are monopolists, I should like very much to know where, and in what direction, our monopoly lies, because, so far as I am aware, we have to struggle hard every day for every penny which the company earns. Where is our monopoly, for instance, in regard to the passenger traffic to Bombay? I look into the figures, and I find that in the passenger traffic to and from Bombay we carry a percentage of about 60 per cent., which is most assuredly not a monopoly. Therefore the editor to whom I am referring and his friends may find plenty of cheaper ships, or, at all events, plenty of other ships, to carry them, if they desire to avoid this company's ships; but whether those ships will be of the same class, of the same speed, and of the same comfort, those are questions that he must settle for himself. (Applause.) Gentlemen, where is "the grievance and the tyranny" with regard to our passenger rates? There are two very important factors which enter into the investigation of the question. The first of these is one which I daresay newspaper editors never consider, namely, the great preponderance of the return ticket business which we carry on. I think, speaking of the Bombay passenger traffic, that every second ticket we issue is a return ticket, at a fare and a-half, available for two years. The second factor is equally, and, perhaps, even more important, and it is the serious proportion of second-class passengers whom we carry under similar conditions at a very low rate. Now, the net result of these factors is that in connection with this great Bombay trade, the company receives per passenger but a very little over £30, and that during a very short season, as everyone knows, of three months outward and three months homeward, while we are running ships which cost from a quarter to one-third of a million sterling at a speed of 16 knots, and burning coal which costs all round about 25s. per ton. But there is also another factor in this case which nobody except ourselves can be expected to discern. The mail steamers running to India, or to China, or to Australia, can carry but very little cargo, and that cargo in the case of Bombay is caried at exceptionally low rates, both outward and homeward. But although they carry so little cargo, they have to pay canal dues upon an enormous tonnage, and the result is that, after debiting the cost of the canal dues in proportion to the amount of cargo carried, there is a residuum of dues which has to be provided, and which amounts per head to nearly £6 on every passenger we carry to Bombay. In fact, it would be utterly impossible to run the mail steamers which we run to India, to China, or Australia, except under the operation of a mail contract. Gentlemen, about our expenditure account I need say comparatively little, because, with the exception of our repairs and renewals, all our navigation expenditure during the past year has been higher than it was in the previous year in coals, victualling, port charges, and Suez Canal dues. This is in a great measure owing to the advance of prices and owing to the increased size of our vessels. On the advance of prices the latest observation which we have had to make is that for flour alone, which I need hardly tell you is a heavy item with us, we have to pay from 40 per cent. to 50 per cent. more than we paid last year. Our mileage has been greater this year than it was before, and it has amounted altogether to nearly 3,200,000 nautical miles. Summing up the total result of our income on the one side, and of our expenditure on the other, we find that the difference in favour of this year is something between £7,000 and £8,000. Our accounts show as good a result, therefore, as last year, and something nearly approaching to £8,000 better. Now I think I may venture—for this is the first opportunity I have had of doing so—to congratulate you on our new mail contract, which settles and defines in a great measure the course of your business for the next seven years. Our proposals were accepted after a long interval, because they were sent abroad to India and the Far East for the consideration of the authorities in that part of the world; but they were accepted eventually without any negotiations whatsoever, and seeing the trouble that some companies have in settling their mail contracts with the Government, or not settling them at all, we may perhaps consider ourselves on the whole very fortunate in this matter. The only drawback to the contract is that coal advanced very largely in price after we had sent in our tender, and if it had been possible we should certainly have liked to have amended our tender and to have added a sur-tax of 10 per cent. But that was impossible for many reasons, and in all probability it would have necessitated the contract being again put up for competition. Therefore, although in undertaking this more arduous service, *vis-à-vis* the present price of fuel, we feel some little anxiety for next year, we are perfectly confident that in the long run the contract will answer the company's purpose, as our contracts have done heretofore. It is a matter of some historic interest, at all events to myself, that in connection with the first mail contract which I ever had anything to do with, 30 years ago, the company was paid a very much larger sum for much smaller and inferior services. In the various contracts which we have made since that time we have saved the Government something like £200,000 a year, and we have at the same time accelerated the movement of the Indian mails by not less than a whole week, the China mail by a whole fortnight, and the Australian mails I think even a little longer. As a matter of fact, it has been our policy to connect the mail contracts with the general progress of the company, and I think to the moderation of our demands on the public purse on the one hand and the enterprise which we have shown in carrying out the service, once it is obtained, we owe the fact that for 67 years to-day the company has secured what I might call almost a monopoly of the mail contracts with the Far East. (Applause.) Now, it being a necessity of the mail service that we should contract for new ships, we have contracted for three new ships of the *Malwana* class on what I consider to be favourable terms, and also on favourable terms for a fourth ship of a special kind. It is to be a 19 knots express vessel, to run between Aden and Bombay. We considered very carefully in connection with this last-named vessel whether we should adopt the turbine system of machinery, but when we found that it would increase the prime cost of the ship and the consumption of coal (and coal costs now between Aden and Bombay 30s. per ton), these two important considerations led us, for the time being, not to adopt the turbine machinery. Now, you will remember that last year we were threatened with a new Australian service of an imposing character; in fact, a very ambitious scheme, and in powerful hands—but the scheme perished, as you are no doubt aware, stillborn, as some of us anticipated would be the case, and that was certainly the best possible result for all concerned, and assuredly so for the investors who intended to place their money in it. Now, the Australian mail contract that runs alternately with our own has been again given to our old friends the Orient Company, and we are very glad that that should be the case. But now we are threatened with another mail in our coffin—we are threatened, as I daresay you may have read in the newspapers, with what is termed the "All-Red Route," a scheme which we heard a great deal about at the time of the late Colonial Conference, and which is to run express ships like the *Lusitania* and the *Mauretania via* Canada to New Zealand and Australia. Well, it has been the ambition of Canada for many years to have an express service of this character, and I myself have been applied to once or twice in connection with the project, but up to the present time nobody has been willing apparently to meet the necessary expenditure in connection with it. Moreover, to extend an express service to New Zealand and Australia would, indeed, demand gigantic resources, and it would be a matter very interesting indeed to find out where those resources are to be found. There is another question which arises in connection with the project. The distance between Vancouver and Wellington, New Zealand, is, in round figures, 6,300 nautical miles, and how express steamers are to be built in order to carry coal for that distance is one of those engineering problems which I believe is, at the present moment, insoluble. I have not, therefore, been very much surprised to see by correspondence in the newspapers that there is a gradual toning down of the idea of this express speed for the Pacific part of the service, and it has been suggested that the ships engaged in the service should coal at Honolulu. But, good heavens! if the ships are to coal at Honolulu what becomes of the "All-Red Route," for Honolulu is an American port, and the "All-Red Route" would therefore seem to be merely a phrase to throw dust in the eyes of an innocent public. There is always, when Pacific development is talked about, something said about the eventuality of war closing the Mediterranean the route in which we are interested—and which, by the way, is far more an "All-Red Route" than the route which requires to coal at Honolulu. There is always some allusion to the risk of war in these circumstances. But the mail contract which we have entered into recently, and contracts that were even antecedent to that, required us, in the event of war, to transfer our steamers to whatever voyage or whatever line the Government required for the time being. Whether in case of war we should have to transfer our steamers to either the Atlantic or the Pacific is one of the questions which, of course, no one can express an opinion about at present; but there is the power existing for the Government at any moment to require us to enter a specific trade if it should be necessary; and while it appears to me that this project, so far as Canada is concerned, is a most legitimate project, although a very costly one, yet, so far as the Pacific route is concerned, there is no possible revenue which can be obtained in order to maintain it, because, of course, these steamers would merely carry passengers, and so far as passengers to Australia and to New Zealand are concerned, the traffic is utterly inadequate at the present moment to meet the requirements of the numerous lines which are at present running to those great colonies. Therefore, if this service were to be established, it could only be established at the expense of the Suez Canal lines in which you and I and so many others are interested. Now, gentlemen, speaking of the passenger trade to Australia, I am sorry to observe that the Commonwealth of that country have adopted a policy which is intended to exclude companies like ours from participating in the existing traffic of Australia—not because passengers do not wish to travel by our ships, but because the Government is practically in the hands of the trade unions, who dictate their policy in matters of this kind, which, I suppose, is in accord with the old Scottish saw of keeping "your ain fish-guts for your ain sea-maws." (Laugh-

ter.) We carried last year on the coast of Australia 8,000 passengers, and if the measure of which we have had notice is passed, as it is likely to pass in a very short time, we shall be deprived of an income on our Australian line of between £25,000 and £30,000 a year, which is, to say the least of it, somewhat disagreeable. And, unfortunately, this Commonwealth policy synchronises with the new tariff established in Australia, which certainly imposes on us immediately a very high charge leviable on all the stores on board our vessels, and which may have the even more serious effect of interfering with the general exports from this country. Where we are to look for compensation in these matters, of course, I cannot say, but Mr. Gladstone, I think it was, said on one occasion that "the resources of civilisation were not yet exhausted"—(laughter)—and I hope that there may be some resources in that direction available to us still. Now, gentlemen, I am sorry to have detained you so long, but I have touched on most of the points in connection with the year's history. There is, of course, as in all pictures, a good deal of light and shade in a statement such as I have made, but I think I may venture to remind you that in the last eight years we have paid our deferred shareholders altogether upwards of 100 per cent. on their capital, which is, at all events, a satisfactory state of affairs. I dare say that most of it has been laid by in the old stocking which most of us are supposed to possess. The future must speak for itself, but I may say that the company was never, in my opinion, in a stronger position that at the present moment. (Hear, hear.) It is perfectly true that we cannot look into the seeds of time, and see what grain will grow and what will not, but, at all events, I am confident on one subject, and that is that those who serve you, no matter in what part of the world they may be, will do their utmost, as hitherto, for the prosperity and prestige of this company, which, with all its faults and shortcomings, may still be reckoned as one of those enterprises of some pith and merit, of which no shareholder and no Englishman can be ashamed. I now beg formally to move the adoption of the report and accounts.

Mr. Samuel S. Gladstone: I have much pleasure in seconding that resolution.

Colonel Wheatley: I have to say something in regard to the engines of your new ships. I was much interested in what has been said in regard to providing the *Salsette* with turbines, but I notice that you did not mention the other ships; perhaps you will tell us whether the same reasons apply for not using the turbines in those vessels.

The Chairman: I think I have explained pretty clearly about the engines of the *Salsette*; they are triple-expansion engines, which we have adopted throughout our fleet, and which give most satisfactory results. The coal consumption of modern engines of that type would work out at 1.25 lbs. of coal, and everybody knows that that is a satisfactory figure. If we had adopted the other engines I am afraid that the coal consumed at the rate of 35s. per ton would have made a considerable addition to the cost of our work. I will now put the resolution, those in favour of the adoption of the report. The report and accounts were adopted unanimously.

The Chairman: I beg to propose that a dividend for the half-year ending September 30 of 2½ per cent. on the preferred stock, and 6½ per cent., with a bonus of 3 per cent., on the deferred stock, as recommended in the report, be now declared, and that the payment of the same be made, less income-tax, on and after the 17th inst.

Major-General Sir Owen Tudor Burne, G.C.I.E., K.C.S.I., seconded the resolution, which was unanimously agreed to.

The Chairman: I have now great pleasure in proposing that my friend Mr. S. S. Gladstone be re-elected a director of the company.

Lord Balfour of Burleigh, K.T., seconded the resolution, and it was carried.

The Chairman: I now propose that my friend Major-General Sir Owen Tudor Burne be re-elected a director.

Mr. W. G. Rathbone seconded the motion, which was at once adopted.

The Chairman: Gentlemen, that concludes the business of the meeting.

Professor Edward Hull, LL.D.: It is now my duty—and it is a gratifying duty—to propose the resolution which has been put in my hands, and which I consider it a great honour to have been entrusted with, namely, "That a vote of thanks be given to the chairman and the directors and staff from the shareholders present." I presume, Sir, that this includes under the term "staff" the captains of your ships and your officers and crews on the great ocean. In that case we shall, I am sure, be pleased to include the commanders of the ships and crews. I congratulate the company not only on its prosperity, but on the fact that you, Sir, are still able to give us these addresses, to which we look forward from year to year with the greatest interest. It is an extreme gratification to see that our chairman after his long years and experience in this great work, of which he is the honoured head, is still able to address us at this annual meeting, and I hope that for several years to come it will be the same. I had intended, Sir, just to add a word on one subject if I might for one or two moments, namely, the subject of coal. It is an important subject, and one that you have dealt with very fully, and one that you have laid great stress upon; it is one that I, personally, have had a great deal to do with, not in regard to making money out of it, but in helping other people to make money by it. And in regard to the question of whether coal is likely to fall in price from its present high level or otherwise—that is one that I have had to consider. I was asked by the head of a large firm of coal exporters some months ago, who were about to renew their contracts with the coal collieries, whether I thought that coal would rise or fall in price in the near future. I replied without hesitation that it will not fall, but that it certainly may rise, and that prophetic statement has been amply fulfilled; but I cannot go so far as to say that I look forward with expectation to a fall in the price of coal, and for two clear reasons—first, because we in the British Isles are rapidly working out our coal reserves. If I recollect aright, the amount of coal raised from our collieries last year amounted to 251 million tons, of which about 76 million tons were exported. We are working out our best seams and our shallowest seams, and the cost of getting coal is increased because of the increasing depth and cost of the machinery necessary to bring it to the surface. Beyond that the wages of the colliers are tending to rise from time to time, and, therefore, I do not believe that the price of coal will fall from its present high position, and I think you are justified in placing this surtax of 10 per cent. on the passenger traffic to meet that adverse state of affairs.

Mr. R. P. Langmore seconded the resolution, which was carried unanimously.

The Chairman, in reply: I am very grateful to Professor Hull for his kind remarks and his observations with regard to our services afloat, as well as to ourselves in the administrative department of the company's work. It has not been our custom in this company to move special votes of thanks to the officers of the company, but I venture to say that it has been one of those things that has always been elegantly understood. I am perfectly certain of this, and I have said it over and over again, that no company has been more loyally served than ourselves. The sentiments of zeal, and the desire to uphold the company's flag in every way, is absolutely and universally prevalent within the ranks of our service. With regard to the coal question, I am strongly in hopes that Professor Hull may prove to be wrong—(laughter)—but he is right so far that, with an advance in the last two years on Indian coal of 50 per cent., and an advance on Japanese coal of 50 per cent., and an advance on Welsh coal of heaven knows how much per cent., apart altogether from the fact that the general cost of material for all purposes of navigation has increased—there was only one course for the great lines sailing to and from the Far East to pursue, namely, to take the action which they did take.

The proceedings then terminated.

RUSSIAN PETROLEUM AND LIQUID FUEL.

A meeting of the holders of preference shares of the Russian Petroleum and Liquid Fuel Co., Limited, was held on Tuesday at Winchester House, E.C., for the purpose of considering a resolution empowering the board to apply from the investments of the preference shareholders' reserve fund any sum required, not exceeding £52,500, to the redemption of first debentures on or before January 1 next, upon the terms that any sum so borrowed should be replaced with 6 per cent. per annum in priority to any distribution on the ordinary shares. The Hon. Evelyn Hubbard, Chairman of the company, presided.

The Secretary (Mr. A. J. Milne, A.C.A.) read the notice convening the meeting.

The Chairman said that the directors were once more submitting the resolution dealing with the preference reserve fund, which failed to secure the requisite majority of three to one on the poll after the last meeting. Since that date the board had issued a fresh circular, again defining and insisting on the question at issue—the financial point pure and simple. The committee of the minority of preference shareholders had also issued another circular, which recurred to the question of their representation on the board, in addition to other subordinate matters, but suggested absolutely no solution of the financial difficulty as an alternative to that proposed by the board. The clause in the trust deed to which reference was made by the committee would not, as he was advised, prevent the debenture holders from applying at once for a receiver should default be made on the sinking fund. The solicitors of the company (Messrs. Ashurst, Morris, Crisp, and Co.) advised the board that if the company defaulted in meeting the debenture service at the due date the debenture trustees would be in a position at once to appoint a receiver. They added, in a letter which they had sent to the secretary, that the matter was so important that they had taken the opinion of experienced counsel upon it. The statement that the majority of independent shareholders had supported the committee appeared to him to be a somewhat daring misreading of facts. The number of proxies deposited by the committee confirmed his previous calculation—that they represented less than one-fifth of the total amount of share capital—and, under these circumstances, the directors considered that their offer to submit to the general body of shareholders two approved names from their party as directors was one that fully met the equities of the case. He understood, however, from the committee that their main object was to obtain independent and up-to-date information as to the actual position of the company and its management at Baku. To this the board raised no objection whatever. If Mr. Lever and his friends would nominate some recognised oil expert unconnected with this agitation, the board would be ready to approve of his being sent to Baku with full powers to investigate and report, and he would undertake that any suggestions which such an expert could make for the benefit of the company should receive immediate attention. It would, of course, be a condition that the agitation meanwhile should cease, and that no further

circulars should be issued pending the receipt of the expert's report. He hoped sincerely that, in consideration of the efforts the board was making to meet its critics halfway, they would consent to withdraw their objections and give it a unanimous vote on this very important resolution. Since the last meeting a large addition of proxies had been received from shareholders who previously had refrained from voting, and also a considerable number had transferred their proxies to the board out of those who had previously opposed the resolution. More than one of these expressly stated that they were convinced that the measure proposed was the only practical way of meeting the financial difficulty, and so had decided to support it while reserving their full right of criticism on other matters. There was one last consideration to which he would ask the shareholders to give due weight. The board was at the present time engaged on negotiations which had for their object the giving of the company an entirely fresh start on a new basis, including the bringing in of fresh technical knowledge as well as the provision of working capital adequate for thorough exploitation of the property. It would make all the difference in the world to the outcome of the negotiations whether the directors were enabled to speak as representatives of a going concern or whether they found themselves forced into the acceptance of any terms that might be proposed to avoid impending liquidation. He commended the resolution to their acceptance with all the emphasis at his command.

Mr. F. M. Ogilvy seconded the motion.

Mr. A. Levy Lever, M.P., said he came to the meeting with the idea of effecting a compromise with the board, having drawn out lines which he thought would be equitable to all parties, but from information which had now come to him he felt himself compelled to resist any settlement. He was prepared at the present moment to accept the suggestion of the chairman, providing he gave them a committee of investigation or a committee of an advisory nature. He had consulted financial people in the City, and they said it was practically impossible to raise any money with the board constituted as it was at present, but if they would get a fresh board, or the nucleus of a fresh board, there would be little or no difficulty in raising money on fair and equitable terms. All he and his friends wanted was a committee, but unless these terms were agreed to, he and his friends would have to demand a poll and record their votes against the resolution, and he hoped they would defeat it.

Mr. Lea Smith said the more he had considered the matter the more he considered it was the right thing for the preference shareholders to give up this money. In his opinion, if they did not do it they would find themselves in queer street on January 2. He was not a lawyer, and knew nothing about Russian law, but he believed that in the case of liquidation Russian law was very dangerous indeed. Personally, he thought that if they went into liquidation in Russia they stood a chance of losing their property altogether. The shareholders had better give up £52,000 rather than £152,000, and certainly the offer which the chairman had made for an independent expert to be sent out appeared to be the right thing to do. If his report was dead against the management, by all means let them deal with the matter, but they did not want a committee of investigation, for such committees did no good to any company.

Mr. Burke objected to the statement that the committee were simply wreckers. The directors had suggested that if the resolutions were not passed the business would go into the hands of the debenture holders. He would say that the sooner it did so the better, because the shareholders could not be worse off than they were at present. A trustee for the debenture holders would have no object whatever in wrecking the company: what he would want would be to get the interest upon his debentures and to get the company placed on a proper commercial basis, whereby both his capital and interest would be secured. The committee had no intention, in the first instance, of saying anything about seats on the board, but it had come to the conclusion that nothing but an absolute radical change from the highest to the lowest would ever redeem the company from the slough of despond in which it was at the present time. In further remarks he said that all a committee was asked for was in order that the shareholders might know the exact position of affairs, and if the directors would agree to a committee that would be an end of the agitation.

The Chairman said he was unable to reconcile Mr. Burke's statement that they had not sought seats on the board with the position they had taken up throughout this discussion. The first proposition contained in the committee's last letter was to the effect that they should be allowed to nominate four directors to seats on the board. He regretted that he could not meet Mr. Lever and his friends on the question of a committee. It had been clearly shown to the meeting by Mr. Burke that, rather than go on with the present board, he would prefer that the undertaking should be in the hands of a receiver. A receiver appointed on behalf of the debenture holders could at once take hold not only of £52,000, but of the whole £130,000. As he required working capital he would gradually use up the whole of it, and by failing to pass this resolution the preference shareholders would absolutely let any hold on that money pass out of their hands. If the vote were passed he thought the directors would probably be able to carry to a successful conclusion the negotiations to which he had already referred. If the vote went against the board they would still do their best. He did not mean to give up the cause of the company until it was absolutely hopeless, and it was not hopeless at present; indeed, he believed that if the shareholders passed this vote the directors would be able to pull it through. No advisory committee could be of value until they had obtained information as to the exact state of affairs in Baku. He was perfectly willing for an expert to go out, and when they received his report that would be the time to talk about the management. An advisory committee would simply be a hindrance to the directors until that report had been obtained. With regard to there being a difficulty in the case of liquidation in Russia, Mr. Lea Smith had been contradicted by a shareholder present. He did not know what experience that gentleman had had of Russian law, but he (the Chairman) happened to know personally what the procedure would be. It would be an extremely awkward matter for the future of the company if it went into liquidation in Russia. He hoped that whatever was done they would be very careful to preserve the unity of the company as a going concern in Russia. Any other course would be simply fatal to this company.

Mr. R. W. Shire asked whether any vote now given would in any way prejudice the rights of a preference shareholder against the board. He considered their conduct illegal in allowing the preference shareholders' fund to be in any way touched by the debenture holders. He had taken advice on the matter, and maintained that if the board had carried out their duties to the preference shareholders nobody could touch those funds, and if the preference shareholders gave this vote he believed it would simply whitewash any claim or redress they might have against the board personally.

Mr. Lever said it was his opinion that they would invalidate their rights if they passed the resolution. As to liquidation, it was altogether erroneous to suppose that the company would go into liquidation. He took it that in certain events a receiver might be appointed, but there was no question of liquidation.

The Solicitor (Mr. Stevenson) said that, speaking with a sense of his responsibility, he would say that whatever vote they passed it would not affect in the least degree their rights either as individuals or as a body against the board or any member of it.

Mr. Shire: Would the board give an undertaking to that effect?

The Solicitor: Certainly not.

The resolution on being put failed to secure, on a show of hands, the requisite three-fourths majority, whereupon the Chairman stated that a poll had been demanded and would be opened at once, to be continued during the following day (Wednesday), closing at 4 p.m.

The meeting then closed.

The result of the poll was announced on Thursday, as follows:—For the resolution, 278,219 votes; against, 91,481. The resolution was therefore declared carried by the necessary majority.

CAPE COPPER.

The twentieth ordinary general meeting of the Cape Copper Company, Limited, was held, on Wednesday, at the Cannon Street Hotel, E.C., Mr. John E. Champney presiding.

The Secretary (Mr. P. J. Franks) having read the notice convening the meeting and the auditors' report,

The Chairman said: It is very agreeable to us to be able once more to congratulate you upon having again broken the record. We have made a larger profit in the past year than in any preceding one. We have made a total profit of £379,910, which is £36,526 in excess of the previous year. But I have no hope of any further record profit. The abnormal inflation of prices has ceased, and, on the other hand, we shall have the competition of the numerous new mines which the higher prices have called into existence. We made this large profit notwithstanding that the costs show a nett increase of £21,485, the greater part of which (£14,253) was expended upon trial works, and £5,483 upon increased mining costs at Ookiep. On the other hand, the increased returns amount to £58,011, of which £35,842 represents the increased price obtained for our ores, and £20,893 the increased profit from Tilt Cove. The stocks of ore and metal show a decrease in value of £9,704, representing 193 tons of copper less this year than last. These stocks are all valued at cost price. There is again a decrease in the quantity returned from Ookiep of 3,204 tons, representing 280 tons of fine copper. From Nababeep a diminution of 475 tons of copper. On the other hand, we have an increase of 65 tons of copper from the trial mines. The general result of the whole is a nett decrease in the quantity of fine copper brought into the year's account of 695 tons, representing a money value of about £58,000. The reserves of ore at Ookiep have increased, being estimated now at 12,000 tons, against 6,000 tons in the previous year. At Nababeep there are 20,000 tons of ore more; but our chief mine agent has corrected his estimate of the assay value of the ore, as he now puts it at 5 per cent. instead of 6 per cent. as last year. This represents a nett decrease of 600 tons of copper estimated to be in the reserves. We have energetically continued explorations both in South Africa and elsewhere. At the former place work at Narrap has resulted in our obtaining 1,238 tons of 4 per cent. ore, which has been smelted along with the Ookiep ores; and but for the difficulty of transport, which will be overcome as soon as the aerial tramway is established, would have largely exceeded this quantity. In India we are working upon a property which we have under option for two years, and in America we are proposing to abandon a mine in Arizona, about which we are doubtful, after we have stoped out as much copper ore as we can get. In Mexico we are doing exploration work at two promising mines near together, from which we hope to obtain favourable results. You will receive in a few days a final dividend of 14s. per share, which, with the interim dividend, will make 10s. per share for the

year. We should have liked to pay the round figure of 15s. for the final dividend, thereby making 20s. for the year; but in view of the recent fall in the price of copper and the uncertain outlook of the market we thought it prudent not to do so. Before I conclude my remarks, I would call your attention to a subject which somewhat affects the future of this company. I allude to an enactment which passed the Cape Legislature in September last, by which the income-tax payable by this company in the Cape was doubled. The Act provides that all diamond mines and copper mines should be subject to a tax of 10 per cent., or 2s. in the £ upon their profits, provided those profits exceed £50,000 per annum. With 1s. in the £ which we pay in England, it will make a total of 3s. in the £, or 15 per cent. on our profits. This will fall very severely upon what threatens to be a worse year, and is in addition to the heavy taxation which we have to endure in the colony upon the importation of our stores, which amounted in the past year to the large sum of £5,478. With these remarks, gentlemen, I beg to move that the report and accounts as presented be received and adopted. (Applause.)

Mr Edmund A.Pontifex seconded the motion, which was unanimously adopted, and a resolution approving of the new articles having been agreed to, the proceedings terminated with a vote of thanks to the chairman, directors, and staff.

SAMUEL ALLSOPP AND SONS.

The annual general meeting of Samuel Allsopp and Sons, Limited, was held yesterday at Cannon Street Hotel, E.C., Mr. J. F. Remnant, M.P., chairman of the company, presiding.

The Secretary (Mr. J. Hartshorn) having read the notice convening the meeting and the auditors' report,

The Chairman, said the directors naturally felt a keen disappointment that the balance-sheet did not disclose a better result. As to the causes, the shareholders knew as well as he did that the responsibility for it could not be laid on the shoulders of the present board. With regard to his appearance in the chair, he could assure the shareholders that it was not of his own seeking. He intended to ask them—he would go further, and demand from them—that they should treat him and the board with the same confidence and frankness that the board intended to treat them. They were all partners in the same gigantic business, and unless they were all working together they could not look for a success. The directors meant to go forward, and wanted the shareholders to help them. Proceeding to go through the accounts, he said they had added to the item of business premises and plant a sum of £13,900, almost entirely due to a satisfactory increase in the liquor business. They hoped in future to add very largely to this. In the way of depreciation, they had reduced the total amount of their properties to £905,422, which was £10,000 more than last year. With regard to goodwill, neither the board nor the shareholders could be satisfied with the figure at which that stood. It looked hardly healthy, but they were not responsible for it. Then there were freehold and leasehold houses, which showed a decrease of £190,000 owing to properties realised. The suspense account was a very serious item, but it was as well to know what the worst was with regard to their unremunerative investments. They intended judiciously to dispose of them, and he hoped the shareholders would be satisfied with the result. With regard to the financial position of the company. If they took their 6 per cent. certificates, which stood at £247,000, and their mortgages, which stood at £73,000, with their interest accrued amounting to £49,000, and sundry trade accounts and loans, which together amounted to £555,000, they got a total of £926,000 as total liabilities outside their debenture stock and their capital. If they put against that, on the other side, stocks in hand £541,000, debts due from customers £401,000, and the service fund, trust certificates and cash at bankers, they would find that, at all events as regarded their immediate liabilities, they had money to cover them. The balance-sheet disclosed three principal unsatisfactory items. They had got an accumulated revenue deficit of a large amount. They had a goodwill of a big amount, and they had also got for the first time a suspense account, which, in his opinion, would have to be added to considerably before they were in a position to reduce it. With those three items staring them in the face, no balance-sheet could be said to be a healthy balance-sheet. It might be that in the near future they might deem it prudent to devise some plan for readjusting the balance-sheet and putting it on a healthy basis, and they would not hesitate to call the shareholders together if they thought it necessary to lay before them the best scheme that could be devised. In the immediate future, they had to devote their attention to seeing what assured nett revenue they had to rely upon and work upon. They had a hard fight and a long fight, but with the goodwill of the shareholders they would get through it. Another important item was that the board was absolutely united, and no jeers nor criticisms would have the smallest effect upon them. Behind the board was a splendid staff of loyal and devoted officials, and he appealed to the shareholders to do their part.

Mr. W. Gardner Sinclair, the managing director, seconded the resolution, and after some lengthy criticisms from shareholders, it was carried unanimously.

The new directors were confirmed and the retiring directors were re-elected, and the proceedings terminated with a vote of thanks to the chairman.

DAGGAFONTEIN GOLD

The sixth ordinary general meeting of the shareholders of Daggafontein Gold Mining Company, Limited, was held on Tuesday, at the offices, 3 Gracechurch Street, E.C., Mr. J. C. A. Henderson, chairman of the company, presiding.

The secretary (Mr. W. L. Castleden) having read the notice convening the meeting and the report of the auditors,

The Chairman said: In moving the adoption of the report and accounts to June 30th last, as presented, I can only say that the latter are so simple that I need hardly make any comment upon them at all. There is again a debit to profit and loss account, but, of course, this is only to be expected while we are simply carrying out exploratory operations. During the year we have spent some £6,300 upon boring operations, and I consider the results met with in this direction are highly gratifying. Our income has been somewhat less during the past year than it was for 1906, but, on the other hand, we have succeeded in slightly reducing our working expenses. As stated in the report, the No. 7 borehole has been steadily continued and had, on November 16th, attained a depth of 2,905 ft. It is exceedingly satisfactory to note the values we have obtained in the Kimberley Reef, where encountered, giving as much as 1 oz. 11 dwts. 6 grs. over 2.5 ins. in the No. 5 boring, which to a great extent corroborates the values we obtained in the No. 3 and No. 7 borings, which were respectively 19 dwts. over 8.5 ins. and 18 dwts. over 7 ins. It is interesting to note the results of the operations carried out by our neighbours, the Geduld Proprietary. The values they have obtained are satisfactory, and the recommendation of their consulting engineer to start blocking out has, I understand, been adopted by the directors. Another fact of importance is that owing to the flatness of the reef stoping can be started not only from the rises, but from the drives, and it is thought that thereby a comparatively larger area can be opened out in a comparatively short time than with a steeper angle of reef. As I have already informed you, since the end of the financial year we have been advised that the Kimberley reef has been struck in No. 7 borehole measuring 7 ins. in thickness, assaying 18 dwts. Drilling is being continued in the lower series, where progress is satisfactory. We understand that the new Gold Law will be dealt with in the ensuing session of the Transvaal Legislature. This is a matter of great importance to us, as until we know its provisions we are unable to make a choice as to the position of our mynpacht. Then, again, the labour question is one of the greatest importance to us, though I hope that by the time we are in a position to require large quantities of native labour, this vital question will be satisfactorily settled, and matters working smoothly. You are fully aware of the change that is now taking place in the unskilled labour market, and that mines which until lately have been worked by Chinese (who speedily became expert in the work) are now to be handed over to unskilled Kaffirs. I say nothing as to the wisdom of this step, because we have to accept it whether we like it or not. I only hope the mines will find no difficulty in obtaining all the labour they require, and that the question will be settled once for all. Of great value to us is the fact that working costs have been generally reduced, showing, on the whole, better economic conditions. I now move the adoption of the report and accounts as presented.

Mr. W. Bryson Butler seconded the motion, which was unanimously adopted without further comment.

Mr. Hermann Landau, in seconding the re-election of Mr. R. C. Richards, said: We have luckily now reached a period when the capricious views of a few so-called statesmen will no longer be of any avail in stemming the tide of progress in the Transvaal. The people who are now ruling there are the people themselves. They see that the prosperity of the Transvaal can only be maintained if the resources of that country are developed, and developed vigorously. Gold is the principal resource the Transvaal possesses, and everything possible should be done to encourage capital to flow thither for the development of that great natural wealth. (Applause.)

LONDON AND RIVER PLATE BANK.

The 45th ordinary meeting of the London and River Plate Bank, Limited, was held on Tuesday at River Plate House, E.C., Mr. Thomas S. Richardson (Chairman of the company) presiding.

The Secretary (Mr. George R. Hutchinson) having read the notice convening the meeting and the auditors' report,

The Chairman expressed his belief that the report was the best which the directors had ever been able to present to the shareholders. The principal business of the company was in the Argentine Republic, and therefore when the Argentines were prosperous the bank was prosperous too. The directors' anticipations at the last meeting with reference to the wheat and the linseed harvests were realised. Crops were large, with the result that all the producers were well off, and every one was prosperous, and a considerable profit was consequently made by the bank's managers there. With respect to their operations in Uruguay, their branch at Montevideo had done very well, and, like the Buenos Ayres sub-branches, the agencies in connection with the Montevideo branch had all done better, more or less, than they did in the previous year. All the bank's branches at Brazil, too, had done fairly well. They did not do as large a business in Brazil as in the Argentine, but the branches there were of considerable assistance to those in the Argentine Republic, and altogether were a very decided assistance to the general business. Besides that they had hitherto done a large exchange business, although less was done this

year than usual owing to the Government's arrangements for assisting the coffee producers. In spite of that the branches there had all done well, and had all yielded their quota of profit, and in excess of what they did the year before, with the exception of one branch. At the last meeting he mentioned that the company had established a branch in Chile, which they had been almost forced to do. They had engaged premises and a manager before the earthquake, but, of course, they did no business until long afterwards. The branch was opened in January last. They had to place some money there when the exchange was between 12d. and 13d. Owing, however, to the crisis in Chile, the exchange had fallen, and it was at 9d. when the directors' report was issued. They had, therefore, had a serious loss to face, but it had all been dealt with, and had been debited to the year's working. Owing also to the crisis in the United States very nearly all securities had considerably fallen in value. The directors had, therefore, written down the bank's Consols to 80, and their other Government securities in proportion, and the whole amount had been debited to profit and loss account. He concluded by moving the adoption of the report.

Mr. E. E. Reade seconded the motion.

In answer to a question, the Chairman stated that the directors received advices on the previous day from Buenos Ayres informing them that the crop prospects were hardly ever better, and that the wheat harvest and the linseed harvest might be considered secure. It was too early to speak of the maize crop.

The motion was unanimously adopted.

STOCK CONVERSION AND INVESTMENT TRUST.

An extraordinary general meeting of the Stock Conversion and Investment Trust, Limited, was held on Thursday at Winchester House, E.C., the Marquis of Tweeddale, Chairman of the company, presiding, for the purpose of submitting resolutions providing for the reorganisation of the company's capital.

The Secretary (Mr. William Spens) read the notice convening the meeting.

The Chairman said: As you are aware, our policy has been to place our money in well-secured stocks. It is common knowledge that stocks of that class have fallen heavily, and, after most careful and prolonged consideration, we have deemed it our duty to take the necessary steps to adjust our capital to this condition of affairs and thus to recover the earning power of the company. Our plan is to adjust our capital, but at the same time to create an annuity in respect to the capital proposed to be written off, in recognition of the fact that the capital will, in our opinion, be ultimately recovered. It may be urged that we should suspend dividends and await the recovery of capital values. This we do not hold to be in the best interests of the shareholders, who, I may mention, number some 1,300. They have treated our shares as pure investments, and in our view it is incumbent upon us to see that they should continue to be regarded as of this character. This, I need hardly point out, depends upon our affairs being so arranged that we should continue to be able to pay regular dividends. Another criticism that might be made is that it would be easier for us and as satisfactory for the shareholders if the annuity proposal were dropped altogether, even if the capital be written down as proposed. Of course, this might facilitate good results. But what we have felt is that our depreciation is so totally different to that which many companies have had to meet, when their capital has been really lost, that to adopt the common remedy for that evil would be unfair to the shareholders of our company. For we are quite willing to be judged in the future, not by the dividend which we pay upon the annuity shares, but by the general results to the reconstructed ordinary capital. I do not think the position of the preference shares will be at all impaired. On the whole, we can confidently recommend our proposals to the shareholders of every class. I beg to move the resolutions of which notice has been given.

Mr. A. A. Brand seconded the resolutions.

Mr. Nathanial Spens, in reply to Mr. Webb, said it was the intention of the board to place to and keep in reserve an amount equal to the capital now proposed to be written off, subject to that reserve being as before liable for any losses the company might make under the provisions of the new Companies Act, which would come into force in July next, it would be perfectly competent for the annuity holders, and ordinary shareholders, if they found that the scheme now promulgated was not good, to reconsider the position.

The resolutions were carried unanimously, and at separate meetings of ordinary stockholders and ordinary shareholders resolutions were passed, sanctioning the proposed modifications in their respective rights and privileges. The meeting of the preference stockholders was adjourned for a week in the absence of the necessary quorum.

We are requested by Mr. Lionel W. Harris, of Warnford Court, to state that he is not connected in any way with the firm of Burdett and Harris, who were to-day declared defaulters on the Stock Exchange.

LONDON CITY AND MIDLAND BANK.—The statement for period to November 21 showed current, deposit and other accounts of £52,474,828, and acceptances on account of customers £3,985,699 against assets consisting of cash in hand and at Bank of England £10,386,781, money at call and short notice £6,303,897, investments £6,667,264, bills of exchange £5,217,632, and advances on current accounts, &c., £28,965,864.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1907, and December 7, 1907 —

REVENUE AND OTHER RECEIPTS.

—	Estimate for the year 1907-1908	Total Receipts into the Exchequer from April 1, 1907 to Dec. 7, 1907	Total Receipts into the Exchequer from April 1, 1906, to Dec. 8 1906
Balances, April 1:	£	£	£
Bank of England	—	5,807,721	9,334,212
Bank of Ireland	—	1,124,702	1,117,275

Bank of Ireland	668,665	638,878
	2,395,908	3,280,485
Total	106,063,883	107,764,292

NOTE.—The Revenue and Expenditure figures for 1907-8 have been adjusted to give effect to Section 17 (5) of the Finance Act, 1907 (7 Ed. VII., cap. 13), with respect to Local Taxation Grants, and the figures for 1906-7 have been similarly adjusted for the purpose of comparison.

MEM.—Treasury Bills outstanding on December 7, 1907:—

Bills issued by Public Tender	£13,213,000
Bills otherwise issued	2,500,000
Treasury, December 10, 1907 Total	£15,713,000

LEWIS AND BURROWS, LIMITED.

Although this company did rather better during the twelve months ended September 30 the results were nothing to boast about when it is remembered that it possesses no fewer than 24 shops. Gross profits from all sources were £1,252 up at £5,757 and after meeting administration charges, providing £822 for depreciation and writing £280 off repairs and improvements account the surplus was £3,506 or £1,195 more. Only £42 was brought forward giving a total of £3,548 against £2,466 and the directors promptly proceed to pay a dividend of 3 per cent. on the ordinary shares compared with 1½ per cent. a year ago. The nett amount written off capital account is no more than £36, leaving the outlay at £60,044, and against this the only reserve is the small one of £4,643, or, say, 7 per cent., so that there is still considerable room for improvement. Liabilities to sundry creditors are £601 down at £7,300, but stocks show an increase of £456 at £21,987, debtors owe £927 and cash comes to £3,778 or £1,077 more. The £1,088 nominal of India stock held has further depreciated and is now down to £1,287 while £214 of the repairs and improvements account remains to be written off.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XX.—No. 520. New Series. SATURDAY, DECEMBER 21, 1907. (Registered as a Newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first; its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHERS' NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **16s. 6d.,** or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,

"Investors' Review" Office,

Norfolk House, Norfolk Street,

London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

Great Northern and Great Central Fusion.

After much heralding the outlines of a working agreement between the Great Northern and Great Central companies made its appearance last Friday evening too late to be dealt with in the INVESTORS' REVIEW. Nothing is lost by the delay, especially as the event is one that may have remarkable consequences for railway proprietors and the public—one, therefore, which deserves to be examined carefully and from many sides. Briefly the agreement, which has been made feasible under the Great Northern and Manchester, Sheffield and Lincolnshire Railway Companies' Act of 1858, has for purpose a consolidation of the two properties which will henceforth be worked as one after the manner of the South-Eastern and Chatham Companies, with certain exceptions such as the Lancashire, Derbyshire and East Coast Railway and the Sheffield District Railway. The boards of the two companies are to form a first joint committee of control and the nett proceeds are to be divided on the basis of last year's income. The nett receipts for the two companies were last year £3,803,332, of which the Great Northern yielded £2,168,303 and the Great Central £1,635,029. In round figures, this gives a proportion of 57 per cent. of the total to the Great Northern and 43 per cent. to the Great Central. On this narrow foundation the contract is to be completed and 3½ per cent. interest is to be first of all allowed on the duly authorised capital expended, or to be expended, by the companies as from January 1 in the current year. In addition the Great Central Company is to be allowed £100,000 per annum in respect of the capital expenditure by it on certain new lines and works which had not fructified last year. The residue of the nett receipts after these payments have been made is to be divided between the two companies down to and including the year 1910 in the proportion of 57 per cent. to the Great Northern and 43 per cent. to the Great Central. After 1910 and down to and including 1912 50½ per cent. is to go to the Great Northern and 43½ per cent. to the Great Central, and beyond 1912 the Great Northern proportion is to fall to 50 per cent. and the Great Central one to rise to 44 per cent. This agreement is to come into operation as soon as it has received the approval of the proprietors of each company and of the Railway and Canal Commissioners.

Obviously there is a great deal more to be explained before the reasons for this compact can be fully grasped, and we are not surprised that the Stock Exchange speculators who had bought Great Northern deferred stock on the rumours of what was coming began to sell when the actual statement came out. Under its old name, the Manchester, Sheffield, and Lincolnshire Railway, the Great Central Company was from the first in great measure a bankrupt, or always tending to become a bankrupt, undertaking. We never remember it to have shown a really healthy financial position in the whole course of its history, and the market nickname given to the company, founded upon the initials of its former title was "Money Sunk and Lost." That jibing phrase indicated not unfairly the position of the company when its capital expenditure was £25,000,000 less than it is to-day; before it had

joined in the struggle to compete with the Midland and North-Western Companies for Lancashire traffic, and before Sir Edward Watkin's disastrous scheme for an extension to London had been even thought of. The company is in no better position to-day after all the additional millions squandered by it, and that makes it all the more difficult to understand why the Great Northern, which has had a more prosperous career should have been ready to enter into a compact of the kind now officially outlined. Is it because there also capital expenditure, undertaken without discretion or stint, has brought about a dangerous situation? Has the Great Northern Railway, in other words, seen its best days, and has the prospect now ahead of it made its board willing to take up the charge of an insolvent neighbour in the hope that two emptying sacks may stand upright better than one? The Great Northern also has been a conspicuous sinner in the matter of capital outlay, so much so that the present capital obligations of the two companies together, including their subscriptions to other lines and their joint undertakings, do not fall much short of £130,000,000 even after ruling out market-inspired duplications of the ordinary stocks. The Great Northern has also sunk between £5,000,000 and £10,000,000—the exact figure cannot be ascertained—in the effort to fight for Manchester and Liverpool traffic against the Midland and North-Western Companies. It is thus, so far as that part of the country is concerned, in the same boat with the Great Central, and if we add in the Great Central Company's enormous waste of money on Grimsby as well as its adventures in connection with the Great Western Company, it is easy to see that a position of the greatest danger may exist for both companies. On June 30 last the Great Central Company owed the Great Western £1,151,000, and we do not know yet what it may have borrowed with that company's assistance during the current six months. Its floating debt on Lloyd's bonds at the same date amounted to £942,000 and it owed £300,000 at that date to a rolling stock trust. In addition to this the savings bank and pension fund moneys in its hands—all buried in the capital account—came to £908,000, so that the floating debt of the company was then £3,350,000 and its demands for more money are always insatiable. So much is this the case that in dealing with its latest report we pointed out that a readjustment of the capital account involving large fresh creations of stock was inevitable. And the readjustment might come to mean a writing down.

Fresh creations of stock, however, are not possible in present circumstances for the Great Central or for any British railway company, at any rate, not possible in large amounts. And the Great Northern would probably find as much difficulty in raising a couple of millions as the Great Central or Great Western, except upon terms which would seem to its board extremely burdensome. This being so these two companies have decided to fuse interests and to become one concern, if the Government or the Railway Commissioners and their shareholders permit them. By doing this it is to be presumed working expenditure will be reduced. The duplication of trains between London and the North ought to be put an end to, and also, we should imagine, the building of such lines as that Banbury joint line which can be of no nett revenue value whatever to the Great Central system whatever it may be to the Great Western. Competition will be at an end, and the construction of spurs in order to fight for traffic which altogether is not big enough to go round, and rivalries of all kinds will be at an end. It will no longer be necessary to run empty trains from Marylebone to Manchester, and that station may be used as a relief to the overcrowded terminus of the Great Northern at King's Cross. Many benefits can thus be reckoned upon, and so long as the capital expenditure is curtailed or altogether ended the result ought to be fruitful of good both to stockholders and the public, although we do not think the bargain as it stands a particularly favourable one for Great Northern stockholders. It seems to us that too much is being given to the Great Central. The basis of comparison is too narrow and arbitrary. This, however, may not be the view of the Great Central proprietors, seeing that in the first half of the current year their company showed an increase of nearly £56,000 in its nett income compared with the first half of last year, while the increase in the Great Northern receipts was only £46,000, but that also is too narrow a foundation on which to rest a reliable judgment, and looking at the position of the two roads, at the weakness of the Great Central so far as the metropolitan traffic is concerned, and at the unprofitableness of its cross-country traffic in the North, we cannot avoid the fear that its stockholders are getting better treatment than they deserve. However, even this may not matter much in the long run, provided the joint committee proceeds to overhaul the whole method of conducting traffic. It is surely time to put an end to the happy-go-lucky, rough-and-tumble system under which both goods and passenger business is carried on in this country. Scientific ordering ought to be aimed at, and if along with this we have a closing of the capital account together with a commonsense revision of the scale of passenger fares and goods charges, it is probable enough that stockholders in both companies may in the long run have no cause whatever to regret this fusion. There are many "ifs" though.

Tanganyika Concessions and Zambesia Exploring.

It took us something like two hours to wade through the mass of literature with which the shareholders of the Tanganyika Concessions have just been furnished, and at the end of our labours we were sensible to a feeling of keen disappointment. The future of the undertaking seems to be almost beyond the imagination of mortal men to conceive, and we cannot picture this undoubtedly great concern becoming a true profit-earning enterprise within a prospective period that most of us would care to bring before the mind. Immeasurably the most important document now placed in front of us is a letter of instruction from Mr. Robert Williams, of Robert Williams and Co., the company's managers and engineers, to Mr. Allen Gibb, who has gone out to Katanga as the head engineer. We can touch upon it only in the briefest way, but the points to be brought forward will suffice to show the colossal work the undertaking has to face before the stupendous copper deposits and other wealth, dazzling to a stupefying degree, can be turned into profits sufficient to justify not only the present price of the shares, £2¼, not only the price existing when that unfortunate convertible debenture issue was made last year, £7, but also the figures paid by many an unfortunate holder who failed to realise that the shares were being rigged at the time they were hoisted to £28 apiece. Although the company favours us with such a mass of light Christmas reading, there is one very important omission. Everyone interested in the fortunes of the venture in even the slightest degree is aware that early in the present year Mr. Frecheville went to the company's mines on behalf of the Consolidated Mines Selection Company, for the purpose of making an independent report. In the letter just mentioned, Mr. Williams refers to this visit, and goes on to remark that "We encourage every independent engineer of good reputation to visit these mines, as the more widely their real value is known the easier it will be for us to finance our railway construction and other works." That makes cheering reading, and at the time Mr. Williams' letter was written Mr. Frecheville was still at the mines, so that he could not be aware of the conclusion arrived at. We are in ignorance of them still, but Mr. Frecheville is back in England now—has been for some time—and ever since his return adverse rumours have been current as to the nature of the report he has made. In the circumstances, would it not have been wise to make

arrangements for its publication to the shareholders? We are told that many people have seen it, and we greatly fear that the steady dip, dip in the shares tells its own tale.

"We have now arrived at the stage when we have to make money," says Mr. Williams in his letter to Mr. Gibb, "and we look to you to be the man who will guide us in the most economic method of producing metals to pay as soon as possible." But the Benguella Railway cannot be finished for close on four years yet, and we must refer the reader to a statement in the directors' report to the effect that wagons with 50 tons of stores, machinery, and trading goods left Benguella on May 26 for Katanga. This expedition is due to arrive at that place about the end of this month, and it is proposed to bring back 50 tons of copper and tin on the return journey. Just imagine, six months from Benguella to Katanga, and try to realise the difficulties the company has at present to contend against. What does this transport cost and what profit can be realised on those few tons of metal, with copper a long way under £60 a ton? And it may be worse when the stuff arrives some time in 1908. Once again we are blinded with the wealth exposed at Katanga. £200,000,000 of copper, at £100 per ton mark you; but shareholders will not mind halving the amount if they can get hold of that much; large quantities of barren fluxes in iron and dolomitic limestone exist all over the country, and sometimes close to the mines; besides £4,000,000 of tin, and so we pass to the Ruwe Gold Mine, which is certainly producing—coal and diamonds. Up to the present two small diamonds have been discovered, and in the present state of the diamond market it does not seem worth while to look for any more. "I consider that our copper deposits are so extensive, and present such a field for investigation that, a large fortune might easily be wasted in scattered work, and that our best plan is to concentrate our efforts on the great Kambove mine, where a great copper ore quarrying proposition, with large bodies of fluxes lying close to it, presents itself as being probably the position to start producing, and work gradually up to a great scale to supply a great smelter, to be erected where found most suitable. The product from Kambove can be reinforced by ores from other mines as may be found suitable." All is thus "great" except the revenue!

Mr. Gibb is going to be a very busy man, and in due course the Kansanshi mine, the Kolnezi and the Ruwe gold mines must all be visited, and in the case of the last named thoroughly investigated. A cable regarding the Kansanshi mine has already been received from Mr. Gibb, but he is not desperately enthusiastic, is evidently inclined to wait for developments, and "doubts whether we shall be able to cope with the water" that has filled the crosscut. In the directors' report it is declared that satisfactory progress is being made with the all important Benguella Railway, and Mr. Williams lets us know it will be constructed over the first 200 miles of rough country and up to a height of 5,000 ft. above sea level to the level plateau by the end of next year, after which rapid progress can be made. Negotiations for the construction of the Rhodesian Railway to the Kansanshi Mine have been in progress for several years. "It is mainly a question of the Rhodesian Railway Company arranging finance," Mr. Williams observes somewhat naively, "which again depends upon what traffic we can give that line from Kansanshi mine until the Benguella railway can be constructed to the mines," which is a nice way of saying that the Rhodesian railway extension will never be built. And note, in passing, that at the present time the transport of metals from Katanga to Lobito Bay (western route) is £45 per ton, and from the Kansanshi mine to the railroad of the Southern Railway £30 per ton. Truly a ruinous state of affairs.

Except in the matter of technicalities, Mr. Gibbs' reply to Mr. Williams' letter does not carry us very much further, but the shareholder with time on his hands can proceed to study the report of the Union Minière du Haut Katanga; Mr. A. J. Fraser's report on the Star of the Congo Mine; Mr. F. E. Sturtt's report on analyses of ores of Star of the Congo mine; the latter gentleman's report on Kasopi River borehole; an extract from the Katanga Railway Company's report, and the report and statement of accounts of the Benguella Railway. All this accomplished there are sundry maps to be looked at, and then it may be useful to return to the directors' report and accounts for two years to June 30, 1907. The arrangements referred to in sundry circulars issued during the second half of 1906 and at the meeting held in October of that year for the transfer of all the Katanga mines to a company to be registered under the laws of the Congo have been carried out, the enterprise being the above-named Union Minière du Haut Katanga, in whose report there is nothing worthy of special mention, although the Tanganyika directors observe that the reports to date on the progress of the works are all of a satisfactory nature, and the results obtained fully justify their expectations. The company holds a 40 per cent. interest in the Katanga Railway, and the extract from the last report refers to the transport business from the Katanga mines, and points out that the Benguella will be the shortest route to serve Katanga.

We think this is all that need be said regarding the actual business, and it now only remains to make a few remarks about the accounts. The share capital paid up out of the million authorised is £537,994, and the £2,000,000 of debentures which have given rise to so much discussion are paid up to the amount of £759,621, or were at the date of the accounts. Share premiums can be referred to when dealing with the profit and loss account, and sundry creditors include £124,000, an amount advanced by a third party to be satisfied in terms of settlement of litigation, and £50,000 due to the debenture-holders for interest, to be satisfied by further debentures in accordance with the terms of issue. These debentures are convertible into shares at £8 apiece at any time up to December 31, 1911, and there are other options at £10 and £4 per share, but whether any of them will be exercised the future alone can decide. The aggregate of the balance-sheet is £2,100,092, and of this on the assets side no less than £1,166,625 consists of shares in La Companhia do Caminho de Ferro de Benguella (the Benguella Railway), besides a further £136,279 on account of expenditure for and advances to the same company, since satisfied in shares. In the Katanga Mineral Company the holding is £194,550 and 51,353 fully-paid £1 shares, and 19,996 shares on which 1s. has been paid in the North Zambesia Company are taken in at £2,013, which is probably more than their worth. Properties in Northern Rhodesia and expenditures to date account for £161,519, and the free cash balance is £94,409, aside from £214,370 partly earmarked for railway construction. Taking the amounts as set forth we find that in the two years to the end of June the revenue under all heads was £12,207, and the outgo £71,115, including debenture interest of £50,000, so there is a deficiency of £58,908. This is charged to share premium account, together with underwriting commission on debentures £100,000, and certain taxes and fees £5,441, reducing the account to £385,172.

The report of the allied Zambesia Exploring Company is a very brief and unimportant affair measured against the ponderous tomes issued by the Tanganyika Concessions. One mine has been let on tribute, and an option or so has been secured, one over a coal area situate about 45 miles east of Kafue bridge and another for two years upon two farms adjoining, and on the line with the Roberts Victor Diamond Mine. The revenue account shows an income of £7,374, including profit on realisation of shares £5,512, and after meeting ordinary outgo and reserving £1,500 for doubtful debts, the balance remaining of £6,457 is written off sundry shares of other companies which have heavily depreciated during the year. Nothing is said of these having been brought down to market value and the value of the shares held and details given in the Tanganyika Concessions has not been touched because

the directors believe they are well worth their balance-sheet figure. It may be so, but the general effect produced is, as we have hinted, one of melancholy.

Economic and Financial Notes.

That "All-Red Ruin Route" Again.

He must be a witty fellow the writer of that leader on this most impudent of boodlers' promotions, which appeared in Wednesday's *Times*. His performance is quite as good as that of Balaam's ass, the other way about. He came to bless, and succeeds in damning with telling effect. An "All-Red" mailship route is demanded by the well-known and Right Hon. Sir J. G. Ward, Premier of New Zealand, necromancer in oats and bank balancings, and by the Hon. Clifford Sifton, an ex-Minister of Canada, a gentleman of whom we never heard till last week, as well as by sundry other individuals more or less great, glorious or hungry; therefore it ought to be established, this writer says, in spite of the opposition of men like Sir Thomas Sutherland or Sir Thomas Shaughnessy, whom we know, and no attention ought to be paid to the interests which might be hurt by its competition. Doubtless there are "problems" to solve, and important shipping firms, "even if not rivals of this route" that is to be when boodle is king, "might conceivably find grave objections to an expense possibly detrimental to their interests, and to which they would have to contribute." But what of that when Sir Joseph Ward says New Zealand must have this one last boon or cut the painter? Is it not true also that sometimes as many as 4,000 Canadians come to England for their Christmas holidays, let alone those who come home to starve? Revenue? Who talks of revenue when a great Imperial enterprise has to be furthered to the profit of so many ardent and dollarless patriots? A total annual subsidy "for at least a period of years," the writer informs us, may have to be paid. It would amount to "from £700,000 to £800,000 or even more," and of this amount "nearly one-half" would have to be contributed by the taxpayers of the United Kingdom. But they cannot possibly grumble at this, pillars of empire as they are by whom the augmenting burden of maintaining the glory of our dominion is counted as nothing. Only there is just one item in this gravely catalogued but very funny list of wants which might prove a slight stumbling block in present circumstances. It has been calculated, this humorous writer tells us, that a fleet of four ships at 24 knots for the Atlantic service and of five at 18 knots for the Pacific service would cost something like £6,000,000 to build, and "probably this amount could not be raised at a low rate of interest without, as in the case of the two Cunarders, engaging the credit of the British Government"—which, by the way, is not at the moment good for a great deal. No, it certainly could not, not even by help of the Right Hon. Sir Joseph, and there's the rub. Will our present Ministry commit the country to a 4 or 4½ per cent. guarantee for an outlay of this magnitude and in present circumstances? Possibly, it might. There is no knowing, for some of the Cabinet are men who see visions of coming invasion and disaster fully as vivid as any conjured up by their predecessors, to the promotion of premature baldness. But will Parliament and the nation tolerate an imposition of this description in the hard times now upon us? We think not, and therefore thank the writer of this article for having so adroitly brought out the leading facts tending to discredit this dishonestly conceived project. It needs nothing more than a careful perusal of his article to damn the project altogether, and damned it will be. Not even war-demi-god Haldane dare turn on the everflowing torrent of his wordiness in support of it.

Underground Electric Railways Company of London.

The dominant note of this report dated the 10th inst. is hope deferred, and we regret that the opportunity was not taken to give a brief survey of the actual position of the various properties in which the company is so deeply interested. In regard to the Chelsea power house, we are, indeed, informed that the average output is now about 100,000,000 units per annum, which are sold at a price yielding a satisfactory profit to the company, while also low enough to satisfy the railway companies. That is good, but we should have liked to see the figures, and the same observation applies to the various tube railways mentioned in the report. It is very interesting to note that the Great Northern, Piccadilly and Brompton Railway was opened on December 15 last by Mr. Lloyd George and that the same Rt. Hon. gentleman performed a similar ceremony for the Charing Cross, Euston and Hampstead Railway on June 22 last, but there are other interests even deeper. We are also informed that the receipts of the last-named line are now about £2,900 per week, but why not have given us a summary of the receipts and expenditure on all these railways? It is no doubt true that they issue separate reports, but it would have been a convenience to have the whole brought together in the report of the owning company, and the exhibit would have been of great value in helping holders of profit-sharing notes and of the share capital to form some idea about future prospects. The receipts of the "Bakerloo" tube show an increase of about 20 per cent. in the mileage receipts this year over last, and "the directors have every reason to believe that the increase will continue;" which is excellent news, and we trust the same is true of them all, only we want to know what the nett earnings come to. Perhaps, however, the newness of the various systems has prevented the directors from going into any details on this occasion, and we therefore hope that next year this omission may be made good. As we pointed out when dealing with the report twelve months ago, a nett income of about £600,000 per annum must be furnished by these various properties if the business is to pay the shareholders. How far have they got towards this desirable goal?

Amongst other items of information we are told that the Wimbledon extension of the London United Tramways Company has been completed, and that it is now in operation "with increasingly favourable results, though sufficient time has not yet elapsed for the tramway company to derive the full benefit which must ultimately accrue from new construction and development." A vague comfort that, but we shall hope for better things next time. We are also told that Mr. Albert H. Stanley, until recently general manager of the Public Service Corporation of the State of New Jersey, a railway company which works about 300 route miles of urban and suburban street railways in that State, is now the general manager of the Underground Electric Railways Company, that is to say of the District and the three tube companies. Already the service on the District line has been improved and quickened, and no doubt homogeneous control will have a valuable influence in improving the outlook for the other lines.

Not much change has taken place in the balance-sheet, but we regret to see a further depreciation of £21,000 in the company's preliminary deposit investments, which cost it £198,933. The market value on June 30 last was only £177,360. The power house and transmission line, &c., enterprise at Chelsea has cost £1,306,356, and the company has invested £2,805,890 in stocks and shares, that being the cost price. There is also an item of £13,065,083 set against cost of railway construction and expenditure chargeable to various construction contracts, including general expenses and all interest paid and accrued less income from investments and from Chelsea power house. We hope this large item will be set forth in greater detail next year. Then there is a discount of £280,000 on profit-sharing secured notes which were offered at 96. Sundry debtors, debit balances, stores, &c., are down for £179,400, and cash at bankers, at short call and in hand amounts to £122,955, so that

the company is by no means without funds for current uses. Its liabilities, however, are heavy enough, the profit-sharing notes outstanding amounting to £7,000,000 as against a share capital of £4,834,125. Then £1,075,000 of debentures have been issued on the power house undertaking—viz., £775,000 out of £850,000 authorised in 4½ per cent. first debentures and £300,000 out of £600,000 authorised in 4½ per cent. second debentures. These second debentures, however, have been pledged along with other stocks, shares and Parliamentary deposits for loans amounting to £1,234,294, in addition to which there is an indeterminate item including sundry creditors of £350,906, which also appears to represent borrowings, at least to some extent, and £3,723,291 is the nett amount realised to date on the sale of stocks and shares and cash received on account of construction contracts. Adding the £41,002 of a depreciation reserve on account of the Chelsea power house, the total of the balance-sheet is £17,958,618, exclusive of unspecified contingent liabilities in respect of construction contracts. In regard to the profit-sharing notes the information is repeated which was mentioned in these columns some weeks ago to the effect that Messrs. Speyer, pending the elaboration of a plan for dealing with these notes which become due on June 1, 1908, have decided to purchase the coupons that fell due on the 1st inst. at their face value. They will no doubt be recouped for this outlay, but the action is none the less honourable and creditable to them. All the more do we wish that they may soon be able to see substantial fruits accruing, not only to the holders of the notes, but to all concerned in these enterprises.

Great Western Railway Finance.

We have not for a long time read a more instructive or carefully put together article than the one written by Mr. W. J. Stevens on the Great Western Railway in the latest number of the *Financial Review of Reviews*. Mr. Stevens has long been known to us as one of our most careful and well-informed writers upon Home Railway finance, and in this article he selects the Great Western as offering a striking example of "British railway extravagance." A general idea of this extravagance has been acquired by casual observers and readers of The Investors' Review during recent years, but the facts relating to one particular company have never been brought together with the force and conclusiveness shown in this article. Mr. Stevens brings before us a picture of reckless waste hardly to be paralleled even in the United States. The board would seem to be possessed of the spirit of the "Jubilee Plunger," and to spend for the glory of spending. According to the writer, the great aim of the Great Western management has been to duplicate the existing system wherever it seemed necessary to facilitate the running of mile-a-minute expresses to the extremities thereof. To attain this end and also to enter into competition with the North-Western for the traffic of the South of Ireland, as well as to encourage neighbouring lines to assume a destructively competitive attitude towards their immediate rivals, or, as in the case of the Great Central and Metropolitan, their old friends, the capital account of the Great Western Company has been swollen between June 30, 1897, and June 30 last by no less than £21,299,000, or at the rate of over £2,000,000 per annum. Deducting rather more than £2,750,000 of this total as being due to various amalgamations, there remains about £18,500,000 which has been directly spent by the company on new works, extensions, subsidies, and additional rolling-stock. Is it any wonder that the dividends on the ordinary stock should be declining, that the 6 per cent. paid for 1896-7 should have come down to 5¾ per cent. for the twelve months ended with last June? This reduction implies a loss to the ordinary stockholders of £220,000 per annum, and it will be much greater before an upward turn is again taken unless the policy now pursued is summarily stopped. The depreciation which has overtaken the ordinary stockholders in the interval is over £15,000,000 in the mean price of their stock, and we have no doubt whatever that it is going to be much greater in the near future unless a complete change takes place in the board's policy.

On perishable working stock alone the company has spent £3,402,000 in the ten years, and on lines open for traffic £6,851,000. For ten years back the total capital expenditure on new rolling-tock has exceeded an average of £340,000 a year. Every form of extravagance in this stock has been indulged—corridor carriages, second-class maintained in spite of its unprofitableness, slip carriages employed so as to facilitate the running of long-distance expresses without stoppages, so that important local stations may be in some imperfect manner served and kept from making a disturbance, dining and sleeping cars luxury of many kinds. But the most striking example of extravagance is found in the Irish extensions. The capital spent in connection therewith by the Great Western Company is £3,277,000, and outlay is still going on. Upon this money there does not seem to be any return whatever, and, as Mr. Stevens deftly points out, neither the Great Western Company nor the Southern and Western of Ireland Company seem to have ever looked for a profit. At any rate, in the agreement between them it is stated that "any loss incurred on the English side, including the steamboat service which is provided and maintained by the Great Western, shall be made good and borne by the Great Western Company, and any loss incurred on the Irish side shall be made good and borne by the Great Southern Company." In all probability this Fishguard and Rosslare enterprise will itself diminish the dividend of the ordinary stockholders in the near future. Much money is meanwhile being spent in endeavouring to popularise this route, and the result so far has been disastrous, as a table of one week's passenger traffic from Paddington to Fishguard given in this essay shows. The third-class accommodation provided in this train rose to 200 seats on the Saturday, and for every other day it was 130 seats. The highest number of third-class passengers carried was 58 on the Monday. Every train contained 48 first-class seats, and the highest number carried first-class was nine on the same Monday. Three of the days only five first-class passengers travelled. On Friday there were seven and on Tuesday six. This magnificently appointed train therefore travelled nearly empty each day in that week, and throughout at least eight months of the twelve even this small number of passengers cannot be counted upon, nor do all of those that travel go to Ireland. At all points, therefore, the story of the Great Western capital outlay and expansive enterprise is a most disastrous one, but for this Irish lavishness the board may seek justification in the "All-Red" mail route project, which is again being thrust forward from Canada, capital-hungry Canada.

Newcastle Breweries, Limited.

The directors of this company have so frightened themselves with visions of what this dreadful Socialistic Government is going to do to "The Trade" that they have issued a special appeal to holders of brewery securities to be up and doing. They admit that they have nothing more substantial than rumours of the Government's intentions, rumours mostly started by the Opposition in its desire to find a stick to beat the Government with, and it would be much more to the purpose if the directors, instead of wasting time and shareholders' money in a political propaganda of this kind, would attend to business and make some attempt to put their house in order. The auditors in their certificate again call attention to the fact that no special charge for depreciation has been made in respect of the expiry of leases, tenancies, and licences of those houses originally acquired by the company on its incorporation, nor for any differences between sums received for properties sold and the prices at which they were purchased or taken over at that time. In the case of leasehold properties acquired since the formation of the company, however, depreciation accounts have been opened for each property, by which the expenditure

thereon will disappear within the periods of the leases. That is good so far as it goes; but it seems doubtful if it is enough, and it would be advisable if the directors would state what is the present value of the property and goodwill standing in the balance-sheet at £857,630. It is possible, of course, that the reserves of various kinds, amounting altogether to £127,000—exclusive of the premium redemption account of £28,000—may be sufficient provision for depreciation, but apparently the auditors do not take that view. Gross profits for the 12 months showed an improvement of £4,880, at £112,817, and after providing for repairs and other charges, the nett income was £2,637 up, at £73,916. Directors' fees took £1,800 of this, and £5,239 was paid for compensation fund levy, but there was nothing this time to correspond with the £7,270 written off for investment depreciation, and the available total, including £6,743 brought in, was £10,611 better at £46,614. Out of this an extra £2,000 or £4,000 is transferred to general reserve, £2,101 is added to lost licences reserve, and £1,500 to the premium redemption account, and after writing off another £1,000 for depreciation of freehold and leasehold properties, the dividend on the ordinary shares is increased from 6 per cent. to 8, leaving £10,013, or £3,370 more to be carried forward. Special expenditure on new buildings, &c., to be written off over a term of years has been reduced on balance by £2,674, to £174,875, the outlay having been £5,693, against £8,637 deducted. Haymarket plant, brewery, extension, and casks, horses, &c., all show small decreases, but the investment in an allied company is unchanged at £88,233. Sundry creditors, including secured loans of £47,225, although £2,419 down, seem heavy at £109,338, when compared with sundry debtors of £22,789, but stocks have risen by £5,927 to £98,735, and cash is £15,071 up at £23,167.

Allgemeine Elektricitäts-Gesellschaft.

A balance-sheet such as the Allgemeine Elektricitäts-Gesellschaft issues from time to time is always worth studying were it for no other reason than the contrast it presents to similar exhibits here or in America. As we have had occasion to remark more than once, this company is in some respects remarkably strong and not least in the thorough manner in which it has written down its patents, inventories and goodwill to a matter of one mark each. Its debt, too, is comparatively small, amounting as it does to only about £1,867,000 against a paid-up share capital of £5,000,000. It is also strong in reserve funds and other credit balances, the aggregate of which came to about £2,350,000 at the date of the balance-sheet, June 30 last. Profits for the year amounted to £743,408, of which £600,000 went to pay a dividend of 12 per cent. upon the share capital while £20,000 was set aside as the tenth payable to the managers and for taxes, another £30,000 went to the staff and foremen, and a like amount to the pension fund, while £50,000 was added to the dividend reserve, leaving about £13,408 to be carried to the new year. Debtors are somewhat heavy at £3,255,000 as against £1,293,000 due by the company to creditors, but take it altogether this is a strikingly massive display, and its strength is made all the more conspicuous when we think of the figures of, say, the British Westinghouse Company which are conspicuous only for their weakness. In the last exhibit made by that company at the beginning of the present year patents and goodwill figured for £795,000, works stood at £1,083,000 and tools, machinery, &c., at £908,000. Naturally with such deadweight totals the profits were a minus quantity. While the Elektricitäts Company does not seem to be adding anything whatever to the capital cost of its works, even in its locked-up condition the British Westinghouse Company managed to lay out nearly £6,000 of new capital during the year. Bad times are none the less coming for the electrical industry in Germany as well as in other parts of the world, and it is just as well that the Elektricitäts Company should be in a position to face them.

Singer and Co., Limited.

Matters have drifted from bad to worse with this company during the 12 months ended August 31, and in view of the very unsatisfactory state of affairs disclosed by the report it is a pity the directors refused the shareholders' request for the appointment of an advisory committee. Year after year the chairman at the meeting has held out hopes of coming prosperity, and year after year he has had to admit that his forecasts had not been fulfilled. It is evident, therefore, that there is something radically wrong with the management, which the board, as at present constituted, is unable to remedy, and a committee, if it had done nothing else, might have been able to search out the weak spots. At the meeting the chairman stated that rather more cycles had been sold than in the previous year, and it is disappointing, therefore, to find that the nett revenue, even with profit on sales of shares and debentures included, was £5,440 lower at £8,117, or very little more than sufficient to provide the debenture interest. The motor department was transferred to the Singer Motor Company, Limited, early this year, and during the eight months of its existence made a nett profit sufficient to pay 5 per cent. on its capital, but the whole amount was carried forward, and the parent company got no help from that source. On the contrary, it has been deemed expedient to write down to its value as scrap material the 1906 motor car stock of the discarded horizontal type, which the new venture would not take over, and the profit and loss account has been debited with £13,155 for this purpose. In addition, £2,025 has been written off for bicycle patents no longer in use, together with £2,302 for depreciation of freehold property, plant, and trade marks, and after providing £546 for directors' and auditors' fees, the debit balance for the year amounted to £17,910, making the total deficiency to date £21,250. In the balance-sheet the item of £18,943 appearing last year under the head of preliminary outlay on motor department had given place to shares in the Singer Motor Company valued at £19,000. The goodwill of the original business remains at £146,749, a monstrous figure for a company which is unable to earn enough to provide for its debenture interest and administration charges. Sundry creditors have been reduced by £3,124 to £13,045, but at the expense of decreases of £4,528, to £26,808, in sundry debtors and £6,805, to £25,744, in stocks, while investments are £6,514 down at £4,081, and cash is much about the same at £6,508. Property is valued at £26,878, and plant, &c., at £20,538, but even if we count in the Motor Company's shares the tangible assets fall considerably short of the debenture debt, and altogether the company's position could not be very much worse without bringing it to a sudden halt.

Ind, Coope and Co.

Another effort is to be made by the directors of this unhappy brewery and public-house undertaking to get an indemnity from the stockholders for past mistakes. They are only minor mistakes, we are quite willing to allow, and there is a good deal to be said for the board in the circumstances. It was composed of men of that large class who eat the cake and continue to act as if they still had it to consume. Why then cavil at their liberality to each other. It is now frankly admitted that payments were made to Mr. Edward Murray Ind and others which the directors, as a body, had no power whatever to make. In January, 1902, the company, which was at that date practically bankrupt, living on issues of capital and debt which should never have been raised, entered into an agreement with this gentleman to pay him a retiring allowance of £1,000 per annum for ten years and thereafter £500 per annum for life. Under that agreement £4,667 has been paid to Mr. Ind, and the directors now seek to have this payment confirmed because, as they candidly say, they find, according to the judgment of the late Mr. Justice Kekewich, that they had no power to enter into any such compact. The same observation applies to their other payments. The old board assisted Mr.

Blackhall in 1893 to buy shares in the company so that he might be qualified to take a seat at the board. In all £5,095 was thus advanced, and an indemnity for that payment is asked. Then a Mr. W. R. Biddell received £2,817, Mr. C. W. Matthews £1,025 and Mr. E. J. Bird and his widow got altogether £1,968, none of which payments appear to have been within the power of the directors to grant. An extraordinary general meeting of shareholders has accordingly been called to get the various misdeeds of the late board condoned and wiped out. Probably enough consent will be given to this slate cleaning, and we really do not see why there should be any particular anxiety to rake up the past, if the greater sins of the old board are to go unpunished. After all, had the business continued to be as prosperous as it was in former days, and if the directors had not calmly eaten the cake, doing nothing to extend the company's earning power, we should never have heard of small matters of this kind. That they are reprehensible in the circumstances is undoubted, but the money cannot be got back, and as Mr. Murray Ind now gets a "personal allowance" of no more than £300 per annum, while the other payments have apparently been all stopped, while also the advance made to Mr. Blackhall is admittedly irrecoverable, it seems wisest to bury the whole matter as quickly as possible. We say this because if there is any chance of resuscitating the business there must be harmony and co-operation between stockholders and the management. Whether the business is improving the circulars recently issued naturally enough give no hint, but we trust that when the next report comes to be drawn up it will not be of the same bald description as those that have preceded it. The truth may involve reorganisation on a drastic plan, but better that than drag on year after year vainly endeavouring to keep the thing going under an intolerable burden of lost capital, capital much of which should never have been raised.

American Business Notes.

Subsidence continues on the New York Stock Exchange, but the sentiment there appears to be less agitated, and comfort was obtained by the Street from the return of the New York Associated Banks, which was better than had been estimated. Loans show a reduction of £2,274,000 on the week's averages, and thanks to an increase of £654,200 in the specie and of £167,200 in the greenbacks held, the decline in the deposits is only £1,600,000, so the reserve is better by £1,222,000, and now shows a deficiency of only £8,020,400, against one of £340,000 last year. The decline in the deposit total is attributed to liquidation on the Stock Exchange which went on all week, and no doubt that had its influence, because lower prices necessarily involve reduced advances. The fact, however, that there is still a deficiency of more than £8,000,000 in the reserve shows that the banks are not yet in a position to resume payments in the ordinary way, and we should like to know to what extent the deposit average total of £215,173,200 displayed is made up of Clearing House certificates.

Throughout the week the premium on currency was maintained at about 1 to 1½ per cent., and none of the National banks have, as yet, resumed business in the ordinary course. They seem to have been more severely struck by the crisis than the State banks, about which we have heard little or nothing since the crisis began. In some parts of the country these banks are more important than the National banks, and interesting local facts have been published by the *Economist* of Chicago, which suggest that the absence or insignificance of note circulations has been beneficial to these State banks. In Chicago their deposits exceed those of the National banks, and they have suffered in common, but we should not be disposed to draw quite the same inference as it does from the returns that newspaper publishes. Between August 22 and December 3 the National banks in Chicago lost only about £4,000,000 of deposits, and this appears to be taken as a great proof of strength. In other words, out of the £75,124,000 of deposits exhibited by these banks on August 22, £63,520,000 remained on December 3. A somewhat larger decline is shown by the State banks, whose total deposits at the earlier date amounted to £75,119,000. By December 3 this total had fallen to rather less than £70,000,000, but we have not heard of any important State bank being driven to close its doors, and the remarkable fact with regard to the National banks is that they should have been obliged to suspend payment after so small a drain upon their resources.

The Chicago National banks were quite early in the field as issuers of Clearing House certificates, and no one of them stood a run such as the National Bank of Commerce, in Kansas City seems to have endured before it closed its doors. In that case the deposits were reduced by more than one-half during the run, whereas the decline in the deposits of the National banks of Chicago was little more than 7 per cent. It must not, however, be overlooked that in the deposit totals of these Chicago banks as exhibited on December 3 a good many Clearing House certificates figured. Thus the First National Bank, whose total deposits at that date amounted to £19,265,000, included therein £546,000 of Clearing House certificates and £1,012,000 of "borrowed bonds," besides £270,000 of Government deposit money. It is much the same with most of the other banks, so that their deposit show of that date is a misleading one. It may thus be that they really suffered a much more severe drain of their resources than the comparison reveals. Even so, however, we cannot but fear that their resources were so fully locked up when the crisis broke upon them as to force them at once into a condition of suspended animation.

A small bank, but one of the oldest National banks in New England, the Jewellers' Bank of North Attleboro', failed on Wednesday, its cashier having killed himself. Its liabilities on deposits are only about £200,000, and its paid-up capital is only £20,000, so its stoppage is merely a symptom.

Money has been dear enough on Wall Street this week, but that was expected, because funds are being collected for the New Year payments, which are apparently expected to involve a transfer of something like £60,000,000 from the hands of dividend-paying corporations to the holders of their securities. Rates for call loans have accordingly been lifted at times to 15 and 16 per cent., while little of the lending has been done below 10 per cent., but everybody expects that when the New Year comes in this stringency will quite disappear, and the market prophets are accordingly predicting a great revival of activity when that time comes. False prophets always had the gift of the gab.

A wrong inference appears to have been drawn in New York from the fact that the gold movements out and in for the eleven months of the present year down to the end of November were really more favourable looking to the States than those of a year ago. Imaginations have been impressed of late by the enormous demands for gold in Europe on American account, but for the 11 months there is a decrease of nearly £10,000,000 in the imports compared with the same period last year. In 1906, however, the imports of gold were considerable during the early part of the year as well as in the autumn, whereas this year they have been staved off until the crisis broke out in October. But it is a mistake to imagine that such a movement as has lately taken place is, as alleged, normal in any sense, or that it represents an actual gold attracting capacity generated by American foreign trade. The contrary seems to be the truth when we look into that trade, for the imports of merchandise to the United States for the same period of the current year are about £22,000,000 larger than for the first eleven months of 1906, while the exports of merchandise have increased by barely £12,000,000. Consequently the adverse balance of trade is really greater this year than last, and to the extent it is, the power of the States to draw gold from Europe is smaller. Also the movement of securities from Europe to America has, on the whole, been against the power of New York to retain

bankers there to take away our gold, although of that movement there can be no statistics furnished. Still we know that the tendency has been to send securities back to America, and even if this has been to some extent counterbalanced by bond buying on this side, there is still enough of the adverse balance thus created undigested, to weaken the power to draw away our gold. From all this we should infer that the gold has been got to some extent upon finance bills, and that the present troubles instead of subsiding will break out again early in the new year with greater violence than ever.

Vanderbilt stocks have been rather in demand during the first half of the week, and the cause of the run upon them, if that word can be used for a very mild activity, is to be found in the extra dividends of 2 per cent. paid by both the Lake Shore and the Michigan Central subsidiary companies. These dependents of the New York Central have doubtless been compelled to raise dividends in the interests of the controlling company which wants large sums of additional capital, and in order to be in a position to attract this capital must make a show of maintaining its own dividend whether earned or not. The extra money received on the stocks it holds of these two companies will enable the directors to make a much more solid-looking exhibit than they might have been free to do if they had had to depend entirely on the nett earnings of the parent line. Accordingly the board of the New York Central itself has declared the "usual" quarterly dividend of 1½ per cent. on the common stock of the company.

Not to be out-done the Pennsylvania Railroad Company immediately followed suit, and ordered its subsidiary Pennsylvania Company, whose ordinary stock of £14,000,000 is all held by it, to raise its dividends for the half-year from 3 per cent. to 4 per cent., that is to say, from 6 per cent. per annum to 8. All this extra money will go into the treasury of the railroad company, and help it also to make a good exhibit when its accounts for the year make their appearance. Both the New York Central and Pennsylvania Railroad boards seem to have imagined that the market would be stimulated by action of this description. If so they were disappointed. Prices did struggle up a little for a few minutes, but the shrewd men on Wall Street immediately put the right interpretation upon these extra dividends. "The companies want more money," they said, "and are throwing out these sprats to catch the whale"—the money of the simple European; so the bears took to selling and prices sagged off, as they ought to do. We have not the slightest doubt that these dividend announcements are little better than desperate expedients. Higher dividends certainly ought not to have been distributed in the present state of the finances of both these companies. They want money, or will very soon want it, in tens of millions sterling, not only to redeem floating obligations presently beginning to fall due, but to enable them to complete works already in hand, and a wise policy would have been to meet the anticipations of the market and reduce dividends of subsidiaries instead of increasing them, so that the balance-sheets to be issued next month might have indicated some husbanding of resources. No fall worth speaking of would have occurred in prices if these subsidiary roads had paid less than they did a year ago, instead of more. On the contrary, prices might have stiffened because they had been put down in anticipation of some reductions. As it is, discredit is thrown, not merely upon the discretion of the boards of these two great corporations, but upon their business astuteness.

That the "holding" Reading Company should give its "regular" 2 per cent. for the half-year, and the Lehigh Valley add to its habitual 2 per cent. a bonus dividend of 1 per cent. for the half-year—putting its common stock on "a 6 per cent. basis," we presume—is all in the same line of tactics—part of the make-believe of those who would persuade us that the crisis is a small thing, soon to be ended, leaving only "prosperity" behind it. A touch of the grotesque is added to the comedy by the declaration of the "regular" dividend of the Louisville and Nashville at the rate of 6 per cent. per annum. This road is controlled by the Atlantic Coast Line, which recently also declared its "regular" dividend, which, however, is to be paid in scrip, not cash. Will the Louisville also distribute paper, I.O.U.'s or Clearing House certificates? We know not, but the make-believe is very funny!

A balance-sheet has been issued by the Receiver of the Westinghouse Electric and Manufacturing Company, which recently stopped payment in the United States. He brings out a "surplus" of £2,322,000, and were that a reality there should have been no necessity for any stoppage. A look at the details, however, dissipates any tendency to take a very sanguine view of the company's immediate future. Its property and plant, including machinery, tools, &c., is entered at £2,468,450, "patents" at £1,180,000, "charters" at £284,000, and "notes receivable" at £707,000. These are independent of the "working assets," which figure for £3,560,000, and include £1,244,000 for work in progress, £860,000 for raw materials and other items of that kind. Then we have investments of various descriptions, including £965,000 in the stocks of subsidiary companies, and about £1,500,000 in the bonds and stocks of European Westinghouse companies, in addition, apparently, to the securities of such pledged by the company for advances. It has, in fact, pawned its securities of various descriptions to the amount of £2,600,000, and amongst the possessions thus treated is £627,421 of British Westinghouse debentures and about £450,000 of Russian Westinghouse debentures. The assets thus represent many questionable items, questionable both as to value or possibility of realisation. We should think the patents, for instance, enormously over-valued at the figure put down. The surplus is accordingly, in great part if not entirely, an imaginary one, and current liabilities are tolerably heavy, amounting as they do to about £2,700,000 exclusive of £1,725,000 due on collateral notes issued by subsidiaries, including the Russian Westinghouse Company, and pawned by the parent. The funded debt of the company, it may be added, amounts to about £4,100,000, as against a paid-up capital of £5,600,000.

But over and above all the items and entries in the balance-sheet there are contingent liabilities aggregating about £900,000 which are not taken into the account at all, and some of the particulars relating to these are rather interesting. Putting aside those merely affecting American interests, we find notes of the European Westinghouse companies discounted to an amount of £124,000 odd and bearing the American company's endorsement. The company is also guarantor for the Union Bank of Vienna for a loan not exceeding £6,000 to an Austrian bantling, and the Receiver does not know how much of this is owing. It also guarantees the Williams, Deacon Bank on an overdraft not to exceed £50,000 granted to the British Westinghouse Company over and above the advances to it already mentioned. On October 26 last the liability on this overdraft was about £36,000. Then it further guarantees Messrs. Glynn, Mills, Currie, and Co. against loss on an advance not to exceed £150,000, to be made by them to the same British Westinghouse Company. This advance is said to be "secured" by the deposit of 25,000 shares of the Traction and Power Securities Company, Limited, but that does not much relieve the guaranteeing company. At the same date its actual liability on this guarantee was about £71,000. It is mixed up further with the Canadian Westinghouse Company, the Westinghouse Air Brake Company, and the Security Investment Company, so that the aggregate of its commitments of this kind omitted from the balance-sheet is as above. It would look cruel to describe a display such as the Receiver makes as indicative of hopeless insolvency, but that the company's assets are not worth anything like the amount for which they are taken into the balance-sheet seems unquestionable. No wonder its managers did all they knew to raise a large loan for the company in Paris.

It seems the managers of the Carnegie Steel combine have repented of their determination to cut down the

wages of their rollers by 10 per cent. from January 1. The order is said to have been rescinded, and the reason given for this step is that, were it enforced, inconvenient remarks might be made about the large earnings of the company for the present year. "Odious comparisons" would certainly be drawn, and might "invite unfavourable legislation." The gentlemen concerned are to be congratulated upon their worldly wisdom, only that was never in doubt among their friends. And certainly the exhibit of this ravening Corporation made for the year ended June 30 last, and graciously handed out to the New York Stock Exchange the other day, is the most dazzling of its kind we have ever beheld. Here also there is a splendid surplus shown, no less than some £20,760,000, and the earnings are simply magnificent. But then so is the capital. Properties alone are valued in the balance-sheet at over £276,000,000, and "inventories" are put in at about £23,100,000, while accounts receivable stand at over £12,600,000, against rather less than £6,000,000 due by the Trust, the aggregate of the balance-sheet being the tremendous one of £340,634,000. Yet there seem to be flaws in the glittering display here also, for the splendid total of the inventories includes "profits accrued to subsidiary companies on materials and products sold by them to other subsidiary companies" and not yet disposed of by the buyers. In other words, the profits are made to mount up by help of inter-dealing between component parts of the combination to an extent wholly undisclosed. No wonder, therefore, that the directors have determined to maintain prices, for it might very well be that did the commodities made and vended by it and its subsidiaries fall to their natural price or below it, there would be no surplus profits at all, but deficiency. And what are "inventories" anyhow? During the past year ended June 30, £6,088,000 was spent on capital account, but most of this outlay was met from revenue set aside against such expenditure, so that the actual increase in the capital value of the properties was barely £280,000. The reserves of various kinds look well in spite of this writing off or absorption, but they are special, not general, reserves, and even so mostly wrapped up in the business. Thus there is about £8,200,000 of sinking funds belonging to subsidiaries, depreciation and improvement funds, besides a special construction fund on account of the Gary and Duluth plants which amounts to £6,254,000 all by itself. In fact the sinking funds, reserve funds, contingent, and insurance funds aggregate nearly £24,000,000. It will be interesting to compare a statement of this kind with the figures to be issued a twelvemonth hence. Already it is admitted by "a member of the finance committee" of the Trust that its business is now only 50 per cent. of the "normal," and if more money cannot be procured in Europe to finance its customers the decline will be more emphatic still before a recovery sets in.

Some mystery appears to hang around the traffic returns of American Railroads, most of which still show either some increase in gross receipts or very little decrease, but all of which indicate a startling increase in working expenses. Look at the figures of the Atchison, Topeka, and Santa Fé road for October. Its gross earnings were less than $86,000 up, but expenses rose by $1,330,000. Add in an increase of $46,000 in taxes, and the loss in nett income on the month's business was $1,290,000, or about £260,000. In like fashion the Pennsylvania Railroad on its lines east of Pittsburg, where a gross increase of $1,675,000 in receipts is shown, spent $2,085,000 more in earning this increase, so that there was actually a nett loss of over $400,000 on the month's business. Against this there was an improvement of $194,300 in the nett earnings of the lines west of Pittsburg and Erie, but upon the whole system, east and west together, there was none the less a decline in nett earnings, thanks entirely to the swollen out working costs. That expenses have been rising for some time we know, but how are we to account for these disproportionate enlargements? They cannot be due merely to increased wages, nor does it seem that they can be ascribed to higher cost of materials, for the boast of those who furnish the heaviest materials to the railways has always been that they kept there commodities at "even" prices. We are totally unable to explain this riddle and can only draw attention to it. On the year, for the Pennsylvania, at any rate, the recent decline in nett receipts will make no difference in the dividend-paying power, because there is still a slight increase in the nett earnings over the first ten months of last year, but that increase is little more than $2,000,000 against an increase of $26,199,000 in the gross earnings. It is the future we are afraid of, and the floating debts.

The figures for the Harriman, or Standard Oil, roads covering the same month, are quite in unison with those just given. The Union Pacific, for instance, shows an increase in the gross receipts of $815,000, and a decrease in nett earnings of $335,000, while the Southern Pacific, with an increase of $1,213,000 in the gross, reveals a decrease of $1,420,000 in the nett. There is no way we can think of whereby movements of this kind can be intelligibly understood, and we should not be surprised at all to find that the figures of revenue are to a considerable extent fictitious. It would only be in accordance with past experience were they to prove to be so.

At a meeting of the steel makers in the United States a resolution was come to to the effect that in future they would endeavour not to kill so many railroad passengers. In other words, the quality of the rails made by them, and paid for to a large extent with money furnished by Europe, is to be improved. But how about the thousands of miles of rotten rails now on the road-beds? And is not this decision a significant admission of guilt?

Some very interesting statements were made by the president of the Bank of Montreal, Sir George Drummond, at the shareholders' meeting held in Montreal early this month. He and other speakers did their best to reassure not only the shareholders but the American public, and managed to "put up" a very good case for hope. No one can deny that the progress of Canada has been remarkable—we may say stupendous—during the past decade. Some of Sir George's figures though give an impressive indication of the sources of this great prosperity which is not wholly reassuring. He took a sensible view of the foreign trade balance about which bankers and financial writers over the border talk such nonsense, and admitted that it was running heavily against the Dominion. In the five years 1898-1902 inclusive, the excess of Canadian imports over exports of domestic products was only £5,050,000. This he described as the smallest trade balance in the history of Canada over a like period, but for a debtor country that was really a healthy sign. In the five years, however, that have passed since 1902 the value of imports for home consumption has exceeded the value of domestic exports by no less than £50,200,000, and in the year ended June 30 last the excess of imports over exports was £23,752,900, the largest in the history of the country for any one year, and a really alarming total. For what do figures of this description mean? They can only mean that Canada has of late years been importing foreign capital to a most extravagant extent, and experience warns us that outbreaks of borrowing, loan-raising, share and stock selling, such as these excessive imports indicate, are always followed by reaction. The greater the indulgence in credit thus expressed, the more severe is the recoil, and our fears as to the immediate, not perhaps the remote, future of Canada are heightened rather than diminished by these statistics.

A recital like that of Sir George Drummond's therefore gives food enough for reflection, and to it may be added here the following, but too suggestive, extract from a letter recently written by a "sober-minded" young Englishman in Saskatchewan to a friend in England, by whom it has been forwarded to us. It is significant of much—of many disillusionments and great privations endured in silence by the people who have been decoyed into a country whose climate for the most part precludes the possibility of settlers ever attaining to comfort.

"Canada is mostly a farce. The glaring reports one hears of this country in England are mere myths. I meet day after day Englishmen who are disgusted with the country. They all say, 'If we had only known what we were coming to, we would not have minded so much.' . . . All farmers round here are deeply in debt."

Recently there has been a good deal said about the extent to which Canadian banking resources were locked up in New York. Apparently the guesses made were not far off the truth, for the vice-president and general manager of the Bank of Montreal, Mr. Clouston, gave some figures which, although in one sense reassuring, sufficed to indicate that the money pinch in Canada must have been intensified by the impossibility of withdrawing resources from New York. A year ago, he said, the Canadian banks had £19,200,000 of their resources lent abroad, whereas "at the present time" they have only £14,640,000, thus lodged. There is, therefore, a reduction of £4,600,000 on the comparison of dates, but £14,000,000 to £15,000,000 is a large amount of money to have put away beyond immediate control, and although it may be quite true that during this same period current loans in Canada have risen by £9,600,000, and cash reserves by more than £1,000,000, it none the less follows that further domestic lending was made extremely difficult in the circumstances. There is nothing alarming, perhaps, in this fact, nor anything that implies censure upon Canadian banks in a body. They were only carrying on business in ordinary course, and it was doubtless necessary to that business that large sums of their money should be left with their foreign banking correspondents. None the less were they unable to finance the harvest unaided, and without help from Europe some among them might have had to close their doors.

Passing Events.

That is a curious step taken by the Transvaal Government, and does not seem to indicate any great friendliness towards the Zulu-hunting neighbouring Government of Natal. From February 1, 1908, it has agreed to pay the Portuguese Government a bounty of 4½d. per ton on all Transvaal coal shipped from Delagoa Bay. This is not mere generosity, and may have been a necessary step, but it will not help the traffic of Durban. In return for such a bounty the Portuguese Government has undertaken to spend immediately a sum of £7,000 on coaling facilities at Delagoa Bay on the same scale as those at Durban. It will also abolish the demurrage on trucks waiting shipment, and it is hoped that measures of this kind will stimulate the coal industry of the Transvaal. It doubtless will, although we should have thought that the consumption of coal within the State itself might have been relied upon to keep its mines active for many a day to come. Can it be that this Victoria Falls Electric Power scheme is looming in the near future as something likely to reduce the domestic requirements for fuel, or is the Transvaal so extremely poor everywhere, away from the working mines, as to be unable to buy enough coal at any price to keep the colliers in work?

Rather better news comes from Chile, where the worst of the crisis seems to have been surmounted. The exchange has risen above 9d. after recently touching 8d., and with calmness restored to the public mind a further recovery should be quite feasible. As we said last week, Chile has resources enough to meet all engagements, although the help of another loan may unfortunately be necessary to enable the people to overcome the severe losses inflicted by the earthquake, and by the recoil in trade and in the prices of nitrate and copper which form the principal exports of the country. But its Government and people deserve help.

A curious income-tax graduation has been brought into operation by the Parliament of Western Australia. It has passed a Bill imposing a tax of 4d. in the £ on incomes over £200 per annum, and a land tax of 1d. in the £ on unimproved and ½d. in the £ on improved land values. Absentees are to pay 50 per cent. extra in every case. This land tax would be a magnificent source of income if it were applied to urban and rural values in the United Kingdom, but it is only expected to realise £80,000 per annum in Western Australia. As for the income-tax, it is to be graduated in a quite novel manner, since a reduction of £10 in the income assessed is to be given for each child the taxpayer has, so that a man with a family of a dozen children would have to have an income exceeding £320 before he became liable for a farthing of this fourpence.

Are the difficulties in Portugal about to be settled by the issue of another loan? At bottom the despotism now in force there is probably a financial matter like so many of these troubles. As a State, Portugal has long been insolvent, and has maintained its position as a civilised community and apparently paid its way only by the skilful, if selfish, aid of the great cosmopolite usurers and their banks; but even these powerful influences must come to the end of their devices one day if the revenues of the country are continuously unable to cover the charges laid upon them. They have been so in Portugal since ever we can remember, and perhaps for many a day before. So every now and again there has been a reconstruction, a wiping off and an addition. Some such series of operations is doubtless again imminent, since the present confusion of national finance looks to all outside eyes hopeless. Therefore a proposal has been set on foot that the Government should raise a loan of £9,000,000. We wish the undertakers joy of the job, but they must not set about it quite yet. Russia has the first claim.

No wonder Antofagasta deferred stock rushed up last week at such a speed, but how did the information leak out? It was only on Saturday that the board issued a circular to the shareholders informing them that the President of Chile had signed a decree authorising the company to collect that part of its tariffs paid for in Chilian dollars at a minimum rate of exchange of 1s. 2½d. This is an immense concession, and will undoubtedly save the company much loss in remitting its profits to Europe; will be a gain all round if it does not reduce the volume of business done. But when was this proposal for a fixed exchange in the company's favour laid before the Chilian Government, and when first was the news received that the demand made by it was to be acceded to? Somebody must have known early last week of what was coming, else the deferred stock of the company would not have run up £15 within a day or two. Surely the directors owe it not only to the stockholders, but to the market and the public to make some inquiry into this matter, and take such steps as will put an end to unpleasant incidents of a like kind for the future.

We heartily sympathise with those debenture stockholders of the British Westinghouse Electric and Manufacturing Company who are opposed to the creation of a prior lien mortgage for £300,000 to be put in front of them. Vigorous expression was given to this discontent at the meeting held on Wednesday, but it was of no avail, because the board of the company voted upon the £675,000 of the company's existing debenture stock held by the parent American company. It was thus able to swamp the opposition with the utmost ease, because such an addition to the proxies held by the board brought their total voting strength up to nearly £895,000. So the resolution was carried, in spite of protests, and if the money were really used for the development of the company's business, the stroke might perhaps turn out better than it looks for the displaced holders of the old debenture stock. Looking, however, at the details given under American Business Notes regarding the commitments of the parent American company, an uneasy feeling springs up in the mind that this £300,000 may be seized and pledged or sold to meet some of the debts of that company due in Europe, and we should have been glad if Mr. J. A. Bryce, M.P., who attended the meeting as director of the British

company, had been more explicit on this point. What is to be done with the money?

A quite glowing story was told by Sir George Newnes at the meeting of the Commonwealth Oil Corporation, and as Sir George is a perfectly trustworthy man we must congratulate the shareholders on the possession of what appears to be a property of great capabilities. The corporation, he says, has a deposit of shale of a richness unknown in Scotland "save as a geological curiosity." The field owned by it was no longer a speculative affair, but a proved certainty, and the shareholders had 20,000,000 tons of shale proved with an assumable further possession of 30,000,000 tons. That was equivalent to from 7,000,000 to 10,000,000 tons of oil, or 2,400,000,000 gallons, requiring no wells but only simple retorts for extraction. This is good news, and it, of course, led up to a request for further money, the directors having decided to offer the shareholders in the first instance £150,000 in 5½ per cent. debentures. Subscribers to this issue are to have the option at any time within 18 months to a *pro rata* allotment of the remaining 75,000 deferred shares at £2 per share. In the circumstances these proposals may be reasonable, and any way they were accepted. But we hope the Standard Oil Company has not heard of all this wealth.

With the end of the year comes a crop of stories about impending insurance office absorptions and amalgamations. One of these, to the effect that the Phœnix Company was going to take in the Indemnity Marine, has been authoritatively denied, but others persist. The London and Lancashire Fire Office will fuse with the Merchants' Marine, it is hinted, and the Royal is possibly going to absorb the British and Foreign Marine. But nobody appears to have found a mate yet for the Union Marine, welcome though the discovery might be.

Rains continue to fall in various parts of India, according to the weekly message from the Governor-General, but not in Northern India, and to a very small extent in Bengal and Assam. Over most of the peninsula indeed the weather was again rainless, or nearly so, last week, and although general rain in Burma has improved crop prospects, especially in precarious tracts there, while in the Central Provinces last week's rain has improved the chances of the spring crops, the imminence of a great famine must still be recognised. The numbers on test works in nine districts of the United Provinces of Agra and Oudh now reach 8,900, and actual famine has been "declared" in two districts, where 600 people are being gratuitously relieved. There are also 5,000 persons employed on test works in three of the Central India stations, besides about 500 in the Panch Mahals district of Bombay. Prices, however, "continue stationary as a whole," though high enough, we fear, and prospects are really not appreciably improved if we may judge by the cold weather forecast as to rain. The quantity is expected to be, on the whole, below rather than above the average.

Owing to wet, unseasonable weather the crop gathered by the Dumont Coffee Company for the current year fell considerably below the manager's estimate at 87,925 cwts., but the average price so far realised has been 40s. 5d. per cwt. compared with 41s. 9d. at the same date last year. There are still 37,393 cwts. unsold, and although the average rate of exchange has been 15⅛d. per milreis against 16d., there is an extra export duty of about 2s. per cwt. to be paid on the whole crop. A dividend of 3½ per cent. on the preference shares will be paid at the end of this month, leaving the dividend still in arrears as from April 8, 1904.

The Week in Mines.

This week's mining story is rather more interesting than is usually the case immediately before Christmas. The Kaffir Circus proper has remained in a quiet and apathetic condition, but elsewhere the excitement has been considerable. No one paid any particular attention to gold shares, and the fact that the telephone between London and Paris was seriously interrupted during a large part of the week assisted to render dealings exceedingly narrow. Except in the case of one or two of the heavy priced shares, movements rarely if ever exceeded half-a-crown, but the tone was dull in the absence of effective support, and on balance quotations are a shade lower. The South Nourse has been compelled to close down owing to lack of funds, and it is said that the Consolidated Main Reef having encountered a dyke has leased 30 of its stamps to the Main Reef West. Against this can be placed one or two cheering items. Good progress is reported in the erection of the surface and underground equipment of the West Rand Consolidated, and the Durban Roodepoort Deep is increasing its equipment by 40 stamps, which should be an indication that the company is doing well. Many dividends have been declared during the week, and we append full details:—

Rand Mines, 7½ per cent.; Robinson Central Deep, 40 per cent.; Robinson Gold, 14 per cent.; Meyer and Charlton, 50 per cent.; Knights, 15 per cent.; New Primrose, 20 per cent.; Glencairn Main Reef, 5 per cent.; New Rietfontein, 15 per cent.; Premier Diamond, 400 per cent.; Cason, 30 per cent.; H.F. Co., 27½ per cent.; Angelo, 22½ per cent.; Knights Deep, 10 per cent.; East Rand, 17½ per cent.; Driefontein, 10 per cent.; New Comet, 6¼ per cent.; Robinson Deep, 17½ per cent.; Simmer and Jack, 10 per cent. North Randfontein, 10 per cent.; South Randfontein, 10 per cent.; Perges Randfontein, 10 per cent.; Witwatersrand Deep, 22½ per cent.; Robinson Randfontein, 10 per cent.; New Kleinfontein, 10 per cent.; Langlaagte Estate, 20 per cent. In a good many cases these distributions are on an increased scale, but the declarations have done nothing to stimulate public enthusiasm as the market leaders had hoped, and professionals are clearly in no mood to start another rise on their own. We believe the last little flutter sensibly increased the number of shares in their possession, the public having taken advantage of the run up to lighten their losses. Land and Finance things went the same way as Kaffirs, and the absence of incident was very marked.

But when we come to the Diamond section there is a different story to tell. It is the De Beers' dividend that is causing all the excitement. We need not recapitulate the reasons which have led to the conclusion that the dividend for the past six months will be heavily reduced. They are unfortunately only too well known, but the mere fact that a substantial drop, if not a complete suspension, is looked for renders all concerned deeply anxious, and as the days and weeks pass by without any definite news the market for the shares steadily grows worse, and sales of any magnitude are virtually impossible. It is not usual for the dividend for the half-year then current to be mentioned at the annual meeting held at the end of the year to consider the accounts to June 30, but in view of the exceptional circumstances of the case it was hoped that something might have been said on the present occasion. The meeting was held last Saturday, and a "record" profit, so called, was announced, but this applies to the twelve months ended June 30, and the chairman, Mr. Francis Oats, had to confess to a considerable restriction in the demand for stones since the close of the financial year. Not a word was forthcoming about the dividend, and as nothing has been heard since, the market is putting the worst construction on the delay. At the end of 1906 17s. 6d. was announced, but the best that was ever looked for on the present occasion was 10s., and some would not be surprised if only 7s. 6d. were paid. Indeed, a wild rumour gained currency in the middle of the week that nothing at all would be forthcoming, but anything so drastic is hardly probable, because the market would be dealt a blow from which it could not recover for a very long time. At the same time we must give close attention to the relations between the Diamond Syndicate and the producing companies. It is said that the obligation of the former to take the outputs is optional under certain conditions, and that the option will not be exercised for the current six months. The importance of this

could not be exaggerated. Maybe the finances of the syndicate are strained to the uttermost in carrying the present load of stones, and that failing an outlet it cannot take any more. This may mean a piling up of stocks by the two big companies, the Premier now as well as the De Beers, and every farthing of money necessary for carrying on these huge enterprises must be provided, with no revenue from diamond sales coming in unless other outlets for the gems can be found. There was a heavy bout of selling in the middle of the week, De Beers being driven down to 14¾, and Premiers to 7 despite the latter's 400 per cent. dividend, and although there was some recovery from the worst the market is just in the state that anything may happen. Jagers weakened a trifle in sympathy, but Roberts Victor, concerning which various adverse rumours have been circulated, were disposed to pick up. Those, by the way, who predict "no dividend" on De Beers, allege that the proceeds of the sales for the current half-year have been invested by the syndicate in American bills due in January, and doubts are hinted at as to whether these will be met.

Rhodesian things have been rather miserable, and although Tanganyikas tried to rally from the slump which followed the publication of the report, the price was soon back to 2¼. Zambesias failed to recover, and the Banket things made a very poor show. Eldorados have dropped about ¼ since the issue of the report. Explorations have also tended downwards, and Chartered are barely ⅞. No business of any sort seems to take place, and nearly every day dealers tell us "Rhodesians have not been mentioned." Discussion of Chartered finance has been less animated of late, but it will doubtless revive when the time for the payment of more railway coupons draws near.

West Australians have been almost a blank, with an easier tendency, apart from Associateds, but Broken Hills were rather wild. They opened fairly steady, and looked like going better, but the colony sent over selling orders, and prices broke all along the line. Broken Hill Norths were particularly heavy on fears that no dividend would be paid owing to the company's important capital outlays, and a cable from the Block 14 company, stating that it had been decided not to restart the concentration works owing to the present price of markets, kept things moving down. The company will continue to mine carbonate ore. Lead, however, commenced to recover at this point, and although the silver market remained in a state of demoralisation, a quick rebound in prices ensued. "Bears" got into a funk, the shortage of shares being very acute, and the Broken Hill North, instead of suspending dividends, has decided to pay 1s. per share. This did the market good, but the prospect is somewhat uncertain while the metal markets remain so erratic. Zincs spurted to 4s., but we should not care to buy.

Strange to relate, there was actually a revival in the West African division. Lord Harris cheered people up with his remarks at the meeting of the Gold Coast Agency, and promised support for Cinnamon Bippo, not only from the Agency, but from the Consolidated Gold Fields, provided its proprietors would also do their share. A scheme may be formulated shortly. Needless almost to say, the spurt only lasted one day, but prices were raised a little, and every little helps. Sansu has had a bit of luck. It was expected that the available pay ore would all be treated by the end of August, and provide £8,000 for prospecting, but it lasted until the end of November and gave £14,000 free. Prospecting on lines laid down by the company's engineer is now being carried on in a systematic manner by a qualified staff. It will be charitable to say nothing about Egyptians.

Fluctuations in copper were narrower than of late, but the market commenced poorly, and further receded when the fortnightly statistics came out, showing an increase of 2,000 tons in the visible supply. The best price of Rio Tintos was 66, and after touching 64⅞ there was a modest rally following a pick-up in the metal. Other shares followed the leader in the usual fashion, but dealing was very restricted. An incident was a collapse in a thing known as Lake Copper. The operations of a pool were supposed to be the cause of the recent run up in the price, but the supporting group must have been a poor lot as a genuine sale or two, only a few hundred shares, completely shattered the structure, and the shares are now ½-1½ nominal, and no buyers. Tin fell sensationally early in the week, and shares dropped heavily, particularly Pahangs, on the statements at the meeting that the mill would not be ready for some months yet, but the metal subsequently recovered well, and share prices got the benefit.

Miscellaneous shares were not very active, but El Oros went off on the drop in the November profit, and the wretched Le Roi report caused that company's shares to slip away. Indian showed all-round dulness, and Pekins did not hold, but New Zealands kept quietly steady.

All doubts about the De Beers dividend will be set at rest by the following official announcement just to hand:—"The London office has received telegraphic advice from Kimberley to the effect that the results of the half-year ending December 31 are sufficient to admit of the declaration of a dividend of 20 per cent. on the preference shares, and more than that on the deferred shares, after making ample provision for taxation and depreciation, but the demand for diamonds having recently fallen off considerably the board of directors consider it is more prudent to declare only the preference dividend at present, and to retain their surplus cash in hand in order not to be compelled to force the sale of their production."

MINING NEWS.

*** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

Transvaal Gold Returns.—The gold output for Novembe from the Witwatersrand mines was 530,215 ozs., and from the outside districts 19,586 ozs., giving a total of 549,801 ozs., worth £2,335,406 as compared with 553,553 ozs. valued at £2,351,344 in October, which contained a day more. The subjoined tables show the output and values for the past six years.

Native and Coolie Labour.—The returns for November show that the natives distributed to the mines by the Witwatersrand Native Labour Association numbered 10,990 as against 7,091 lost by time expiration and other wastage, making the gain for the month 3,899, and increasing the number of "boys"

employed to 103,599. In the subjoined table are shown the number of natives and Chinese employed on the Rand during the past year:

Month.	Natives Joined.	Natives Left.	Nett Gain or Loss.	Natives Employed end of Month.	Chinese.
November, 1906	9,661	6,919	2,142	78,177	53,024

OCEANA CONSOLIDATED.—This is nominally a South African venture, as all the world knows, and its principal interests are still in that region, but its peregrinations extend to the uttermost ends of the earth, and it is willing to turn an honest penny in Egypt or the Soudan, Nyassaland, Abyssinia, West Africa, or Australia. China and Japan have somehow been overlooked. But there is a vast difference between willingness and capacity to earn profits, and there is a most distressing emptiness about the report for the twelve months ended June 30 last. **It contains a good deal of reading matter, there can be no particular complaint on that score, but so far as the company's own operations are concerned, very little progress is** made in turning the vast interests to account. It managed to get a certain amount of revenue from holdings in other ventures, and out of an income of £45,030 saved £21,092. A reserve against depreciation of assets, £100,000, is brought into **the profit and loss account, together with £13,467 brought forward**, making a total of £135,158. In order to see how this is dealt with, we must turn to the report, as the directors use no less than four and a-half lines in explaining a loss of £135,158. Here is the way it is done:—"The continuation of the fall in the level of Lake Nyassa, due to phenomenal causes, has practically rendered the Shire River unnavigable, and so destroyed our flotilla business. Your directors therefore decided to deal with this loss by writing off the sum of £135,158, which has been provided by transferring £100,000 from reserve account against depreciation of assets to appropriation account." This brings the reserve account down to £100,000, and the company's investments add up to the nice little sum of £1,311,375, the quoted securities being £970,237 and the unquoted £341,137. What is their value? The directors do not breathe a word except to talk about the crises in Egypt, the United States, and the principal centres of business in Europe, which have caused a further considerable decline in the value of securities. "The accentuation during the year of this depression has rendered it undesirable to realise the company's holdings at the low prices ruling." Perhaps "impossible" would be a more accurate description than "undesirable," and we are glad to see the auditors doing their duty to the shareholders, and saying "that the values attached to the investments and the steamers and Chiromo and Govuro assets are introduced on the responsibility of the directors, and are subject to realisation." The steamers, &c., are now put down in the balance-sheet at £84,004, and among other assets that may be noted are land in the Transvaal, **mineral rights included, £224,230**, town sites, buildings, &c., £84,264, cash £8,500, Consols at cost £88,541 —what are they worth now?—loans against Stock Exchange securities £57,020, loans to various companies and others against securities £66,747, and debtors £57,482. On the other hand, the company has raised loans for £142,000 on mortgage and owes £14,514 to sundry creditors or on bills payable. In the circumstances, the somewhat turbulent scenes that took place at the meeting on Thursday of last week were hardly a matter of surprise, and although the proposal laid by the board easily got rid of an amendment for the appointment of a committee to report upon the assets and management, the directors agreed to meet a committee of five to consider the desirability of publishing a list of the assets.

TRANSVAAL ESTATES AND DEVELOPMENT.—A few book entries and hey presto, this company's reserve fund of £75,000 vanishes into thin air. For some years past the necessity of making provision to meet continued depreciation has swallowed up all the profits, and the directors now take the bull by the horns, and bring things down to a point that ought to render unnecessary any further allocation, so that future profits will be rendered available for dividends or the creation of a liquid reserve, according to circumstances. Stands and buildings have been reduced by £34,001 and stocks and shares by £38,800, while £4,138 has been set aside as a reserve on mortgages. Pleased are we to see that the investments have been taken into the **balance-sheet at prices substantially below those ruling on the market, and several items of minor consequence have been** entirely written off. The directors say that the amount outstanding on mortgage after the provision referred to may be re**garded as fully secured. That is good, and we should be de**lighted to find the company in sight of the dividend stage, more particularly for the sake of those who bought at high prices, the present figure being under 10s. for the 5s. shares. Revenue in the year to September 30 was £25,018, and the outlay £11,504, leaving £14,425 nett to go on to that brought in, making £15,189, to be carried out. **The general finances are not in bad shape,** and Stock Exchange loans £48,430 are worth something these days.

ANGLO-FRENCH MATABELELAND.—An effort has been made during the year to May 31 to render the balance-sheet of this **enterprise a less visionary affair by utilising share premiums** to the amount of £58,820 in the reduction of a large variety of **assets. No less than a dozen items are reduced, the principal amounts written off being £10,387 against the Penhalonga Pro**prietary shares, £6,000 against Rhodesia Railways debentures, £8,576 against Rezende shares, £17,445 against the development at Belingwe, and £7,294 to get rid of the debit at profit and loss. **The directors are now of opinion that the assets are fully repre**sented by the amount to which they have been written down—namely debentures and shares £77,286, properties £13,760, debtors £1,377, buildings £180, surface improvements (as they **ought to be worth that much), plant and machinery £745 and** stores, &c., £592. A good many claims have been abandoned during the year, but the farm holdings remain at 61 or an **approximate area of 366,000 acres. Final titles have now been obtained for all the land owned with the exception of one farm, where rights will be exercised in case of a favourable reaction in** landed property. Some tributing business has been done with fairly satisfactory results. Total revenue gathered in the past twelve months was £4,400, and the expenditure came to £4,881, **leaving a debit of £481, which together with that previously existing, has been written off, as already mentioned.**

BATTLEFIELDS (RHODESIA).—This is one of the few Rhodesian producing mines, and in the year to June 30 the tonnage crushed was 10,421 yielding 11,360 ozs. while 11,360 tons of tailings gave 6,258 ozs. and 1,170 tons of slimes 269 ozs. Amount realised was £59,407 and the working costs came to £23,511 leaving **£35,955 nett. Transfer and other fees and interest and farm rents gave £2,029, and after providing for development redemption at 9s. per ton, depreciation and general expenses, there was a balance left of £22,668. Add £4,470 brought in, and the dis**posable credit is £27,138, of which £19,080 will be absorbed by **the 2s. dividend proposed leaving £7,149 to be carried forward. Ore reserves are put at 23,602 tons, and in addition there are** some 6,347 tons of ore developed below the second level in the Inkerman, making a total of 29,949 tons, or sufficient to supply the present reduction plant for 18 months at the present rate of **1,600 tons per month. The consulting engineer, however, re**commends a further extension to the reduction plant with a view to treating a larger quantity of ore and reducing working costs. These for the past year were 28s. 7.03d. per ton, being a decrease of 12s. 8.37d. per ton against the period covered by the previous report. On the advice of the engineers and general manager, the directors have abandoned 50 claims, which will considerably reduce the monthly expenditure on licences, &c.

LE ROI MINING.—It is impossible not to feel the keenest disappointment about the results presented to the shareholders in this concern for the year to June 30 last. We do not want to hark back to ancient history, but certainly expected something better from the substitution of the present board and managing director for Sir Henry Lider and Co. There is still no doubt that this move was a right and proper one, but just because we supported the shareholders in the latter's views we are not going to make any pretence of satisfaction with the report now issued. No doubt the value of ore fell off, that is a thing that no one can avoid, and that the company had severe difficulties to contend against in the way of labour troubles and shortage of fuel, but the fact remains that the total revenue was only £170,348 against £268,247, and to the extent of £71,881 (ores at mine and mine at surface on hand and in transit, as estimated by the company's officials). Ore production cost £109,638 and smelting £34,38, the entire cargo being

within £3,583 of the income, a very trifling margin of profit, and less by £33,555 compared with the previous year, when some heavy exceptional charges had to be provided. The credit is added to the balance of £150,927 brought in, making £154,510, and there is no recommendation as to dividend, although there is a surplus of liquid assets over liabilities of £74,260. The directors tell us that the profits have been lessened by the heavy fall in the price of copper, which seriously affected the realisation of stocks in transit and in hand at June 30. This is all very well, but the average price of copper for the year must have been very high, and we ought to know on what basis the unrealised stocks are taken. Ore treated was 131,696 tons, an increase of 21,654 tons, but the value was nearly two dollars less, so there was not much in it between the two years. It seems that the Trail smelter contract of October, 1905, entered into by the late board was cancelled during the year, and shipments to Trail ceased in April last. The Northport smelter, after being closed down for about 15 months, recommenced operations towards the end of December last, and continued running until January 25, when it was shut down until February 28, on account of transportation difficulties and fuel shortage. During the period under review there was only a continuous run of four months at the smelter. A good deal of development work has been carried on during the year, and while values were generally low, bodies of high grade ore are encountered from time to time. In future the accounts will be closed on September 30 instead of June 30. Some explanation might have been given in the report of an alteration in the articles relating to directors' fees.

Commonwealth Oil Corporation, Limited.—The second annual report to June 30 states that the large amount of prospecting work carried out in order to comply with the labour conditions upon various portions of the properties before the amalgamation of the leases took place has proved enormous reserves of shale. These are estimated by the consulting engineer to be not less than 20,000,000 tons, and, so far as proved, the quality has been found to be exceptionally high, frequently averaging over 120 gallons of oil per ton. Tunnels have been driven both in the Wolgan and Capertee Valleys, extending to upwards of 12,000 ft. in length through unbroken shale, while outcrops have been traced continuously for about four miles on each side of the mountain. The proved area of the shale field now amounts to about 18 square miles, or approximately one-half of the company's property. Further developments have shown the coal bed to extend as regularly as the shale, and coke of good quality, suitable for smelting purposes having been produced, negotiations have been entered into with the Great Cobar Company and others for a supply of 700 to 1,000 tons per week. The railway is now in working operation, and trains are regularly running to and from the properties. As the Government of New South Wales insisted that the line should eventually be available for public use, it became necessary to improve the line to deal with passenger traffic, but the directors feel assured that the extra outlay entailed will be fully repaid by the returns. According to the balance-sheet, out of a total capital of £575,500 (including £493 from calls paid in advance), £318,885 has been spent on properties, £94,300 on railway construction and rolling stock, £38,335 on plant, machinery, &c., and £35,485 on development, prospecting, and surveying. In addition, £42,000 was given for the undertaking of the New South Wales Shale and Oil Company, of which £12,500 is still to be paid, and £26,108 was advanced to that company on account of current expenses and new capital expenditure. Administrative and general expenses for two years—to be allocated when construction work is completed—less bank interest, &c., amount to £22,768, and preliminary expenses stand at £5,850, while cash comes to £23,314 against liabilities to sundry creditors of £13,431 and a profit of £7,256 derived from the investment in the New South Wales Shale and Oil Company.

Pahang Consolidated.—The shares of this company, an amalgamation of the old Pahang Corporation and Pahang Kabang, have been the centre of much excitement during the past few months. Their nominal value is 5s., and they were run up to we do not know how many hundreds per cent. premium. A severe slump from the top has taken place, but even now the quotation is round 30s. The mine manager's report issued last month was not a very inspiriting affair, and the directors' statement for the thirteen months to July 31 last does not send us wild with enthusiasm. Ore reserves are estimated at 191,550 tons assaying 3.2 per cent., and therefore containing over 6,000 tons oxide. This is separate from 4,885 tons of ore at the surface. The battery now in course of erection consists of 50 head of 1,250 lb. stamps, and the superintendent estimates that these will be capable of crushing 7,000 tons of ore per month. Meanwhile the finances are not of the best. The company has sundry creditors and bills payable aggregating £16,426, and owes £7,151 for plant, machinery and stores, not incorporated in the balance-sheet, a total of £23,577. Against this the cash and sundry debtors are only £19,305, and the directors will be glad when calls in arrear £6,903 come in. The final 6d. per share, producing £10,350, has also to be received. Underwriting and preliminary expenses came to the nice little sum of £14,199, the underwriters getting 50,000 fully-paid shares of 5s. each, which could be sold for a considerable fortune. On the other hand, share premium account gave £4,098, reducing the item to £10,101. Capital expenditure in the period was on a considerable scale, plant and machinery now appearing at £37,513 compared with £13,547, tramway construction and equipment at £17,054 and shaft-sinking, development, general expenses, &c., at £38,450, while the property account is £49,663.

Mount Lyell Mining and Railway.—The cabled summary of this company's report for the half-year ended September 30 gave fairly full details of the actual results, although, as we remarked at the time, there were points that needed clearing up. This was done in a subsequent cable, and now that the full statement has been received there is little to add. Since the last report the developments in the North Mount Lyell have been very satisfactory. Not only has exploration work fully justified the anticipations previously expressed in respect of the 850 ft. level, but in various other levels the ore bodies have proved to be of larger extent than formerly estimated. It is now fully ascertained, states the report, that at the 850 ft. level the ore body is as large as at the 700 ft. level, and the average metallic value of the ore is equally good. The appearance of the ore body at the 850 ft. level is such as to justify the expectation that it will be met with at the 1,000 ft. level. Towards the close of the half-year the main shaft and the No. 1 engine winze were both approaching the 1,000 ft. level, and since that date opening out sets are being put in to permit of operations there.

Oroya Black Range.—This company's report covers the period from incorporation on May 18, 1906, to August 31, 1907, and the principal work carried out during this period has been the sinking of the main incline shaft and the installation of an ore reduction plant. Both of these operations have been attended with very satisfactory results, and the general manager's estimate that the development of the mine to date has resulted in sufficient ore being opened up to maintain the present monthly output for two years. The ore reduction plant consists of a 20-stamp mill, with accessory plant. The new mill started crushing on July 15, and has run continuously with gradually increasing efficiency. Up to the end of October the ore treated was 11,681 tons yielding 6,917 ozs. valued at £29,379 against working expenses of £14,954, first returns which may be regarded as fairly satisfactory. Sum spent in respect of plant, machinery, and buildings is £34,487, and the balance of the general expenditure and mine development account after crediting the proceeds of gold from the first clean-up of the mill amounts to £22,111, and has been carried forward. The Oroya Brownhill Company has advanced £20,049, which will be repaid from profits.

Sudan Gold Field.—This company's third annual report is made up to June 30 last, and shows an outlay on account of mining and general expenditure of £21,876. In addition £5,177 has been spent on buildings, machinery and plant, £357 on railway, plant, and rolling stock, and £788 on surface and mine works. On June 30 last 15s. per share had been called up on the 155,000 working capital shares leaving £38,750 still to come in apart from calls in arrear £3,627. Cash at bank, &c., was £1,253, making total resources of £43,630 against which £100 has been received in anticipation of calls and £993 is owing to sundry creditors leaving a balance of working capital of £42,531. According to the superintendent's report the main features of the year have been the opening up of a good chute of ore at the 240 ft. level, the striking of a good reef at other points at the same level and the cutting of the reef at the 360 ft. level. The supply of native labour has continued satisfactory, and the directors are able to report further improvement in the water supply which has enabled the company to carry on operations on a scale hitherto impossible. A 10-stamp mill has been purchased from a neighbouring property, and it is hoped that milling operations may be commenced by May next when two years of ore in sight is anticipated.

NEXT WEEK'S MEETINGS.

Monday, December 23.

Australasian Mortgage and Agency.—Edinburgh, 12.30 p.m.
Bretts Patent Sifter.—Coventry, 11 a.m.
British and Argentine Corporation. — Cannon Street Hotel, 2.30 p.m.
Canada Company.—1, East India Avenue, 1.30 p.m.
Darracq-Serpollet Omnibus.—Salisbury House, noon.
Ind, Coope and Co.—Great Eastern Hotel, E.C., 12.30 p.m.
Le Roi Mining.—Salisbury House, 2.30 p.m.
Paraguay Central Railway.—35, New Broad Street, E.C., 1 p.m.
South American Goldfields.—Salisbury House, noon.
Underground Electric Railway of London.—Hamilton House, noon.
Westralia and East Extension Mines.—1, Metal Exchange Buildings, E.C., noon.

RAILWAY TRAFFIC RETURNS.

FOREIGN

Alberta Railway and Irrigation.—Earnings for the week ended Dec 14, $6,379, increase $2,613; aggregate from July 1, $127,274.

Argentine North Eastern.—Traffic receipts for week ended November 15, £2,949, decrease £391; aggregate from July 1, £58,436, decrease £2,775.

Assam Bengal.—Traffic receipts for week ended November 16, Rs. 1,02,246, increase Rs. 3,038; aggregate from July 1, Rs. 19,58,549, increase Rs. 1,07,667.

Bilbao River and Cantabrian.—Traffic returns for November, £9,071, decrease £2,123; aggregate from January 1, £100,047, decrease £12,676.

Buenos Ayres Central.—Gross receipts for November £9,341, decrease £204; aggregate from Jan. 1, £122,983, increase £12,321.

Canadian Northern Railway.—Traffic receipts for week ended Dec. 14, $190,700, increase $69,300; total from July 1, $4,886,300, increase $1,259,500.

Egyptian Delta.—Traffic receipts for week ended November 30, £6,897, increase £372; aggregate from January 1, £178,667, increase £18,663.

Lucknow Bareilly Railway.—Traffic receipts for week ended November 16, Rs. 24,059, decrease Rs. 8,158; aggregate from July 1, Rs. 5,13,738, increase Rs. 28,885.

Midland Uruguay.—Receipts for month of November, £6,600, increase £787, aggregate from July 1, £30,377, increase £3,135.

North Western of Uruguay.—Traffic receipts for Nov., $20,000, decrease $965; aggregate from July 1, $106,256, increase $5,319.

Quebec Central Railway.—Traffic receipts for the 2nd week of December, $14,776, increase $4,877; aggregate from January 1, $967,685, increase $100,113.

Quebec and Lake St. John.—Traffic receipts for Sept. $65,604, increase $3,149; aggregate $471,220, increase $52,696.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended November 16, Rs. 19,695, increase Rs. 751; aggregate from July 1, Rs. 4,34,594, increase Rs. 45,511.

Uruguay Northern.—Gross receipts for month of Aug., £1,592, decrease £227; aggregate from July 1, £5,267, decrease £121.

White Pass and Yukon Railway.—Traffic receipts for week ended November 30 amounted to $1,300.

ENGLISH.

Cleator and Workington Junction.—Receipts for week ending December 14, £1,514, increase £20; aggregate from July 1, £32,406, increase £1,596.

Cockermouth and Keswick Railway.—Receipts for week ending December 14, £753, increase £33; aggregate from July 1, £22,956, increase £923.

East London Railway.—Traffic receipts for September, £3,625, decrease £377.

East and West Yorkshire Union Railways.—Traffic receipts for the week ended December 14, £487, increase £33; aggregate from July 1, £10,603, increase £1,874.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Bath Electric.—Traffic receipts for week ending December 11, £594, decrease £20; aggregate from Jan. 1, £39,149, decrease £1,804.

Blessington and Poulaphouca.—Traffic receipts for week ending December 11, £6, decrease £2; aggregate from July 1, £502, decrease £60.

Bristol Tramways and Carriage.—Traffic receipts for week ending December 13, £4,462, decrease £81; aggregate from July 1, £124,087, decrease £870.

British Electric Traction.—Receipts of all the Associated Companies for the week ending December 13, £26,040, 425 miles.

Burnley Corporation.—Traffic receipts for week ending December 14, £1,187, increase £33, aggregate from July 1, £30,508, increase £1,428.

Dublin and Blessington.—Traffic receipts for week ending December 11, £104, increase £5; aggregate from July 1, £3,522, decrease £100.

Dublin and Lucan.—Traffic receipts for week ending December 13, £87, decrease £6; aggregate from July 1, £3,190, increase £216.

Dublin United.—Traffic receipts for week ending December 13, £4,777, increase £160, aggregate from July 1, £157,414, increase £31,079.

Edinburgh and District.—Traffic receipts for week ending December 14, £4,525, increase £281; aggregate from January 1, 1907, £247,496, increase £2,004.

Hastings and District.—Traffic receipts for week ending December 12, £740.

Isle of Thanet.—Traffic receipts for week ending December 14, £216, decrease £1; aggregate from Oct. 1, £3,389, increase £73.

London County Council.—Traffic receipts for week ending December 7, £30,357, increase £4,707; aggregate from April 1, £1,131,236, increase £187,352. Miles 115¾, against 113¾.

London General Omnibus.—Traffic receipts for week ending December 14, £18,566, decrease £1,021; aggregate from July 1, £494,156, decrease £9,644.

London Road Car.—Traffic receipts for week ending December 14, £7,708, increase £825, aggregate from July 1, £205,172, increase £18,222.

London United.—Traffic receipts for week ending December 13, £5,342, increase £429; aggregate from January 1, £321,845, increase £13,712.

Provincial Trams.—Traffic receipts for week ending Dec. 14, £1,373, increase £65, aggregate from Oct. 1, £16,124, increase £665.

Rossendale Valley.—Traffic receipts for week ending December 13, £195, increase £13.

Sunderland District.—Traffic receipts for week ending December 11, £466, increase £83; aggregate from Jan. 1, £ [illegible] increase £2,554.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending December 15, £1,023, increase £157, aggregate from January 1, £57,947.

FOREIGN

Anglo-Argentine.—Traffic receipts for week ending December 15, £18,980, increase £1,595; aggregate from January 1, £ [illegible], increase £79,605.

Auckland Electric.—Traffic receipts for four weeks ending November 8, £10,674, increase £946; aggregate from January 1, £114,563, increase £5,001.

Brisbane.—Traffic receipts for month of November, 1907, £13,570, increase £1,731.

British Columbia Electric.—Nett earnings for October $7 [illegible], increase $24,629. Aggregate nett earnings (including [illegible] from investments from July 1 to October 31, $440,49[illegible].

Buenos Ayres Grand National and Nos. Trams.—Traffic receipts for week ending December 16, £7,082.

Calcutta.—Traffic receipts for week ending December 14, Rs. 48,206, decrease Rs. 3,220; aggregate from January 1, Rs. 24,11,361, increase Rs. 1,69,585.

Cape Electric.—Traffic revenue for month of November, Cape Town, £9,826, Port Elizabeth, £1,707.

Carthagena and Hermosa.—Traffic receipts for the month of November, £2,768, decrease £2,480, total from January 1 £ [illegible], increase £856.

Geneva Trams.—Earnings for November, fr 18[illegible] increase fr 8,024.

Kalgoorlie Electric.—Traffic receipts for November, £3 [illegible], aggregate from January 1, £43,715.

Lisbon Electric.—Earnings for November, milreis 4[illegible]

Madras Electric.—Traffic receipts for fortnight ended December 15, Rs. 18,348, increase 22 per cent.; aggregate from January 1, Rs. 3,96,465, increase 20 per cent.

Melbourne Tramways and Omnibus.—Traffic receipts for November, £53,500.

Mexico.—Nett earnings for month of September, $[illegible], increase $21,796; aggregate nett earnings from January 1, $1,545,283, increase $93,126.

Perth (W.A.) Electric.—Traffic receipts for week ended December 13, £1,412, decrease £342; aggregate from January 1, £70,054, decrease £2,676.

Rio de Janeiro.—Nett earnings for October, $[illegible], aggregate from January 1, $1,738,326.

Sao Paulo.—Traffic returns for October: nett earnings, $113,680, increase $12,630, aggregate from Jan. 1, $1 [illegible], increase $10,754.

Twin City Rapid.—Traffic receipts for the month of October, $515,177, increase $41,356, aggregate from January 1 $[illegible], increase $364,102. Nett traffic receipts, $[illegible], aggregate $12,205; aggregate from January 1, $2 [illegible], increase $[illegible].

The Investors' Review.

The Week's Money Market.

Bank Rate 7 per cent. (Raised from 5½ per cent. to 6 per cent. on Monday, November 4, and from 6 per cent. to 7 per cent. on Thursday, November 7.)

Norfolk House, Friday Evening.

Notwithstanding the discrepancy between market rates and Bank rate no surprise was felt that 7 per cent. was maintained by the Bank directors on Thursday. The weakness in open market rates is due more than anything else to the large supplies of Japanese money which have been lent into January at comparatively low rates. Floating balances have accordingly been abundant all week, in spite of the drain of currency to the provinces usual at this time of year. Seven-day loans have been obtainable at 4½ per cent., and call money has sometimes gone below 4 per cent. Generally speaking, however, 4 to 4½ per cent. has been the rate for it, and money into January has been procurable by strong borrowers at 5½ per cent. This facility has naturally helped to keep discount rates down. Nominally the quotation of three months' bank bills has been 5⅞ to 6 per cent. all week, but business has sometimes been done $\frac{1}{16}$ under 5⅞ per cent., and those who can get money at the lower rates named into the new year, which they can do from the India Council if nowhere else, are carrying their bills instead of putting them on the discount market. There was a little greater firmness to-day thanks to the withdrawal of about £600,000 by the Japanese Government agents, who have bought most of the renewal Treasury bills. The expired bills were not in Japanese hands to the same extent, but this can only be a credit gyration. It is the disappearance of cash which brings the pinch, and cash is going to be pretty hard to come by next week. Those, therefore, of the bankers or bill brokers who really worked to-day charged 6 per cent. on three months' remitted paper. We hear, however, that properly mixed parcels of three, four and six months' bills of this class can be discounted at 4½ per cent.

It is a pity that market discount should be so far below Bank rate, because there has been no improvement whatever in the essential elements governing money and credit. Even if we regard the changes in the Bank return this week as merely temporary and incident to the end of the year, the dominant fact is not thereby altered. It is that a 7 per cent. Bank rate is as ineffective to-day as it was when imposed on November 7, to draw gold into the country. In spite of it there would have been a nett loss of £374,000 in the Bank's stock of gold this week had it not been for the release of another £500,000 by the Simla Government. That, as we have explained, is no proof of the attractive power of the Bank rate; it merely disguises what is going on. Not only is the Bank beginning to be pulled upon by South America, but it has had to suffer further withdrawals from the United States during the week, in spite of the fact that about £500,000 of the raw gold offered in the open market on Monday was bought for that destination. So keen was the demand that the price went up ¾d. to 77s. 11½d. per oz., where it remains. The £500,000 or so to be on hand next week from South Africa will therefore in all probability also go. Foreign exchanges are not moving in favour of this country anywhere with any satisfactory speed or to the requisite extent. The Paris cheque is still only about 25.20½, and the date is rapidly approaching when we shall have to return that £3,500,000 of gold to the Bank of France. To-morrow, moreover, about £1,000,000 will go to the States, including all that has been picked up in the open market, the Australian parcel of £300,000 in to-day and a small amount withdrawn from the Bank. It is nonsense in these circumstances to talk of the American gold drain having stopped.

Although money has been cheap enough on short loan, the Bank return indicates that borrowers will have to go to it next week, and it will most likely charge them 7½ per cent. for advances into the new year. It certainly ought to do so were it only to give the open market a warning. Other deposits have receded £1,533,000 and are now down to £43,489,000, which is very little above the poverty limit; and but for the Japanese balances we feel sure that the open market resources would already have been quite drained away. Within the week, however, £322,000 has been redeemed on other securities. The reserve is down by £1,275,000, in spite of the slight increase of £126,000 in the gold, thanks to the Indian supply, because currency has been drained away by internal demands, the decrease in coin being £1,213,000 and in notes £188,000 compared with the previous week.

Abroad there are just as few signs of amelioration as here. The Bank of France makes next to no progress in strengthening its position. All the gold added to its stock this week has only amounted to £61,000, and the further decrease in the active note circulation has been less than £10,000. Almost equally insignificant is the improvement in the position of the German Reichsbank, whose note circulation according to the last return is still £9,770,000 above the legal maximum. It is true that there has been a decline of about £650,000 in this excess between the date of the return and the previous one; but the end of the year is at hand when the customary expansion is certain to take place in the active note circulation, and with that in view it is a matter for surprise that the Reichsbank rate remains at 7½ per cent.

Unless relief comes from somewhere, it appears to us well-nigh certain that an advance must take place soon. And from what quarter can relief come? Russia alone seems to have any gold to give away, but even Russia dare not deplete its bank balances much further, lest its Government should increase the difficulties in the way of negotiating that new loan. As it is, the last return of the Imperial Bank of Russia shows a decrease of nearly £900,000 in the gold reserve held by it abroad. No compensation whatever is found for this in the domestic bullion movements, which show an increase of little more than £17,000 in the gold held. It is useless to look elsewhere. No single European market is in a position to assist another, and ours is apparently amongst the most helpless of them all. What is a reasonable being to infer from facts like these, if not that we remain as much in danger as we did in the beginning of November of a further advance in the Bank of England rate? The directors dare not allow the market to drift much further, lest their inertia should bring a 10 per cent. rate upon us. At whatever cost, gold must be pulled in between now and the date when we have to refund what was borrowed from the Bank of France.

Silver.

The fall in silver values continued throughout the greater part of the week, and by Wednesday prices had dropped to 24 $\frac{3}{16}$d. per oz. for cash and 24 $\frac{7}{16}$d. per

oz. for delivery two months forward, or the lowest figure since June 15, 1903. Messrs. Samuel Montagu and Co. report that with the exception of the Washington Treasury it seemed impossible to find an actual consumer of the metal in appreciable quantities. Even the manufacturers of silver goods complain that trade is slacker than usual, and that the high Bank rate deters them from replenishing their stocks. On Thursday the "bears" scrambled in in a hurry, and sent quotations flying up to 25 1/16d. and 25 3/8d. per oz.; but the recovery was too rapid, and even before the day ended business could be done at 1/4d. below these rates, while to-day the metal, after being fixed at 24 9/16d. and 24 7/8d., further relapsed to 24 7/16d. and 24 3/4d. A rather better inquiry was experienced for the Rs. 20,00,000 of Council drafts in India last Wednesday, when applications amounted to Rs. 25,70,000, all in bills, and the whole sum was allotted, tenders at 1s. 3 29-32d. per rupee receiving about 77 per cent. The amount to be offered next week is increased to Rs. 25,00,000.

The Stock Markets.

It is again unnecessary to say much about markets. In one sense the less said the better, for although members of the Stock Exchange do their best to keep their spirits up no essential improvement has taken place in the outlook or actual position. We do not see where an improvement of a lasting description is to begin while simulation, make-believe and confidence based upon misapprehension or ignorance remain dominant in the public mind. Had circumstances been ordinary this should have been a good buying time. It always was in former days, and shrewd people used to buy Home Railways towards the end of the year when prices were depressed by dear money, and sell them again in the spring when money has become cheap. There is not much chance of profits on an operation of this kind just now, for next year is going to be worse than this. Every market is engaged in holding up its securities, and that is a very exhausting occupation when money is dear and when the public does not come forward to buy.

The public does buy a little here, more than it should in some quarters, and it will therefore get bitten presently by its unreasoning trustfulness. It is not, however, buying enough anywhere to relieve the institutions and market leaders, who are spending their last spare resources in maintaining a show of activity or struggling to make money at each other's expense. So in spite of every effort markets have been heavy this week, at best listless, and seldom really firm. Indeed, the only strong large division of the Stock Exchange list has been that for Argentine Railways, and nearly everywhere else losses predominate on a comparison of prices for the week. Dear money, in other words, is beating the most inveterate bull, and also the giant manipulator whose strength is being taxed in some cases beyond much longer endurance. So we look for many sensations in the new year, and think it will be much more fertile in surprises than the one now closing has been.

BRITISH FUNDS AND OTHER TRUSTEE STOCKS.

There has been almost no movement at all in the Domestic Municipal list, but Government stocks have been weak as well as India stocks. Consols have only lost 2s. 6d. on the week for cash, but Local Loans stock is down ½, and all the sterling stocks of the Simla Government have receded ¼ to ½. Bank of England stock, however, has been conspicuously firm, and London County stocks have not gone back further. Steadiness has also characterised the market for

Colonial stocks, and the changes there are seldom adverse. No movement has taken place in the older loans of Cape Colony, but we hear the public is buying the new Cape loan under the idea that it is cheap. It is not cheap, and they had better leave it alone. Applicants for the new Canadian loan have received allotments in full. In Foreign and Colonial Municipal securities a welcome recovery has to be noted in Johannesburg stock and in the stock of the Rand Water Board. The rare changes all through are better in this division, and quite a jump has taken place in the various issues of the City of Rosario.

Foreign Government Stocks.

A good business has gone on in Japanese 4½ per cents., and the buying has fairly kept pace with the selling, so that prices are almost where they were. Paris has been busy with Russian bonds during the week, and their firmness has helped to give an appearance of strength to the Bourse, but here prices have just been maintained and no more, with business languid. Argentine bonds have hardened, especially the 4 per cents. and the Buenos Ayres Provincial bonds. Most Chinese issues, too, are firmer except the Silver loan, and some trifling recovery has occurred both in German 3 per cents and Italian Rente. For all that dealings have been restricted enough, and there is really nothing to dwell upon. No further relapse has occurred in Chilian bonds, but Brazilian are dull.

Home Railway Stocks.

The spurt of speculation induced by rumours about the Great Northern and Great Central transaction quite exhausted itself in the end of last week, and the result of the publishing of the terms of agreement has been weakness in the stocks of both companies, especially in Great Central preferred and deferred which have relapsed sharply as they deserve to do. This weakened the Home Railway market throughout, and scarcely a stock in the list has betrayed any elasticity. Great Northern "A," however, is slightly up on the week. So is Taff Vale ordinary, but South-Eastern ordinary is down 2 and North-Western, Lancashire and Yorkshire and South-Western ordinary are all 1 lower, the other declines being mere fractions. Amongst privileged securities the principal changes have been a further rally in the lower preferences of the Great Central and in District 3 per cent. rent charge stock, but District 6 per cent. debenture stock has fallen 8. Traffic receipts continue to slow down, and were only £21,242 larger last week, according to the *Railway News*, than a year ago. This is an increase of about £1 per mile on the week for the whole of the railways of the kingdom, and brings the total for the 24 weeks up to £53,988,041 or an increase of £1,617,902.

Indian and Colonial Railway Stocks.

The rare changes amongst Indian Railways are generally to the good, and business is as colourless as ever. Less violence has been noticeable in the Canadian Pacific gamble, and on the week the battle between "bulls" and "bears" is a drawn one, but sometimes the "bulls" gained on the day and sometimes the "bears." The traffic show was brave, returning emigrants doubtless helping to swell the figures. Grand Trunk lower stocks have also been quiet and lifeless enough, with just a slight recoil on the week. Nothing else calls for notice.

United States Railroad Securities.

Not all the dividend declarations and reassuring messages about trade, traffics and so forth, have succeeded in putting pith into the market for Yankee Railroad shares. Prices are down on the week in almost every instance, and sometimes distressingly flat. Thus the preferred stock of the Milwaukee and St. Paul road is $5 lower than it was a week ago, and Great Northern preferred, Northern Pacific ordinary, Southern Pacific common and Southern preference stocks have all suffered more or less severely as well as Southern Pacific common, New York Central, Louisville, Milwaukee ordinary and Atchison and Baltimore common. It is curious to find Louisville ordinary shares down $4 in spite of the declaration of the "regular" 6 per cent. dividend, and New York Central has not been helped in the slightest by the brilliant dividend displays made by its board. Bonds also have mostly gone down where they have altered, although insurance companies here are investing in securities of that class, not always with discretion so far as we can hear. Several Pennsylvania Railroad issues are prominently flat, especially the ten-year bonds due in 1912.

Foreign Railway Stocks.

The firmest of all Railroad markets has been that for the Argentine group, and improvements of 2 to 3 have been brought about in all the leading issues, and even in secondary things like Cordoba Central income stock and the ordinary and second preference stocks of the Entre Rios Company. The firmness has extended to Buenos Ayres and Pacific second preference stock, the second debenture stock of the Great Western Company, and the two preferences of the Cordoba and Rosario Company. Cordoba and North-Western debentures are even 4 higher, with a very fair business in them as things go. This week's news about Antofagasta stock has not done much to steady the market, and the deferred was dealt in yesterday as low as 112¾. The company's other stocks, however, have been steady, and selling has obviously stopped in them. Mexican Railway stocks have been hoisted regardless of the weakness of the silver market, which might have unpleasant consequences for the finances of the Republic, but the business has never been voluminous. Elsewhere changes are of little significance.

Bank, Brewery and Dock Stocks.

Trade has been narrow to a degree in Bank shares, which are accordingly for the most part where they were a week ago, with the noticeable exception of another decline in Hongkong and Shanghai shares, due to the sudden jump a fortnight ago. On the whole, the market for the shares of English banks has been firm. Brewery securities are also left alone, and although there was quite a rally in Allsopp 3½ and 4 per cent. debenture stocks on the shareholders' meeting, the trust certificates have been flat. Selling, we should judge, is not easy anywhere in this market. Ind, Coope's debenture stocks have been knocked down, partly by the disagreeable circulars received by the shareholders. We are not at all surprised that holders should be prompted to sell, for the outlook there is black enough. Frank Jones' brewing debentures also keep tumbling, and Whitbread's stocks are all flat except the "B" debenture, which has not moved. Dock securities, on the other hand, have been steady, with some advance in London Docks preferred and deferred, and in the 5 per cent. debenture stock of the Millwall Company.

Commercial and Industrial Section.

The first change that catches the eye in looking down the long array of Commercial securities is a recovery of 2½ in Anglo-Russian Cotton Factories' debentures, which are back almost at par, and that is really the best thing in the whole list so far as gains go, although the debenture stock of the Imperial Tobacco Company has also been in demand at improving prices, and one or two of the Savoy Hotel debenture issues are quoted some pounds better. Dalgety 4 per cent. debenture stock has also been put up. The mass of the changes here, however, are of a distressing kind. Argyll Motors debenture stock is marked down to with nothing doing at Leeds. The stocks of the Artisans' Dwellings Company are also flat and well-nigh unmarketable. Portland Cement shares and debentures have further receded. British Westinghouse debentures stock is now marked 45-55, and unsaleable at the lower figure. Eastman Kodak shares have receded a further $10. India Rubber and Telegraph Works shares have kept firm, but Nitrate shares have been offered, and many of them are down a little. Nobel Dynamite shares are also weaker, and the only other change in the list worth

indicating is rather a distinct improvement in United Alkali preference shares. Waring and Gillow's preference are also slightly harder.

ELECTRIC, TRUST, GAS AND INSURANCE STOCKS.

Nothing at all striking happened amongst Electric securities, and business has been at a standstill in most of them. One or two buying orders, however, lifted Canadian General Electric common shares to 101. Hudson's Bay shares have kept steady, but Canada North-West Land shares are down $10. Peruvian Corporation stocks have not had time to be affected on the week by the report, which is just as poor as people looked for. Profit is down over £12,000 and only £50,000 is put to reserve against £75,000 a year ago, and about £15,000 has been taken from the nett revenue balance against only about £1,000 a year back. The extra 2 per cent., however, is again paid on the debentures, which are up on the week. The shares of Argentine Land companies continue strong and in some demand. Financial Trust stocks, too, have been steadier on the whole, but quite out of the running. Gas stocks are steady with now and then a bargain transacted, and the changes amongst Insurance shares are rather mixed, the most noticeable being a jump of 3 in British and Foreign Marine shares on amalgamation rumours, mentioned elsewhere. Merchants' Marine shares have also risen for a like reason.

IRON, COAL AND STEEL AND OTHER GROUPS.

The largest movements amongst Iron, Coal and Steel stocks have been relapses of 2½ each in Dunderland debenture stock and the debenture stock of the South Durham Steel Co. Against this a recovery of 2 is noticeable in William Beardmore's debentures, and the other changes are, if not often favourable, at least seldom adverse to a noticeable extent. Amongst Shipping, Cunard fully paid shares have risen a little as well as Moor Line shares. The market for Tea shares is steady on the whole, with, however, occasional losses, and Rubber shares have kept their prices better than might have been expected. Telegraph securities are also firm, and amongst Tramway companies the only weak spot of consequence continues to be in British Electric Traction issues. That company's preference shares, however, have risen ¼ on the week. Isle of Thanet debenture stock is down 6 and London General Omnibus debentures 3½, but San Paulo Tramway debentures are marked up 4. On the other hand, Sunderland District Tramways debentures and Yorkshire Tramways first debenture stock are down respectively 7 and 3.

FRIDAY EVENING'S MARKETS.

The De Beers' circular printed elsewhere rather hardened the market for the shares than otherwise, and there seems to be an immense "bear" account to close. A good effect was produced by the statement of Lord Allerton at the Great Northern meeting with regard to the prospective saving of £100,000 per annum in working expenses. Sir Alexander Henderson also spoke up well for his company, the Great Central, and the Home Railway market reflected the optimism, though York "A" alone held.

Canadian and Yankee rails were firm, Argentine dull and most other things neglected.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS.—Rise: Bank of England 3, to 268-273. **Fall:** Irish Ld. Stk. Acct. ¼, to 83¾-83⅞, Local Lns. Acct. ⅛, to 94-94⅛. India 1931 Acct. ½, to 100-100½, do. 1948 ¼, to 86-86½, do. Acct. ¼, to 86¼-86⅜, do 1926 and Acct. both ½, to 72½-73½.

CORPORATION AND COUNTY STOCKS.—Rise: L.C.C. 2½ p.c. 1, to 73-75, Portsmouth 3½ p.c.'s both 1, to 96-98, Leicester 2½ p.c. 1, to 67-69xd.

Critical Index to New Investments.

County of Durham Electrical Power Distribution Co., Limited.

This company was formed in 1899 to supply electricity for lighting and power purposes in the County of Durham, and has a capital of £500,000 divided equally into preference and ordinary shares of £5 each. On June 30 last it had spent £350,077 on capital account, and had also acquired all but two of the shares of the County of Durham Electric Power Supply Company, which was created for the supply of energy in bulk in an area of about 250 square miles. The Power Company's expenditure at the same date was £143,188, making a total of £493,265, which was represented by 161 miles of transmission and distributing cables, 30 distributing, transforming and converting stations with their full equipments, land, plant in consumers' premises, and costs of the various Acts and Provisional Orders. Funds are now needed to pay off existing liabilities of about £90,500 as well as for extensions to meet the rapidly growing demands for industrial power throughout the two companies' areas, and an issue of £250,000 5 per cent. first mortgage debenture stock was offered for subscription at par. Profits of the Distribution Company for 1906, including £5,068 from dividends on the Power Company's shares, were £19,684, and it is estimated will amount to £25,000 for the current year and £38,000 for 1908, so that the interest should be well enough covered from this source alone. In addition, however, the interest is unconditionally guaranteed by the Newcastle-upon-Tyne Electric Supply Company, which bought the debenture stock at 95 and offered it for subscription. Both the Power and Distribution undertakings are under contract to take their energy in bulk from the Newcastle Company, which is a big affair, with a share capital of £875,000 and a debenture debt of £437,500, and has paid a dividend of 8 per cent. per annum on its ordinary shares for the past nine years, and the margin behind this issue is therefore decidedly ample.

Rangoon Electric Tramway and Supply Co., Limited.

Established in December, 1905, to equip and work the tramways in Rangoon by electric traction and to supply energy for lighting and power purposes within the limits of the Municipality, this company has made very good progress since its formation. It has built a central generating station, and equipped it with a plant having a capacity of 1,900 kilowatts as well as various sub-stations, and has also constructed upwards of 22$\frac{1}{2}$ miles, and is on the point of completing another 2$\frac{1}{2}$ miles of tramways. The first service of cars was opened on December 16, 1906, on 6$\frac{3}{4}$ miles of track, and since August 6, 1907, full services have been maintained on upwards of 20 miles with results which the directors say have established the satisfactory profit-earning power of the system. As the immediate demand for energy for both lighting and power purposes has already largely exceeded the estimates the directors have decided to strengthen the central station by the addition of plant to bring the total capacity up to 3,400 kilowatts. The estimated cost of this and of the additions to the distribution system is £100,000, of which half was provided by the issue in Rangoon of 25,000 £1 ordinary shares at £2 per share, and the balance is to be met out of the issue of 10,000 6 per cent. cumulative preference shares of £5 each which were offered for subscription in this country. These shares were underwritten for a commission of 2$\frac{1}{2}$ per cent. and $\frac{1}{2}$ per cent., which seems reasonable enough in existing conditions, and should be a fair investment.

Scottish Western Investment Co., Limited.

This is a Glasgow concern which has been formed with the intention of investing in securities yielding a higher rate than can be ordinarily obtained in this country by individual investors. The capital is £500,000 in £10 shares, of which 25,000 were applied for before the issue of the prospectus, and it is proposed that these shares, when fully paid, shall be converted into 4$\frac{1}{2}$ per cent. cumulative preference and ordinary stock in the proportion of three-fifths of the former and two-fifths of the latter. While we agree in the main with the promoters in believing that the existing low level of prices presents an opportunity of making purchases on favourable terms, we hope they will not be in too great a hurry to carry out their plan of investing largely in the bonds, debentures and preference stocks of companies and of corporations in North America. The time has not come, nor is it likely to come for some considerable time yet, for venturing into that market, and not even the provision restricting the investment in any one security will give the company much of a run for its money if the directors do not walk warily.

Company Reports and Balance Sheets.

*** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

National Bank of Scotland.

The year of this Scotch bank ends on November 1, and the nett profits shown came to almost £221,200 or £1,910 more than in the preceding year, in addition to which £29,842 or £9,910 less was brought forward. The entire free balance was, therefore, £8,000 down at £251,842, but the directors are easily able to pay the usual 15 per cent. dividend, together with an extra dividend or bonus of 5 per cent. This will take £200,000. Property account and officers' pension fund each receive £5,000 as before, leaving £41,842 to carry forward or £12,000 more than was brought in. A year ago, however, £20,000 from profits was written off the investment account, and this year the grave depreciation is dealt with by the withdrawal of £130,000 from the general reserve fund. That amount is devoted to writing down further the value of the bank's investments, and its deduction brings the reserve down to £900,000 exclusive of the £200,000 set aside for the dividend and bonus and the amount carried forward. In addition to the writings off, some of the investments must have been sold, because the British Government securities held now amount to £995,000, a reduction of £113,280 on last year's total. At the same time the Bank of England, Metropolitan Board of Works and other stocks and investments, including £3,023 of the National Bank's own stock held at par, have been reduced by £134,379 to £1,960,160, so that the entire reduction in the value of the investments is nearly £248,000. Other changes in the balance-sheet seem to be for the most part in the right direction. The note circulation has gone up by £55,181 to £920,186 against which there is an increase of nearly £45,000 in that agglomerate described as "gold and silver coin, notes of other banks, and cash with the Bank of England and other London bankers," the total of which at the date of the balance-sheet was £1,414,452. Deposit and current account balances with other credits show an increase of £188,684 at £15,041,882. Drafts outstanding have fallen off by £48,358 to £72,020, but there is an increase of £76,810 in the bank's acceptances, which now amount to £726,715. Among the assets, bills discounted are up £284,711 at £2,195,847, while loans on railway stocks, &c., for short periods are up £6,061 to £2,861,365, and advances show an increase of £387,616 at £5,495,095. In spite of the yearly £5,000 written off against the real estate belonging to the bank, its total still goes up, and is this year £52,700 larger than it was last year. The increase has taken place entirely in what is called "heritable property yielding rent," which has gone up from £285,800 to £339,100, an increase of £53,300, whereas the increase on the total is only as above, a slight decline having occurred in the bank buildings at head office, London office and branches, the total of which is now £265,400. Has the bank been obliged to take over properties upon which

it had made advances? The total of the balance-sheet is £18,902,845. Gross receipts improved by £3,423 to £379,099 and current charges rose by only £1,513 to £157,099, hence the improvement in the nett revenue.

ASSAM-BENGAL RAILWAY CO., LIMITED.

In common with most Indian railways, this line did a largely increased business during the six months ended June 30, and its gross revenue rose by Rs. 4,95,470 to Rs. 23,46,164. Of this Rs. 10,39,904 or Rs. 1,67,713 more came from coaching traffic, owing to an increase of 207,811 in the number of passengers carried, while goods traffic yielded Rs. 3,08,032 additional at Rs. 11,65,405, due mainly to a heavy importation of foreign-grown rice. Working expenses, on the other hand, were Rs. 3,76,560 heavier at Rs. 21,15,398, but the proportion to gross earnings was a trifle better at 90.16 per cent. against 93.05 per cent. The nett earnings amounted to Rs. 2,30,766 compared with Rs. 1,11,856, which is retained by the Secretary of State in reduction of the charges for interest incurred by him. The directors propose to pay a dividend for the current half-year ending on December 31 at the rate of 3 per cent. per annum out of the guaranteed interest receivable from the Secretary of State.

BARSI LIGHT RAILWAY CO., LIMITED.

The Tadwala extension of this company's line, which was opened on May 1, 1906, rather more than doubled the system, while the receipts from the Pandharpur extension of 31 miles for six months are also included in the gross earnings for the year ended June 30. Traffic receipts for the second six months were considerably larger than in the first half-year, and the total for the complete year came to Rs. 2,50,413 more than in 1905-6 at Rs. 4,23,329. Most of the improvement was in passenger traffic, which showed increases of 309,352 in numbers and Rs. 1,49,561 in revenue, while goods traffic rose by 31,224 tons and Rs. 95,044. Working expenses amounted to Rs. 2,10,704 or Rs. 1,32,312 more, and although the ratio to gross income was substantially reduced during the latter half of the year, it was still heavy for the year at 49.77 per cent. compared with 40.96 per cent. The earnings of the Pandharpur line, and the interest on the debenture stock for the six months to December 31 were seemingly placed to the capital account before these figures were arrived at, and the nett revenue after providing for the debenture interest for the remainder of the year came to £11,038. With £3,185 brought forward, the disposable balance was £14,223 against £8,727, but more capital now ranks for dividend, and while the dividend on the shares is maintained at 6 per cent. the bonus of 2 per cent. paid a year ago is not repeated. The sum carried out, however, is increased by £1,438 to £4,623. In consequence of the representations of the chief engineer and agent that the rolling stock was inadequate to cope with the large number of pilgrims travelling to and from Pandharpur during the several fairs, as well as the increase in the regular daily train service, the board obtained the sanction of the Secretary of State to purchase, and to charge to capital account the additional rolling stocks and plant required. To meet this expenditure a further issue of shares not exceeding £40,000 has been sanctioned, and will be issued shortly. Arrangements have been made with H.H. the Nizam's Government for the construction of an extension from the present terminus of the line at Tadwala to Latur, and the directors seek powers to raise the necessary funds by the creation of debentures up to £150,000 to rank as a first charge on the company's lines within the territories of H.H. the Nizam, and as a second charge on the existing lines.

BRITISH AND ARGENTINE CORPORATION, LIMITED.

Most of the work done by this corporation during the period from June 14, 1906, to June 30 last was in the nature of an investigation of schemes offered to it, and even in this it has been hampered by the financial depression which has existed since its formation. A small revenue of £2,800 was received from interest, fees and commissions, &c., but the expenditure was naturally heavy and the profit and loss account showed a debit balance of £3,815. The directors, however, state that they have several propositions approaching fruition, which they expect will yield sufficient profit to wipe out this debit and leave a margin which will put the corporation in a very strong financial position. Amongst other things, an option has been secured on an estate in the Province of Jujuy, Argentina, containing large forests of quebracho, and a company is now being formed to take this over on advantageous terms. In addition a substantial interest has been taken in an Argentine syndicate formed to acquire vast forests of quebracho and other timber in another part of South America. The corporation also assisted in the formation of a Buenos Ayres company, which took over a land and timber estate in Brazil, receiving for its services a substantial bonus in shares, and as the property is now to be sold to an English company further profits in cash and shares are counted upon. An option obtained on a group of tin mines near the city of Potosi, Bolivia, is to be handed over to a company now being formed, and another option on certain rich silver and bismuth mines in the same country will be disposed of as soon as circumstances permit. One way and another, therefore, the corporation has a good many irons in the fire, most of which should realise the directors' expectations.

AUSTRALASIAN MORTGAGE AND AGENCY COMPANY.

Quite a pleasant display in one sense is made by the board of this unfortunate and in other years disastrously managed concern in its report for the year ended May 20 last. That is a long date back, but perhaps it was difficult to get the Australian accounts home. All this time the realisation of properties has continued, and the company is now in a position to clear off most of its debt. When it was reorganised in May, 1903, it owed £902,335 on debentures, private mortgages and bank overdrafts. At May 20 last this debt had been reduced to £201,362, and there is money in hand to make further payments. On the first of next month £100,000 is due to debenture holders and to the bank. In order to pay this money the directors have arranged to borrow £85,000 from one of the Australian banks and they have funds in hand to make up the balance. This will leave £10,000 of poor mortgages outstanding which the directors do not intend to pay off. Profit and interest from stations worked by the company came last year to £5,140 and its total revenue was £38,494, out of which all working charges were met, and £10,874 disbursed for interest on debentures, mortgages, and bank overdraft, leaving £22,822 to be carried to the balance-sheet. This was enough to wipe out the debit balance of £6,230 brought forward from the previous year, leaving still £16,022 of clear profit. No dividend appears to be contemplated, but the shareholders are doubtless expected to come in to the full enjoyment of the properties when all the debt is paid off. Last year £18,084 was spent on property realised, but the book value of those still remaining is £91,000, the company having had to take over £113,042 worth of properties formerly owned by other people, but over which it held charges. It has been a cruel business for the shareholders, and we do not yet see where they are to get their [illegible]

NORTHERN AMERICAN TRUST CO., LIMITED.

This is one of the strong Dundee companies, whose investments are mostly in the United States, and it closes the whole well last year ended November 1, and the directors are able to give the ordinary stockholders a dividend of 5 per cent., with £13,213 left over. This takes no account of the £10,734 received as premium on new shares issued during the year, the whole of this, together with £2,224 drawn from the revenue, or £70,000 in all, being added to the reserve fund, raising it to £350,000. A balance of £9,563 was brought forward, and after these payments and transfers are made £11,008 will be put out of the past year's revenue, so that the two balances carried to £20,571 to be carried to the next year. No details of the investments are given, but the directors say that the company holds 184 different securities, and that the amount in United States bonds, preference and guaranteed shares and common shares owned by it was £1,971,440 at the date of the balance-sheet, while the investments of a similar class in securities outside the United States, including Great Britain, amounted to £470,381, making a total investment list of £2,137,780. Most of this money, however, is in debenture bonds or [illegible] in United States bonds £1,437,418 and in preference and guaranteed shares of the same country £188,580, only £25,858 being in American common shares. A like proportion is shown in the investments outside the United States, no less than £311,021 of the total being in bonds and debenture stocks and only £2,500 in ordinary shares, while the preference and guaranteed shares invested in total up to no more than £58,058. It is curious, perhaps, that the depreciation has been small in spite of the financial crisis in New York. It amounted on the usual valuation made at the date of the balance-sheet to only £118,600, or about 5½ per cent. on the book value of the investments, this being under one-third of the amount of the reserve fund and balance carried forward, so that even at the present depressed valuation there is a surplus of £251,805 over the combined share and debenture capital, which amounts to £1,717,797. Unhappily we are not at the end of the depression yet.

E. RICH AND CO.

This Dalgety subsidiary did rather better in its year ended September 30 last, but not very much. The net profit, including the balance brought forward, was £13,775 or £1,284 more than in the previous year, and the directors are accordingly able to pay a final dividend at the rate of 10 per cent. per annum, making with the interim 4 per cent. paid 5 per cent. for the year. The balance left allows them to set aside £1,000 to dividend equalisation account and still to carry forward £1,882 against £1,508 brought in. Why do directors and debenture fees go up year by year? Including commission, they figure in this year's accounts for £3,504, which is £280 more than last year's charge and fully £1,250 more than was paid two years ago. The whole of this increase cannot be due to increased taxation. Trading profit, it may be added, is £11,888 as against £12,770, including £130 4 dividends on shares held in other companies, entered in the balance-sheet at £2,220. In the balance-sheet sundry creditors at £42,705 show a decrease of £35,872 against which there is a decrease of £9,000 in the stock, which is now entered at £12,000. Freehold and leasehold properties, plant, and furniture have been increased by £6,213 to £15,309, and there is an increase of £11,475 in sundry debtors at £84,504. Bills receivable also show a slight decrease of £618 at £50,680 and cash is £820 less at £8,033. Nothing in these changes, however, indicates a break in the selling side. On the contrary, they seem to show that the business has benefited to a considerable extent by the increased prosperity of Australian trade, and if it continues to do so much of the profit each year to the formation of a reserve, no matter by what name, it will doubtless gradually attain a position of stability.

PILLSBURY-WASHBURN FLOUR MILLS CO., LIMITED.

According to the directors of this company the year ended August 31 was one of the most difficult ever experienced in the North-West American milling industry. The [illegible] was a moderate one and with small stocks held in elevators the

price of spot wheat was always at a premium over that for future delivery, and the position was aggravated in the spring by the speculation induced by reports of damage to the growing crops. Prices were forced up 30 to 40 per cent. and were kept up considerably above the relative price of flour, so that profitable milling was impossible for several months. Under these circumstances a decline of £4,017 to £124,429 in trading profits was not perhaps out of the way, but we cannot commend the directors for the step they have taken to minimise the decrease in nett profits. No depreciation is ever provided on the company's property but the management professes to maintain the whole of it in an efficient condition out of revenue, and it might reasonably be expected that the outlay each year would be on an ascending scale. Instead of that £3,937 less at £27,194 was spent on repairs and renewals, and with a trifling reduction in local committee's fees the nett surplus is brought out at £95,634 or within £60 of that for the preceding twelve months. With £235 from interest the available total was £95,869 against £95,941 and after providing for debenture interest the balance would be sufficient to meet the preference dividend and leave £2,301 to be carried forward against £2,576 put to reserve a year ago. As things are in America, however, the directors require all the funds they can get to carry on the business, and they therefore propose to postpone the distribution of this dividend until the situation becomes clearer. Property account has been increased by £39,660 to £1,700,340, presumably in connection with the new power house on Hennepin Island, which it is expected will be completed early in the new year, and against this heavy item the reserve of £10,784 seems pitifully small. A very heavy addition of £250,720 to bills payable, making the total £915,870, is only partly offset by a drop of £95,545 to £151,665 in sundry creditors, but, on the other hand, stocks are £49,134 larger at £872,767, and debtors owe £48,466 more at £243,130, while cash amounts to £109,614 and bills receivable are down by £3,728 to £9,525.

Camwal, Limited.

It was an unlucky day for this company when the directors lost their heads, and by expanding the capital spoilt what was a very decent little undertaking. A year ago the gentlemen in control implored shareholders not to get nervous over the fall in the price of the shares, which they ascribed to those wicked "bears," although sufficient justification for a heavy shrinkage in value was provided by their own report. If last year's results were discouraging, those for the twelve months ended September 30 can only be described as disastrous, and the only comfort the directors can find is that all purveyors of beverages suffered more or less from the miserable summer. Yet few of them, we imagine, have shown anything like such a miserable display. Gross profits, after providing an undisclosed amount for depreciation, were £1,873 lower at £16,117, and as expenses took a little more at £13,570, the nett profits, including £1,042 brought forward, were only £3,589 compared with £5,576. Out of this the preference dividend is met, but the balance of £1,117 remaining is insufficient to provide even the 2½ per cent. paid on the ordinary shares a year ago, and is therefore carried forward. Under the circumstances we think shareholders should be given considerably more information about the position of the company than the directors vouchsafe in their report, and one of the first things that should be disclosed is the amount allowed for depreciation. Freehold and leasehold land, buildings, proprietary rights, trade marks and goodwill form one item in the balance-sheet which shows a small increase at £97,375, while plant appears to have been written down by a trifle of £495 to £11,623, and horses, vans and furniture together are £217 lower at £1,726. Stocks of syphons, bottles, cases, soda fountains, &c., at selling price have been increased by £1,803 to £35,289, against which the reserve is £77 up at £31,248, while syphons, cases, giant syphons, and other advertising effects out on loan are £6,443 down at £40,332, but both of these items seem totally out of proportion to the business done. Sundry creditors fortunately are small at £2,302, and on the other hand debtors are down £3,091 to £14,695, all of which we hope is good. Cash has dropped slightly to £6,365, but investments in securities not specified remain at their book value of £2,204.

Mordey, Carney and Co., Limited.

This is the company in which Thornycroft's possess a large interest, and in the year to September 30 there was a gross revenue of £23,022 and a nett profit of £9,551. Interest on debentures and loans is £3,467, a sum of £403 is provided for depreciation on investments and £300 for bad and doubtful debts, leaving £5,381 nett. With £557 brought forward, the disposable balance is £5,939, and the directors propose a dividend of 2½ per cent., carrying the greatly increased sum of £3,302 into the current year. Capital outlay remains at the same figure as a year ago, and in addition to a depreciation and sinking fund of £21,000, an amount of £9,400 has been paid as premiums on redemption policies. On the latter, however, the company has raised loans to the amount of £6,690. Investments are entered at £2,500, apparently their market worth, sundry debtors are a long way in advance of creditors, bills receivable are £9,134 and cash £2,827. Work in progress is valued at £2,875, not a large sum, stocks are £7,594, and loose plant, &c., is in at £11,005.

Midland Iron Co., Limited.

A small company this which calls for little notice here beyond the statement of its profits and dividends. Profits for the year closed September 30 last were £9,270, or with the balance of £711 brought forward, £9,981. Dividends are paid on the preference shares and the ordinary get 10 per cent. for the year, while £3,754 is written off for depreciation and £1,000 put to reserve for doubtful debts, leaving £1,477 to be carried forward. This seems to indicate conservative management, and the directors say that the works are in a sound condition, the ordinary repairs having been charged to revenue. No unpleasantly large items appear in the balance-sheet unless it be stock-in-trade £25,495 and sundry debtors £23,380, but the company, although it has very little money to come in, does not seem to owe an inconvenient amount on current business, sundry creditors being down for £21,346. There is no free reserve, however, and new capital expenditure during the year just balanced the sum written off for depreciation.

Bentley's Yorkshire Breweries, Limited.

Business recovered a little with this company during the twelve months ended September 30, and trading profits improved by £2,794 to £96,708 compared with a decrease of £2,811 a year ago. Rents, however, yielded rather less at £25,999 and the total income was only £2,499 up at £122,707, but, on the other hand, savings were effected in general expenses, outlay on repairs, &c., and with £6,013 or £1,489 more brought in, the nett balance came to £58,371 compared with £54,046. Debenture and loan interest and preference dividend having been met, the directors take advantage of the larger revenue to increase the distribution on the ordinary shares from 3 per cent. to 4 and add £2,260 to the sum carried out raising it to £8,273, but for the second year in succession nothing is put to reserve which remains at £33,000. Freehold and leasehold properties have been reduced by £9,792 to £994,387, presumably in connection with licences lost and further reductions are foreshadowed from this cause as seven licences were refused during the year the compensation for which will be handed over to the debenture trustees when received. A small decrease of £1,412 is also shown in casks, rolling stocks, &c., and these reductions are accompanied by a drop of £10,293 to £42,350 in loans and deposits. Creditors are £5,231 down at £26,336, and, on the other hand, stocks are £2,712 lower at £59,276, but debtors, loans, mortgages, and other investments have risen by £7,668 to £10,562. Apart from £21,064 or £5,717 more in the hands of the debenture trustees the cash balance amounts to a trifle of £858 only.

Strettons Derby Brewery, Limited.

A further improvement of £2,271 to £56,849 was secured in the revenue for the year ended September 30, and with receipts from dividends and transfer fees identical with those of a year ago at £9,239 the nett income, after providing £9,430 for repairs and depreciation, was £2,207 higher at £56,658. Of this charges, including £1,710 for compensation fund, took £6,996 or £296 more, but debenture loan and mortgage interest was £615 down at £13,915 leaving a total of £35,747, which was increased by the balance brought in to £44,907 compared with £41,760. The dividend on the ordinary shares, however, is again at the rate of 10 per cent., as in addition to placing another £10,000 to reserve the directors write £2,030 off balance of leaseholds and £1,000 off property improvement account and carry forward a few pounds more at £9,277. On balance the capital account shows an increase of no more than £127 at £555,723, while plant is valued at £14,212 and casks, horses, &c., come to £8,042. Investments in shares of the Midland Brewery and Allen and Co., Limited, are unchanged at £81,890 and £62,134 respectively and against all these the reserve will now amount to £100,000. Liabilities for mortgages and loans have been reduced by £8,021 to £24,549 and sundry creditors are £1,309 down at £18,546, and, on the other hand, debtors, including loans, show a decrease of £4,985 to £26,031, but stocks are a trifle higher at £12,095 and cash is up to £11,110.

J. W. Cameron and Co., Limited.

With £15,644 from rents and interest the gross income of this West Hartlepool brewery for the year ended September 30 was £2,790 down at £101,479. Of this repairs and depreciation took £12,152, leasehold redemption £1,085, compensation fund £3,380, and after writing off £3,581 for bad and doubtful debts and £5,250 for estimated loss in respect of licences, the nett balance showed a decrease of £4,183 at £76,031. Debenture and other interest having been met, a surplus of £51,329 was left compared with £54,988, out of which the directors repeat last year's dividend of 12 per cent., but put £2,500 less at £10,000 to reserve, and can only carry forward £679 against £1,050 brought in by ignoring the licences insurance fund altogether. New properties purchased and improvements made cost no more than £6,565, and against this £6,735 was written off, leaving the item only slightly higher at £1,158,455, while the reserve now comes to £275,000. Sundry creditors are much about the same as a year ago at £11,642, but loans and deposits show the very substantial reduction of £23,185 at £14,217. Debtors are down by £19,834 to £33,820, and stocks are £5,072 lower at £68,879, but cash has increased by £9,038 to £14,968, and the position is certainly better than it was.

Massey's Burnley Brewery, Limited.

In their report for the year ended October 31 the directors of this company have discontinued the practice of setting out the gross profits and expenses, and now give merely the balance after providing for working expenses and deducting £1,500 for depreciation and £1,457 for compensation charges. This balance showed an increase over the previous year of £1,998 at £24,338, but £2,000 was taken from equalisation of dividends fund a year ago, and the available surplus including £434 brought forward and £5 from transfer fees was therefore practically identical at £14,585. No attempt is made to replace

the money taken from the dividend fund, so the directors are again able to distribute 8 per cent. on the ordinary shares and to add £151 to the sum carried out making it £585. Property account was reduced by £5,519 for compensation received in respect of six licences extinguished and property sold, and as nothing was added this item now stands at £348,715 while goodwill is down to £7,500 as the result of the provision for depreciation. Sundry creditors have risen by £3,241 to £12,639 against which debtors owe £8,361, but stocks are higher at £22,191 and cash has been just about doubled at £15,083, while the investment in Consols is now £7 606 compared with £2,606.

USHER'S WILTSHIRE BREWERY, LIMITED.

Gross profits for the year ended September 30 dropped by £1,736 to £24,892, but against this less was provided for bad debts and leases written off, and although the allowance for repairs and depreciation was increased by a new item of £750 for depreciation of plant the balance available was £1,776 down at £12,337. Adding £3,278, or £1,023 more brought forward, the disposable total was £10,528 compared with £11,281, out of which debenture interest is met and £2,000 is added to reserve against £2,000 written off debenture issue expenses last time, after which the dividend of 10 per cent. on the ordinary shares is repeated leaving £4,526 to be carried to the new account. An increase of £3,320 to £154,252 has taken place in the outlay on property, plant, &c., and against this the reserve only amounts to £20,000, all of which is employed in the business. Sundry creditors are £3,766 up at £14,582, but the amount due on mortgages and loans has been reduced by £1,619 to £16,097. On the other hand, debtors owe £23,514 and stocks have risen by £3,052 to £22,555, but cash comes to £1,855 less at £3,549.

ST. PAULI BREWERIES, LIMITED.

The home trade in Germany and in Great Britain for the year ended September 30 was adversely affected by the unfavourable weather, but any shortage in these directions was more than made good in the export business, and sales were 3,266 hectolitres larger at 80,778 hectolitres. Trading profits rose by £1,005 to £21,606, and with £346 or £270 more brought in the nett profits showed an improvement of £1,290 at £17,184. Of this, £700 more at £1,200 is put to reserve, but the depreciation allowance is reduced by £565 to £5,182 and the surplus remaining is still large enough to let the directors pay an extra 1 per cent. at 4 per cent. and to raise the sum carried out to £502. During the year £14,535 was spent on capital account and the nett increase was £8,894, necessitating a further resort to credit operations. Mortgage bonds to the extent of £2,585 were paid off, reducing the outstanding total to £77,561, but loans on mortgage and from bankers were £9,559 up at £32,583. Sundry creditors and bills payable also rose by £2,311 to £17,706, but against these debtors and loans against security showed an increase of £1,036 at £51,365 and cash was £2,656 higher at £5,964, while stocks were practically unaltered at £39,387. The reserve fund now amounts to £13,200 or little more than 5¼ per cent., a proportion which seems woefully small for a company that has been in existence 20 years.

DARRACQ-SERPOLLET OMNIBUS CO., LIMITED.

The start made by this company, regarding which so much was said at the Darracq meeting, is not very encouraging, but there is a good deal to be said in excuse for the poor display made in the first report. For one thing, its arrangements were very much interfered with through the death of M. Leon Serpollet, the inventor of the system of super-heated steam which bears his name, and for another business was conducted at great disadvantage and expense through lack of the new factory. The old works were totally inefficient for either extensive or economical working, and profits for the period from May 17, 1906, to September 30 last consequently amounted to no more than £7,702. Interest and transfer fees gave another £1,406, making a total of £9,108, but general charges, including managing directors' fees, travelling expenses, &c., took £8,030, and the outlay on advertising, shows, trials, &c., came to £8,372, leaving a loss on balance of £7,294. Better things, however, are expected now that the new factory has been completely finished and equipped with the latest labour-saving machinery and appliances, but the company would appear to have been pretty heavily handicapped by the high value put upon goodwill and patents. These stand at £200,675, or nearly 75 per cent. of the capital, an unduly large proportion to be represented by what is at best an intangible asset, and is especially so in this case, where it really has to be created by the company itself. Buildings, fixtures, &c., stand at £40,099, machinery and plant at £48,900, and materials and stock-in-trade at £64,755, so that the company is living very much on credit, and we find that in addition to £62,158 due to sundry creditors and on bills payable a loan of £8,568 has had to be obtained from the bankers. This will probably have to be considerably increased in the near future, as there is only £17,060 to come in from sundry debtors and bills receivable, and £1,884 in cash.

WEST-END CLOTHIERS CO., LIMITED.

This unfortunate concern has been badly hampered throughout its brief career by the greed of the promoters who took no less than £241,500 in cash out of a total share capital of £260,000. Of this £163,529 was represented by goodwill, and with such a handicap as this represents, the company has had a hard struggle to make ends meet. It has not been over successful in that, and in 1906 could only pay 1½ per cent. on account of the half-year's preference dividend to January 31 of that year. Trade was better during the twelve months ended July 31, and nett profits, after providing for debenture interest and other charges, amounted to £4,979, to which was added £442 brought in, making a total of £5,421. The sum the directors would very much like to apply in reducing the arrears of preference dividend, but they are advised by the auditors that they would not be justified in doing so, as there are various items in the balance-sheet which must be written down. The directors, having seriously considered the matter, came to the conclusion that the best means of meeting the position was to write off at once all the items unrepresented by available assets. They consulted some of the larger shareholders, and obtained the consent of the holders of over 112,000 ordinary shares and over 60,000 preference shares to the capital being reduced from £260,000 to £158,000 by writing 3s. 6d. off the preference and 10s. off the ordinary shares. This will make a total reduction, excluding the £30,000 of unissued capital of £87,000, which the directors consider will be sufficient to put the company on a healthy footing. We doubt, however, if the scheme goes deep enough, as in addition to the goodwill there are still preliminary expenses of £9,603 and costs of establishing new branches amounting to £668 to be wiped out. Leasehold properties £45,383, fixtures and fittings £32,874, and debentures and shares at cost £25,000, will probably also require scaling down pretty liberally. Creditors are fairly heavy at £20,536 and exceed debtors by £4,454, but stocks are valued at £28,057, including £8 2s. 3d. per cent. on cost of stock at branches for warehousing expenses, &c., and cash comes to £9,030. One other item that we do not like to see is the £3,738 due by the late governing director, and the shareholders should inquire what is the present value of the securities held as cover for this debt. As some compensation for the reduction in the nominal value of their shares, the preference dividend is to be increased from 5½ per cent. to 6.

ARNISTON COAL CO., LIMITED.

The directors do not trouble to enter into any details in their report for the year ended September 30, and we can only judge from the figures given that business is satisfactory. Profits from the colliery and brickworks, including £711 brought in, were £15,147, and after providing for management expenses and debenture and other interest, the nett balance was £13,336. Before this total was arrived at £6,000 was written off for depreciation, and another £5,000 is now added to reserve, after which the preference dividend is paid, and the ordinary shares receive 16s. per share for the year or 10 per cent. on the amount paid up, leaving £1,825 to be carried forward. During the year £4,755 was spent on capital account, but with the allowance now made and sundry small adjustments the property stands in the balance-sheet at £87,393 or £1,305 less than a year ago. Issued capital, less £2,000 outstanding on preference shares allotted, is £75,000, and £15,000 has been raised on debentures, while the reserve now amounts to £14,706. Current liabilities of £10,901 exceed the sum due from debtors by over £1,000, but stocks of coal and brickwork in hand are valued at £5,728, and there is £10,901 in cash.

COOPER, COOPER, AND JOHNSON, LIMITED.

A slightly smaller quantity of tea was produced for the year ending June 30, but the price obtained was nearly 1d. higher at 7.59d. against 6.65d. per lb., producing £68,593. The cocoa yield was 840 cwts. more and the price 17s. 8d. higher at 80s. 10d., and 6,802 cwts. were sold for £26,450. Rubber, with which the equivalent of 1,000 acres is now planted, also rose in weight by 3,705 lbs. to 11,185 lbs., but the average price obtained was 7d. lower at 4s. 5½d. per lb., and produced £2,037, including sales of seeds, &c. Deducting costs of cultivation, £93,830 from gross proceeds £101,182, a trading profit of £37,352 is shown. From this debenture and loan interest take £13,776, provision for reinstatement of buildings £2,500, depreciation reserves £2,500, reserve £2,000, and after providing for London expenses £15,034 is left for division under the terms of the reconstruction scheme. Property stands as before at £434,095, debtors £2,204, coast advances £7,684, produce is valued at £25,878, and cash amounts to £4,825. Further and final payments of £262 on liquidation account have been added to deficiency account, raising it to £162,733, and the directors consider that it should now be written off by cancellation of capital, and ask the shareholders' consent. Liabilities comprise sundry loans secured on mortgage debentures £42,973, redemption of loans £3,247, and reserve accounts with this year's addition £7,147. The preference share dividends have been in arrear since December, 1899.

TRADE AND PRODUCE.

WHEAT.—Markets have been well attended this week, and business has been a good deal better for nearly all wheats. The new River Plate crop has been in demand, particularly the southern varieties, for early shipment, and offers are about 6d. per quarter higher. American quotations for winter wheat are also up about 2d. per cental over last week's prices. Spot parcels of Manitoba's were about 1½d. in advance, Northern being quoted at from 44s. 6d. to 45s. on Mark Lane market, and English wheat also went from 3d. to 6d. in favour of sellers. Farmers' deliveries for the week were only 56,400 quarters at 34s. 8d., compared with 70,332 quarters at 26s. 1d. in the same week of last year, and it is noticeable that the rates of the current year have been much below those of last year. Foreign supplies, on the other hand, keep well up, this week's imports from abroad amounting to 360,943 quarters against 292,180 last year, and for

the season to date, 6,394,524 quarters against 6,108,432 last season. The estimated quantities of wheat and flour to the United Kingdom are higher also this week than last, being 2,060,000 quarters against 1,920,000 quarters. To the Continent, on the other hand, they are 100,000 quarters less at 1,180,000 quarters.

Wool.—A dull trade has ruled all the week, and Bradford market has been particularly slack. Many holders have been forced to sell owing to the financial pressure, and this has brought about some very low prices, in crossbreds particularly, which are comparatively weaker than merinos. English woolstaplers are refusing to follow the downward turn of prices, and therefore business with them is more or less at a standstill. London buyers satisfied their requirements at the last series of colonial sales, and in Leicester the local wool trade is practically at an end for the year. Spinners have plenty of work on hand, but the uncertainty of prices is a check on any new contracts of large dimensions, and neither here nor in the manufacturing business are the prospects for the New Year very bright. So much depends on the continuance or not of that high Bank rate.

Cotton (from our Manchester correspondent).—We have experienced an unsatisfactory week in our staple industry so far as new business is concerned. Buyers have not been stimulated to operate freely either in yarn or cloth. Small lines to meet actual wants have been put through, but buyers, as a rule, are not in the mood to anticipate future requirements. Advices with regard to the American crop are a little better, and prices have shown a tendency to droop. What the yield will turn out to be is very uncertain. Messrs. Neill Brothers hold to their estimate of 11,600,000 bales, but Manchester is looking forward to a crop of quite 12,000,000 bales. News from Egypt with regard to the growth there is rather disappointing. No development has occurred in the ring spinners' wages dispute. In view of the near approach of the holidays it may be the middle of next month before any crisis is reached. In piece goods for export there have been rather more offers about for Calcutta, but in few cases have they been of a practicable character. Bombay has also shown a little more activity. The total sales for India, however, are not important. China business is difficult to arrange owing to the continued decline in the price of silver. Advices from the Near Eastern markets are discouraging. Nothing much is heard at the moment of the South American outlets. Home trade buyers have not done much in any make of cloth. Manufacturing all round at the present time is a poor business. Where bought yarns are used definite losses are taking place in several districts. To buy yarn to-day and produce cloth in many instances means a definite loss. As confirmation of the poor state of the weaving section, it may be mentioned that the failure of a small manufacturer is reported this week. American yarns for home use have been firmly held, but there has not been much doing in either twist or weft. The production of the spindles has scarcely been sold. Margins all round by spinners are fairly well preserved. Ring yarn, on the whole, is healthy, with a fair demand. Export bundles in 40's mule suitable for India are strong owing to lengthy engagements. More business could be done, but there are delivery obstacles which are not easily overcome. Continental demand is quieter, but shipments continue heavy. Bolton yarns are losing ground, and irregularity in quotations is increasing.

Sir Jacob Behrens and Sons report that the American cotton market has been rather feverish during the past week. Buyers have not been much in evidence, and any attempt on the part of the "bulls" to unload brings about a decline. Holders of actual cotton, on the other hand, do not seem disposed to part with their holdings unless at full rates, and speculation is therefore confined to dealing in "futures." The sales of "spot" cotton in Liverpool have again been on an extensive scale. Egyptian cotton continues dull, but quotations have advanced $\frac{1}{16}$d. per lb.

Coal.—The position of the trade has not altered this week. It is in most directions quieter, locomotive coals being in most active demand, and a good deal of argument taking place as to prices. Next year's business is not regarded with the confidence it was a while ago, and consumers consequently are not willing to give the 2s. 6d. to 3s. per ton more asked by the coal-owners for new contracts. The mild weather has had the effect of diminishing home coal business, but there is no weakening in price, and a prolonged spell of cold would probably send them up another 6d. or 1s. per ton. Welsh trade is still interfered with by the weather, but there is a fair amount of vitality beneath the slackness, and a strong resistance against lower prices. It is thought by "authorities," says the *Engineer*, that "after the usual quietness of the festive season there will be for a time a strong demand."

Copper.—The market dropped to £57 for cash metal at one time during the week under discouraging American reports, the general slackness of the consuming trade, and the unfavourable statistics given by Messrs. H. R. Merton and Co., Limited. They state that the visible supply on December 15 was 17,788 tons, against 15,789 a fortnight ago. Supplies for the fortnight amounted to 26,602 tons, and deliveries to 24,603. Stocks in England and France were 11,038 tons against 10,187 a fortnight ago. The Chili Charters were 1,000 tons. Prices rallied again later, restricted offerings and influential bidding for cash copper, together with covering operations before the holidays, all helping to send prices up a little, and last night they closed at £59 17s. 6d. for cash and £61 2s. 6d. for three months.

Tin.—Prices in this market also went down with a run, and for the first day or two were quite demoralised through heavy selling particularly of forward metal. Business in the East was reported as low as £116 15s. c.i.f., and prices here came below even that for cash metal. Wednesday saw a slight recovery, but prices fluctuated a good deal again on Thursday, and after rather an excited session closed at £119 cash and £121 three months. To-day a fresh rebound sent quotations up to £121 15s. and £123 10s., and the market at the end was steady.

Iron and Steel.—The close of the year sees depression in these industries more pronounced than ever. West Coast hematite, mixed numbers, are again down in price another 1s. to 67s. f.o.b., and East Coast rates are as low as 64s. 6d., or 12s. below those of November. Nothing is doing in any of the markets. Cleveland pig-iron makers are getting to the end of their contracts, but do not seem anxious to take in others at reduced quotations, as it is by no means profitable to do so, though the cost of production is considerably less now that coke is at a reasonable figure. Reports from abroad show that prices there have fallen even more rapidly than here, and many consumers who were large customers of Cleveland iron are now satisfying their requirements from the Continental markets. Altogether a quiet time is looked for next year, and ironmasters are putting many furnaces out of blast, and reducing production as much as possible. Steel business is suffering from the dulness in shipbuilding, and makers of finished goods are having to compete keenly with foreign manufacturers.

Tea.—No sales of Java were held this week, and those of Indian and Ceylon were the last for the year, further sales not taking place probably till January 6 and 7. This week the rather larger quantity put forward sufficed to check any further upward movement in prices Messrs. W. J. and H. Thompson report, although last week's prices were, on the whole, maintained. An interval of three weeks will help to strengthen the market, particularly "if the much desired reduction in the Bank rate has by that time come into force." Sellers will also no doubt profit by their experience of last January, and refrain from offering too large quantities. At the Indian auctions 36,854 packages were offered, of which 30,730 sold on garden account at an average of 8.54d. against 8.08d. a year ago, prices in general being firm for all teas up to 9d. Above that they were a little irregular and in favour of buyers. Ceylon quantities brought forward were particularly heavy, 29,484 packages, but there was a strong market for lower and medium grades, and the average for the week came to 8.58d. against 8.65d. in 1906.

Sugar.—Mr. Czarnikow's weekly circular gives the factory figures published last Sunday, and they show for Convention countries only 90,000 tons below those published a year ago, while the final results are supposed to be only 75,000 tons less than last season. Austrian figures especially, though disappointing as to roots, are extraordinarily high as regards quality. The market, says Mr. Czarnikow, turned decidedly quieter on publication of the figures, May moving from 10s. 1¾d. to 9s. 11¼d., then recovering to 10s. 1¼d. In view of the Cuban deficiency and the difficulty of contracting a larger supply of roots, it seems that a price of about 10s. for next spring delivery is not unreasonable. Though we have, with the Russian surplus, more sugar in Europe than last year, it would be difficult to fill American orders at such price, and until we find that they can be filled from Java, and that we are likely to have larger sowings, holders are not likely to feel much depressed, but there is no encouragement for the trade to push prices; the margin between raw and refined remains very discouraging, and involves refiners in a heavy loss, whilst the scarcity of money brings sufficient actual sugar to the market.

According to figures of production and statistical movements, we had in Europe on October 1 in stores and in the ground more sugar than last season, with 103,000 tons less going to America, and 60,000 tons less shipped elsewhere in October-November, against 35,000 tons more consumed. France exported little last year during December-March, and will, perhaps, do so again, but during the summer she may want to compete against Russians to come later on, even at the risk of lowering her stocks to a fair level, unless her sowings should be reduced. In Convention countries outside France (i.e., in Austria) there are now 150,000 tons more in stock than last year, with the same quantity still to be produced, but the comparisons of consumption and shipments elsewhere may be favourable in December-May, because last season they were moderate. The future evidently now turns on Cuba and the next beet sowings.

New York market remains firm at unchanged quotations, but there is no activity in it, although demand for new crop Cuban sugars at full parity of spot prices has set in, and indicates that refiners are not well supplied. Landings at the three ports for the week were only 16,000 tons, meltings 33,000, and stocks 137,000 tons.

Dr. Turnbull Smith, who has been manager of the Life Association of Scotland for nearly 23 years, having intimated to the directors his desire to retire from the management when he attains the age of 65 in August next, the directors have acquiesced in his wish. Mr. John Sharp, who has been upwards of 46 years in the service of the association, for the last 25 years as secretary, being desirous to retire along with Dr. Turnbull Smith, the directors have agreed to his request. Mr. Gordon Douglas, F.F.A., F.I.A., who has been in the service of the association during all his official life, and who has been its actuary for about 20 years, has been selected as manager and actuary, and will enter upon his extended duties when Dr. Turnbull Smith retires on August 5 next.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Carrizal and Cerro Blanco Railway.—3½ per cent. for half-year to June 30.

Egyptian Delta Light.—2 per cent. for half-year to Sept. 30 on the preference shares.

La Guaira and Caracas.—Interim of 1½ per cent., or 3s. per share, being at the rate of 3 per cent. per annum for 1907, payable Jan. 15.

New York Central and Hudson River.—1½ per cent., payable Jan. 15.

BANKS.

Austro-Hungarian.—7·64 per cent.

National of New Zealand.—Interim at the rate of 10 per cent. per annum for half-year ended Sept. 30.

MINES.

Angelo.—22½ per cent. for half-year ending Dec. 31.

Cason.—30 per cent. for half-year ending Dec. 31.

Driefontein Consolidated.—10 per cent. for half-year ending Dec. 31.

East Rand Proprietary.—17½ per cent. for half-year ending Dec. 31.

Esperanza.—Interim of 6d. per share and an additional interim of 4s. per share for quarter ending Dec. 31, payable Jan. 22.

Glencairn Main Reef.—For half-year ending Dec. 31.

Glencoe (Natal) Collieries.—Half-yearly of 6d. per share.

Great Fingall Consolidated.—Quarterly interim 2s. 6d. per share, and a bonus of 6d. per share, payable Jan. 10.

H. F.—27½ per cent. for half-year ending Dec. 31.

Knights Deep.—Interim of 10 per cent. (2s. per share) for six months ending Dec. 31, being at the rate of 20 per cent. per annum, payable Feb. 13.

Langlaagte Estate and Gold.—At the rate of 20 per cent. per annum for six months ending 31st inst.

Meyer and Charlton.—30 per cent. and a bonus of 20 per cent., making 100 per cent. for 1907.

Natal Navigation Collieries.—Interim of 2½ per cent., being at the rate of 5 per cent. per annum for half-year ending 31st inst.

New Comet Gold.—6½ per cent. for half-year ending Dec. 31.

New Kleinfontein.—10 per cent. for half-year ending 31st inst.

New Primrose.—20 per cent. for half year ending Dec. 31.

New Rietfontein.—15 per cent. for half-year ending Dec. 31.

North Broken Hill.—1s. per share, payable Jan. 23.

North Randfontein Gold.—At the rate of 10 per cent.

Oriental Consolidated.—6oc. per share, payable Dec. 17.

Porges Randfontein.—At the rate of 10 per cent.

Premier (Transvaal) Diamond.—10s. per deferred share, being at the rate of 400 per cent.

Rand.—Interim of 70 per cent. for half-year ending Dec. 31.

Robinson.—Interim of 14 per cent. for half-year ending Dec. 31.

Robinson Deep.—Interim of 17½ per cent. for six months ending Dec. 31, being at the rate of 35 per cent. per annum, payable Jan. 31.

Robinson Central Deep.—Interim of 40 per cent. for half-year ending Dec. 31.

Robinson Randfontein.—At the rate of 10 per cent.

Roodepoort United.—5 per cent. for 1907.

Salisbury Gold.—2s. per share.

Simmer and Jack Proprietary.—Interim of 7½ per cent. for six months ending Dec. 31, being at the rate of 15 per cent. per annum, and a bonus of 2½ per cent., payable Feb. 7.

Sons of Gwalia.—Interim quarterly, at the rate of 1s. per share, payable Jan. 25.

South Randfontein.—At the rate of 10 per cent.

Witwatersrand.—15 per cent. for half-year ending Dec. 31.

Witwatersrand Deep.—22½ per cent. for six months ending 31st inst.

MISCELLANEOUS.

Amazon Steam Navigation.—On account of current year of 2 per cent., or 5s. per share, payable Jan. 2.

Behubor Co. (Assam).—Interim of 6 per cent., payable Dec. 19.

"Bodega."—Interim of 1s. 6d. per share on the ordinary shares of £5 each, fully paid, and 1s. 2 2-5d. per share on the ordinary shares of £5 each, £4 paid up, being at the rate of 3 per cent. per annum, payable Jan. 1.

British Steamship Investment Trust.—Interim at the rate of 4 per cent. per annum on the deferred stock, payable Jan. 1.

Brooke Bond and Co.—Interim at the rate of 10 per cent. per annum for half-year ended Nov. 30, payable Dec. 20.

Clerical Medical and General Life Assurance.—Half yearly of 8s. per share.

Flint and Co.—Further of 3 per cent., making 5½ per cent. for year to Oct. 11, placing £750 to reserve, and carrying forward £114.

Great Northern Telegraph.—Interim of 5s. per share.

Hudson's Bay.—Interim of 20s. per share, payable Jan. 15.

Imperial Colonial Finance and Agency.—Interim of 2½ per cent.

Melbourne Tramway and Omnibus.—4½d. per share, payable Jan. 3.

Midland Trust.—Interim of 5 per cent. on the ordinary shares for half-year ending 31st inst.

New Investment.—Interim of 2½ per cent.

Ragalla Tea Estates.—Interim of 3 per cent. on the ordinary shares for year ending 31st inst.

Sao Paulo Tramway, Light, and Power.—Quarterly of 2½ per cent. on the capital stock, payable Jan. 1.

Shawinigan Water and Power.—1 per cent. for the quarter ending Dec. 31, payable Jan. 20.

United River Plate Telephone.—Interim of 3 per cent.

Virginia Carolina Chemical.—Quarterly of $2 per share on the preference stock, payable Jan. 15.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1907, and December 14, 1907:—

REVENUE AND OTHER RECEIPTS.

—	Estimate for the year 1907-1908	Total Receipts into the Exchequer from April 1, 1907, to Dec. 14, 1907	Total Receipts into the Exchequer from April 1, 1906, to Dec. 15, 1906
Balances, April 1:	£	£	£
Bank of England	—	5,507,721	9,514,212
Bank of Ireland	—	1,124,702	1,117,275
		6,632,423	10,631,487
REVENUE.			
Customs	31,023,000	25,107,000	24,197,000
Excise	35,600,000	29,170,000	28,700,879
Estate, &c., Duties	17,600,000	14,150,000	13,850,112
Stamps	5,000,000	3,950,000	3,750,000
Land Tax and House Duty	2,600,000	420,000	300,000
Property and Income Tax	38,000,000	6,850,000	6,442,000
Post Office	17,600,000	11,200,000	10,800,000

Deposits against future queries may be lodged with the Publisher.

R. B.—The company is a growing one, and as it seems to be prudently managed, should be quite safe.

R. R. R.—(1) We are inclined to these in preference. There has been, and is, considerable fluctuation in the metal, but it can produce at a fairly low cost, and there are other products as well. It is well managed. (2) This also is well managed, but the recent fall in the value of its products rather threatens the position. It is possible dividends may have to be stopped for a time at any rate.

D. S.—There has been considerable manipulation in these shares, and we are very doubtful about them. It seems impossible to get really reliable information as to the life of the mine. It is suspected in some quarters that it will prove to be very short; if so, the shares are not worth touching.

W.—Not much catch in them. Master patents all run out and reserves unimportant. Still, there is little danger of loss, and there might be a profit at the wind up.

B. W. J.—(1) All we can say is that the directors now have a fair chance to pull the company round. They may not be successful, and a purchase such as you suggest would be a pure speculation. (2) No. The debentures are probably safe enough, but we think it more than likely that the preference shares may have to go short of part of their dividend in the not too distant future. Sorry for your news. Will bear your request in mind.

E. J. T.—An excellent security, but not likely to appreciate much in the near future.

N.—Not a very marketable security, of course, but quite a good "lock up."

Athens.—Of your selection we would prefer either of those in No. 1. So far as we can find out, there is only a moderate bull account open in them, and none worth mentioning in No. 2.

J. W. S.—You are right, perhaps, to take the course you suggest:—(1) On the basis of 6 per cent. for interest and 4 per cent. for sinking fund, the shares of the mine you hold are worth only about 42s. The others in their order may be summed up thus: — (2) Even on present increased dividend these seem dear, unless the life proves to be much longer than estimated. (3) Presuming there is only a life of eight years left these work out about 4¾. Some estimates give a longer existence. (4) This is, perhaps, the most tempting, as it has the prospect of the longest life. Given 25 years and dividends of not less than 35 per cent., and the investment price is about 4⅛-4 3/16. There are, of course, chances of increased return if working expenses can be reduced. (5) One of the best of this class of mine, but we doubt if they should be touched with the present outlook for the metal. Regret we can enter into details only by letter.

MINING RETURNS.

Alaska Mexican.—Crushed 20,818 tons ore; value, $31,610; saved, 275 tons sulphurets; value, $18,725.

Alaska Treadwell.—Crushed 85,326 tons ore; value, $88,509; saved, 1,610 tons sulphurets; value, $75,951.

Alaska United.—Crushed 19,800 tons ore; value, $24,889; saved, 300 tons sulphurets; value, $10,635.

Antenior (Matabele).—Crushed 688 tons, 178 ozs.; cyanide 500 tons, 42 ozs.

British Broken Hill.—2,636 tons crude ore produced 452 tons concentrates, containing 280 tons lead and 11,752 ozs. silver.

Chinese Engineering.—Output of coal 21,000 tons; sales, 17,000 tons; consumption, 1,600 tons.

Duff Development.—Prospecting dredge, 28 ozs.; No. 1 dredge, 47 ozs.; No. 2 dredge, 36 ozs.; and No. 3 dredge, 26 ozs.; total. 137 ozs.

Durban-Roodepoort.—Quartz milled 11,840 tons, 2,897 ozs.; tailings 8,345 tons, 1,044 ozs,; slimes 3,635 tons, 198 ozs.; total, 4,139 ozs.; profit £5,550.

Empress (Rhodesia).—Riverlea: Crushed 3,000 tons, 380 ozs.

Forbes (Rhodesia). — Veracity: crushed 340 tons, 215 ozs.; cyanide 325 tons, 92 ozs. Dumbleton: crushed 480 tons, 155 ozs.; cyanide 300 tons, 29 ozs.

Great Cobar.—Tonnage treated, 14,850; output matte 1,200 tons; contents 425 tons copper, 1,250 ozs. gold, 7,200 ozs. silver; ingot copper made at Lithgow Works, 385 tons; despatched 348 tons.

Jumbo.—Crushed 2,407 tons, 1,136 ozs.; concentrates 1,337 tons, 460 ozs.; slimes 976 tons, 144 ozs.; total, 1,740 ozs.; profit, £3,775.

Kluchi Gold.—Crushed 323 tons (short), 92 ozs.; tailings 258 tons, 35s per ton.

Mills' Day Dawn United.—Crushed 1,843 tons quartz, value, including residues, £7,333.

Mount Roudny.—Crushed 3,520 tons ore, 474 ozs.; concentrates 67 tons, 217 ozs.; tailings 1,760 tons, 48 ozs.; total, 739 ozs.

North Broken Hill.—Treated 2,380 tons crude ore, producing 402 tons concentrates, containing 282 tons lead, and 7,879 ozs. silver.

"O.K." Copper.—882 tons crude ore, producing 71 tons fine copper.

Rhodesia Matabeleland.—Crushed 1,188½ tons, 352 ozs.

Salisbury.—Crushed 5,050 tons, 1,615 ozs.; profit, £1,185.

Troitzk Goldfields.—Output 522 ozs.; value, £2,037.

Vogelstruis Estates.—Milled 8,000 tons, 2,170 ozs.; tailings 6,205 tons, 548 ozs.; total, 2,718 ozs.

Weardale Lead.—Ore raised, 327 tons; pig lead smelted, 300 tons; average price obtained for pig lead sold, £15 14s. per ton nett.

COMPANY MEETINGS.

COMMERCIAL BANK OF SCOTLAND.

The annual meeting of the shareholders of the Commercial Bank of Scotland, Limited, was held within the head office of the Bank at Edinburgh, on the 17th inst., the Marquis of Tweeddale in the chair.

The secretary read the minute of last annual meeting, and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, stated that the nett profit and balance—£260,000 in all—were £3,300 less than the previous year, but there had been some exceptional outlay on bank premises and otherwise. He was glad to say that the business still showed expansion, and that the deposits had increased by more than half a million, being now over 15 millions, the highest in the bank's history.

The special item calling for remark was the further fall which had occurred this year in the value of the bank's investments, but as the shareholders knew, this was not an exceptional experience, either to similar institutions or among private individuals. To meet the circumstances the directors proposed to take £100,000 from the reserve fund, which to some extent had been built up out of former profits on investments, as well as a sum of £25,000 out the past year's profits, to reduce the price of Consols in the books from 85 to 80 per cent., and to bring the values of the other investments somewhat within the market price. At the same time, it was hoped that ere long a material change for the better in the condition of the money market would take place, and that the reserve would thus recover its old figure of £1,000,000.

The shareholders would observe that the usual dividend of 20 per cent. was recommended, for although the value of the investments had gone down for the present, the return from them was not diminished, and the bank's earning power was in no way affected.

After some remarks by various of the shareholders expressing approval of the report, the same was unanimously adopted, and after some other formal details and the appointment of auditors, the meeting terminated with a vote of thanks to the chairman.

AFRICAN BANKING.

The thirty-fourth ordinary general meeting of the African Banking Corporation, Limited, was held on Thursday, at Cannon Street Hotel, E.C., Mr. J. D. Alexander (chairman of the Corporation) presiding.

The Chief Manager (Mr. G. W. Thomson) having read the notice convening the meeting and the auditors' report,

The Chairman said: However difficult and discouraging South African business has been in most respects during the last few years, there are substantial grounds for believing that we are at length within sight of a better state of things. From the point of view of actual production, both agricultural and mineral, South Africa is said by observers on the spot to be at present in a very thriving condition. With the object of assisting the less wealthy farmers with cheaper money, the Governments of Cape Colony, Natal, and the Transvaal have introduced Bills for the establishment of land banks. These institutions will not interfere with ordinary banking. They may be expected, indeed, to give an impetus to every kind of business in outlying districts and to relieve existing banks of requests for advances against mortgages on farms—a class of business we have not cared to encourage, the security being of too unrealisable a nature. (Hear, hear.) In commercial circles no failures of great importance have been recorded during the six months under review, while firms in good credit have been able to extend their operations. I need scarcely say that this is not the time for banks to refuse facilities to solvent customers. What is wanted in South Africa is more confidence on the part of the people in themselves and their future, and the banks should be the first to lead the way in that direction so far as legitimate trade is concerned. A bank cannot hope to succeed if in unsettled times it unduly restricts advances, forgetting that its proper function is to afford traders of good repute all reasonable assistance, even in times of temporary strain. (Hear, hear.) When prices are low, securities afford a better margin for appreciation, and business generally is safer for banks than when values are inflated. In the mining industry we find that, notwithstanding the strike of white employees and the extensive repatriation of Chinese, the output of gold shows excellent progress. With a sufficient supply of labour the question of the adequate working of the mines would be practically settled. There seems also every prospect of cordial co-operation between the Transvaal Government and the leaders of the mining industry, and such an understanding will tend more than anything else to improve existing conditions and restore the confidence of the investing public, which from many causes has in recent years been so severely shaken. In Orange River Colony business and population have increased greatly since the war. The latter has grown from 77,000 Europeans to 150,000. This I need scarcely say is a most satisfactory feature, for, looking at it from a purely banking point of view, what we want more than anything else is a greater white population, without which we cannot hope to see any extension of the productive industries of the country and of banking business. Glancing at Natal, the picture is not so pleasant. The depression has been felt acutely, and consequently imports and exports show a reduction. Still, there are signs of improvement, and fortunately the prospects of agriculture, which, after all, is the backbone of every country, are more hopeful. An increasing area of land is under cultivation and greater energy is being devoted to every class of farming. The demand for Natal coal is materially advanc-

ing, and at the present time the coal companies find difficulty in supplying requirements. One fact alone will show the enormous importance of the coal industry to Natal, and that is that the mail steamers are now making use on their long voyages of Natal coal. In Rhodesia considerable progress has been made, especially in mining, the increase in the gold output being particularly noticeable. Let us now turn to the balance-sheet. There is, you will observe, a reduction of £80,000 in the note circulation. As trade revives the note circulation will increase. There is also a decrease of some £220,000 in current accounts and deposits, but an increase of £48,000 in drafts, acceptances, endorsements and bills re-discounted. Looking now to the other side, severe critics may remark that the bank is in altogether too strong a position. A million and a-half in cash and Government securities seems at first sight excessive for a bank whose total assets amount to only five millions. The policy of the board, however, since the foundation of the bank has been to look to safety first and profits afterwards. With regard to the depreciation of securities there is one point I wish to emphasise, namely, that the balance-sheet shows the securities at the market price of the day the balance was struck, and I would specially accentuate this fact, that we do not require to take anything from the reserve fund to write down the value of our securities because we have made provision half-year by half-year, not only for bad and doubtful debts, but for depreciation of all the stocks we hold. (Applause.) We have provided for the latter purpose during the last ten years out of current profits upwards of £85,000, which would have been available under ordinary conditions for increasing the dividend or adding to the reserve. This £85,000 is, of course, exclusive of the amount that was applied some years ago to meeting the loss of £40,000 through gold commandeered during the late war, and exclusive also of the necessary provision for bad and doubtful debts at the close of each half-year. Our securities consist chiefly of Consols and Cape Government stock. The latter we have to hold in accordance with the provisions of the Cape Bank Act as security for our note issue. Bills of exchange purchased show a decrease of £225,000. That diminution will not surprise anyone who is aware how shipments from this country to South Africa have fallen off during the last six months. In bills discounted, loans and advances the figures have gone down by £186,000. After making provision for bad and doubtful debts, including, I regret to say, a still further depreciation of securities that were once supposed to be practically safe from serious fluctuation, the profit for the half-year is £93,500. After placing £2,000 to the credit of the staff guarantee and savings fund, and after the usual deductions for rebate on bills and depreciation of furniture, there remains £21,794, out of which we propose to pay a dividend at the rate of 6 per cent. per annum, as we have done for the last 10 half-years, carrying forward £9,794—that is about £800 more than we carried forward at March 31. The result of the half-year's working has been achieved in spite of persistent difficulties. I may add, if I am correct in my view, that good times—or, at any rate, better times—are approaching. Our bank is in an excellent position to take advantage of the opportunities to extend its business and increase its profit, which a return of confidence will naturally create. (Applause.)

Mr. R. Littlejohn (deputy-chairman) seconded the motion, which was carried unanimously, and the proceedings terminated with a vote of thanks to the chairman, directors and staff.

COMMONWEALTH OIL.

The second ordinary general meeting of the Commonwealth Oil Corporation, Limited, was held on Wednesday at the Westminster Palace Hotel, S.W., Sir George Newnes, Bart., M.P. (chairman of the company), presiding.

The Secretary (Mr. Charles F. Jones) having read the notice convening the meeting and the report of the auditors,

The Chairman said: I am glad to be able to say that since our last general meeting the progress which has been made is more than satisfactory. Very important developments have taken place, and forecasts have become accomplished facts. The railway is now in full working order for all the purposes of the company. Both in the period of construction and the cost, the estimates of our engineers have proved to be correct. The railway has been built in a thoroughly workmanlike and efficient manner, and, in a word, the line is worthy of the great undertaking it is to be the means of developing. The average cost of railway construction in New South Wales is £12,800 per mile. Our line, though the greatest possible care has been taken to ensure the efficient and substantial character of the work, has cost between £4,000 and £4,500 per mile. (Hear, hear.) Having regard to the fact that it is admitted to be one of the best constructed lines, this speaks well for the care and economy that has been shown. A very large tract of country has been opened up, and there is on it an abundance of timber. There are valuable deposits of clay and ironstone, besides coal and shale. There is little doubt that the trade in cattle and grain will develop, in addition to the requirements of what must eventually be a largely populated district. Of the other vast assets the corporation possesses, the first and most important are the immense shalefields on either side of the Wolgan and Capertee Valleys, which, as the result of numerous adits, trial shafts, and long tunnels, the combined length of which is fully two miles, justify the claim that they are the largest deposits of the kind known in the world. Everyone in Scotland knows, or ought to know, the commercial value of shale, and Scotch people are generally considered to know a good thing when they see it; but in this instance we possess an oil shale such as does not exist in Scotland, except as a geological curiosity. Scotch shale yields at most 30 gallons of oil per ton, while the Wolgan [illegible] 150 gallons, and the process of distillation is the same in both cases. (Hear, hear.) The corporation's shalefield is, therefore, a gigantic oil field, and it is well to point out that it is not at all speculative in character, but is as certain a certainty as a proved coalfield. It must be clear that in this shalefield alone there are great possibilities for the corporation. Scotch companies are advancing by leaps and bounds, and the dividends show eloquently the profits that can be made even with shale containing only 30 gallons to the ton, and I may add that in many cases it does not exceed 20 gallons, in spite of the keen competition of the petroleum companies and the much lower prices which prevail here as against those in Australia. It is noteworthy that in Scotland [illegible] are looked upon as such a sound investment that the Pumpherston shares stand at a price to yield £3 8s. per cent. The Scotch shale companies are capitalised at about 1½ millions, and their market value to-day is 3 millions. The [illegible] seam of coal we have discovered has been developed to give 400 tons a day. The coke we are making from this contains only 9 per cent. of ash, and is, therefore, in great demand for large quantities. (Hear, hear.) This trade will be a substantial addition to the earning power of the company. Possessing, as we do, the largest and richest shalefield in the world, we know that when the reports and refineries are completed we shall be able to treat 300 to 400 tons of shale a day, producing 80 to 100 gallons of oil per ton. Even this large quantity can, and probably will, be largely exceeded. We are already earning profits from three sources—(1) the sale of export shale; (2) the sale of coke made from the rich seam of coal we have discovered; (3) the successful trading of the business purchased from the New South Wales Shale and Oil Company. We consider that a dividend of 6 per cent. on both classes of shares for the half-year ending June 30 next is practically assured. (Hear, hear.) We consider it more than probable that the dividend of 6 per cent. on both classes of shares for the entire year ending at that time will be available. If the hopes we entertain as to our contracts are fully realised, it is possible an even larger dividend may then accrue. I have now to make an important announcement, which some of you may anticipate with regard to the future developments of our property. The directors have decided to make a debenture issue. It was felt that, with the present abnormally depressed condition of the market, when shares of all denominations are at an artificially low price, it would be unfair to the corporation to issue deferred shares, which have been specially reserved for the securing of further capital, a contingency which the directors have long foreseen to be probable in the face of a company possessing such an exceptionally valuable property. In connection with the debenture issue, an option is being given on the deferred shares which should make the investment additionally attractive. Briefly, the proposal is as follows:—That £150,000 of debentures should be issued in bonds of £50. The holding of these debentures, in addition to the 5½ per cent. interest, carries with it the option of obtaining at any time during a period of 18 months the remaining 75,000 deferred shares on payment of £2 per share in proportion to each debenture holding. The advantage to the debentureholders in this offer is that if the deferred shares stand at a higher price than £2, they will be able to acquire them at the latter figure, and if they do no go beyond this, there is no compulsion to take them up. The directors and their friends are prepared to subscribe for half the debentures, if necessary, and the indications of others coming in are such that I may say the issue is practically assured. The report was adopted.

An extraordinary general meeting was subsequently held, at which a resolution was passed making various alterations in the articles of association.

The Chairman explained that the alterations were necessary in order to comply with the requirements of the Stock Exchange Committee.

The proceedings then terminated.

TANGANYIKA CONCESSIONS.

The ordinary general meeting of the Tanganyika Concessions, Limited, was held at Winchester House, Old Broad Street, London, E.C., yesterday, Mr Tyndale White (chairman of the company) presiding.

The Secretary, Mr. L. Scotland having read the notice convening the meeting and the auditors' report,

The Chairman said he thought this was the first occasion on which they had been able to present accounts in the same year as that in which the financial period of the company ended, and they were anxious to bring things up to date before meeting shareholders together. Since the last meeting the mining and railway business had been progressing favourably, and notwithstanding the difficulties which they had to encounter in many directions, their position at date was satisfactory. Shareholders would be aware that rumours of a damaging nature—entirely devoid of any foundation respecting their financial position had been freely circulated. They as a board had done their utmost to contradict certain of these reports as they appeared, but they would recognise that the power of a board of directors in that direction was limited, and that disclaimers of [illegible] statements from the managers of a concern [illegible] carried the same weight as comments which were supposed to be impartial and in the public interest. He knew the shareholders were waiting for what he had to say with regard to Mr Freshville's report.

but as the question was a technical one, and all the arrangements were in Mr. Williams' hands with regard to the visits of two independent engineers who recently reported on the Katanga properties, he had asked Mr. Williams to deal with the matter as fully as he felt able to do. Mr. Williams would further give them the latest information about mining and railway assets, so he did not propose to touch these subjects. Running briefly through the accounts, there was not much to say about them, as they were fully set out and most of the items explained themselves. The capital remained the same as at the date of the balance-sheet. The debentures authorised at last meeting were all taken up, and the figures shown as having been paid on July 30 represented the approximate total amount called up to that date, namely, £750,000, plus £9,000 odd paid in anticipation of calls. Since that date three further calls of £1 each had been made, making a total amount of £1,500,000 called to date. The premium on shares issued remained on the balance-sheet as heretofore as a reserve fund, after deducting the debit balance of the profit and loss account for the period referred to. The items under the head of creditors were chiefly made up of sundry stores ordered, freights on the same, salaries and bills drawn by the African agents, which amounts had nearly all been paid. The transfer of properties to the Union Miniere du Haut Katanga had entailed an enormous amount of work, and great credit was due to the company's African staff, and particularly to Mr. Watson, for the manner in which this had been carried out. The company was also taking over a large portion of the mining machinery and stores, at a valuation to be agreed, but by the date of the next balance-sheet these figures would be properly adjusted. The same remarks applied to the item in connection with amounts spent on behalf of the Union Miniere du Haut Katanga for mining work. The profit and loss account was for two years, and they would see nearly the whole of the debit balance carried to premium account was in respect of interest on debentures and expenses in connection with the debenture issue. They would recollect that at the last general meeting a sum of 2,000 guineas was voted to the directors as a special remuneration, in view of the very moderate character of their fees over a long series of years. That sum did not appear in the accounts, because the directors, on due consideration, decided not to draw it at the time. Very onerous negotiations were then taking place, and the directors desired those negotiations to mature before they put the company to further expense. During the past year those negotiations with their Belgian partners had been successfully and happily carried through, and the directors felt that if the general sentiment of the meeting was similar to that of last year, they would be glad to take advantage of the offered liberality. That matter he would put to them before they separated. They would no doubt recollect that the ordinary fees of the directors amounted to £750, which was not a large amount when divided amongst six, especially in view of the large interests the directors had under their charge. They had had their ups and downs, but he thought he might congratulate them on the results of the work, which had fully justified expectations. Although the London market had been passing through a severe crisis, and the price of the company's shares had depreciated in consequence, yet their prospects were exceptionally good, and the reports from all their engineers and managers had proved beyond doubt that the mineral deposits of Katanga were exceedingly rich. He would not detain them further, but would move the adoption of the report and statement of accounts to June 30, 1907, and after Mr Williams had spoken, there would be an opportunity to listen to shareholders' questions.

Mr Robert Williams said that during the year the Union Miniere Company was formed in Brussels with a working capital of £400,000, to work the mines discovered up to December 9, 1906, including the great copper mines. Their management and engineering staff had to be completely reorganised to suit the changed condition. The Union Miniere Company appointed Mr. Bertholet as their agent in Katanga, in consequence of which Mr. George Grey resigned, and he (Mr. Williams) agreed to continue the technical control of the whole of the company's mines for ten years, with a further call on his services for another ten years. Mr. George Grey visited several of the copper districts of America with the object of securing the best practical mining engineer and metallurgist that could be got for the firm, with special knowledge of copper smelting. At the same time they made inquiries in other directions, with the result that Mr. Allan Gibb was appointed for his firm with the unanimous approval of Messrs. Farrell, Grey, and all concerned with him in the real success of their enterprise. After the formation of the Union Miniere Company to take over all the Katanga properties, he was asked by the group who had found them the greater portion of the two millions raised last year, if they would allow Mr. Atherton, their engineer, to make an independent report on those properties for them. At the same time, the Consolidated Mines Selection Company asked if Mr. Frecheville could go to report for that company. There was no scheme connected with the visit of these engineers to the mines. He submitted the names and objects of these engineers to a board meeting of the Miniere Company in Brussels, and, on his recommendation, the board of that company agreed that these engineers should be shown every facility to examine and report on the properties of the company to their principals, on condition that the Union Miniere Company received a copy of each report, and that it should not be published without the sanction of all parties concerned. Mr. Williams went rather exhaustively into further details concerning the company's business, and also explained their treatment of the ores.

Lord Arthur Butler seconded the resolution.

Dr. Blundell asked whether the British South Africa Company had agreed to commute their one-third interest in the Kananchi mines for a 3 per cent. royalty, and remarked that if Mr. Sheffield Neave had returned from South Africa they would be glad to hear his opinion on the mines.

Mr. Williams said the British South Africa Co. were not likely to accept a 3 per cent. royalty for their one-third interest. The 3 per cent. royalty was to encourage tributers on gold mines. Mr. Sheffield Neave had not returned from South Africa.

The resolution was carried unanimously.

The retiring directors, Messrs. Sheffield Neave and C. F. Rowsell, were reappointed, and on the motion of Dr. Blundell an honorarium of £3,000 was voted to the directors.

The proceedings terminated with a vote of thanks to the Chairman.

ZAMBESIA EXPLORING COMPANY.

The ordinary general meeting of the Zambesia Exploring Company, Limited, was held yesterday, at Winchester House, Old Broad Street, E.C., Mr. Tyndal White (chairman of the company) presiding.

The Secretary (Mr. L. Scotland) having read the notice convening the meeting and the auditors' report,

The Chairman said: We were anxious to hold this meeting on the same day as that of the Tanganyika Concessions, Limited. We have, therefore, put off calling you together until now in order that you could have before you a copy of that company's report. I have already had the pleasure of meeting some of you in this room early in the day, and you will have heard the remarks I made, also those of Mr. Robert Williams, regarding the Tanganyika Concessions, Limited, in which company we are so largely interested. I need not again go over the whole of the ground. I need only say that matters in connection with that company are very promising, and things generally look exceedingly well. Mr. Williams will, I am sure, give us some interesting information when he speaks, but I do not wish to anticipate what he may have to say by dealing with matters which had better be left for that gentleman to deal with, and I will, therefore, at once refer to the accounts before us, although I do not think I need detain you long in connection with these, as there is not much in them which requires explanation from me, and I believe they are clearly set out. I presume it is your wish, as usual, that we take the reports and accounts as read. Our capital still remains the same, of which 459,645 shares have been issued, and the calls which were in arrear at the date of the accounts have since been paid. In view of the depressed state of the money market and the depreciation in the price of shares, we have considered it advisable to write down all the shares which we held in other companies, and which had a quotation on the London market, with the exception of Tanganyika Concessions, Limited. As mentioned in the report, we have not written anything off our holdings in the company, because we fully believe that these shares and debentures are well worth the price at which they are entered in our books, and although a large depreciation is shown especially on the debentures, yet we consider that the prices now ruling on the London market are only temporary, and that before long we shall see a much higher market value on these securities. I mentioned to you when we last met that we had arranged to take up Tanganyika debentures in proportion to the shares we held, and in order to carry out the arrangements we had entered into we sold some of our shares in the company, and this accounts for the profit shown on the profit and loss account in respect of realisation of shares. The financial crisis in the London market has caused us some anxiety, and in carrying out the policy of writing off the price of our shares already mentioned, we have considered this to be the best and safest method that could be adopted in the real interests of our company. The shares and debentures now stand in our books at £417,592. We have also reserved against any debts that appear doubtful. We have done very little work in Southern Rhodesia for reasons you are well aware of, as we consider that our holding in Tanganyika Concessions, Limited, fully justifies our concentrating all our efforts north of the Zambesi, and the results of our policy in this direction in the past have certainly proved this to be the right course to pursue. I do not wish to say much with regard to the options we have secured on the coal and diamond farms, as we want to know exactly whether these are likely to be of value before saying too much about them. Before I call upon Mr. Williams, I will formally move that the directors' report and accounts for the period ended June 30, 1907, be, and the same are hereby approved and adopted. I will ask Lord Arthur Butler to second this, and then Mr. Williams will speak.

Lord Arthur Butler seconded the resolution.

Mr. Williams then, after a few preliminary remarks, repeated the speech he delivered at the Tanganyika meeting.

The resolution was carried unanimously.

On the motion of Mr. Rowsell, seconded by Lord A. Butler, the retiring directors, Messrs. Tyndale, White, and Sheffield Neave, were reappointed.

The auditors, Messrs. Cooper Bros., were reappointed on the motion of Mr. J. P. Gent, seconded by Mr. F. A. White.

Mr. Hilda proposed a vote of thanks to the chairman, directors, and especially Mr. Williams.

The Chairman, in acknowledging the vote, said that from small beginnings Mr. Williams had created these huge undertakings, and they who were witnesses every day of his perseverance, pertinacity, and invincible courage, in face of every sort of discouragement a few years ago, could testify as to his value to the country, He did not believe any other man in London could have done it.

CHAMPION REEF GOLD MINING.

The nineteenth ordinary general meeting of the Champion Reef Gold Mining Company of India, Limited, was held at the Cannon Street Hotel, Cannon Street, E.C., under the presidency of Mr. John Taylor, M.Inst.C.E. (the chairman of the company).

The Secretary (Mr. F. H. Williams) having read the notice convening the meeting and the report of the auditors,

The Chairman recapitulated the results of the past year's operations at the mine, and stated that out of the profits £20,779 was retained for paying income-tax, which was a very large sum, and seemed out of all proportion to the profits. The reason for this was that the assessment for the tax was based upon the profits for the three previous years ended September 30, 1904, 1905, and 1906, when the company's profits were very much larger. But for the alteration brought about this year by the Government in their new Finance Act in connection with the Budget, the directors would have claimed to be assessed upon the profits for the years ended September 30, 1905, 1906 and 1907, which would have reduced the amount payable by the company for income-tax by over £4,000. In the year under review the expenditure on buildings, machinery, plant, &c., and upon the principal shafts, properly chargeable to capital account, amounted to £78,075, with the further calls paid upon the Kolar Mines Power Station shares, exceeding the previous year's expenditure by about £3,000. Continuing the policy of devoting a substantial portion of the profit towards replacement of capital, the directors had allocated £55,000 to this purpose, the object, of course, being to make the cash capital of the company last as long as possible. They anticipated a reduction in expenditure on capital account at the old mine in the current year. In addition to the outlay he had referred to, the Dharwar option had cost them altogether £10,353, and he felt sure that the shareholders would have been pleased to note the results attained so far on this property. On their old Champion Reef mine a greater amount of mining work had been accomplished than in the previous year, and it was felt that it was most important to push on the development of the reefs with all possible speed in order to get through the poor zone of ground as soon as possible. The Mysore mine was doing as well, perhaps better than ever, and the Ooregum mine had certainly shown improvement recently in the deeper workings. Both those great mines were deeper than this company's on the dip of the reef. The reserves of ore were computed at 381,000 tons, or almost the same as the estimate of twelve months ago. On the present scale of crushing this was equal to considerably over two years' supply for the mills, irrespective of the ore opened up as development proceeded. The work done at the mine during the past year reflected the greatest credit upon Mr Gifford (the superintendent) and all who had assisted him. He concluded by moving the adoption of the report.

Mr. Edgar Taylor, in seconding the motion, dealt at some length with the mining operations during the year. In the course of his remarks he said that, on reviewing the whole situation, he thought it would be clear to the shareholders that in some of the deepest working quartz had been met with of good value, but that, generally speaking, the smaller size of reef had resulted in lesser tonnage developed for a given amount of work. It was no part of his duty to forecast the future, but he was prepared to state emphatically that the hopeful views expressed by the directors continued to be held by the managers.

A short discussion followed, to which the Chairman replied, and the report was then unanimously adopted.

WESTRALIA MOUNT MORGANS GOLD.

The ninth ordinary general meeting of shareholders in the Westralia Mount Morgans Gold Mines Company, Limited, was held on Thursday at Winchester House, Old Broad Street, E.C., Mr. J K Spence (chairman of the company) presiding.

The Secretary (Mr. Henry Lattey) having read the notice convening the meeting and the auditors' report,

The Chairman said: I have very little to say to you because the report is a very full one. However, I might add a few words about the depreciation which has been written off, amounting to £21,200, because no recommendations had been received from Australia at the time of making up the accounts. Since then we have received that information with regard to depreciation, and we find they advise writing off £12,412 only. That is owing to the fact that the value of much of the machinery had already been written down so low that it might be considered it was valued at the price of scrap iron, so that it cannot be written down any lower. We, however, have written it down according to previous years' averages, so that there is a good deal of difference between the amount. However, that is really a very small matter, and I do not think it will make any difference in the working of the mine. The cost of treatment has been considerably reduced. It was £1 9s 4d., and it has been reduced to £1. That, I think, is very satisfactory. Of course, we ourselves are trying to keep down expenses in every possible way, and we hope that next year's working will show a considerable reduction.

Mr W H Crowe seconded the motion.

Mr White said that with regard to depreciation, the difference between the amount that had been sent over from Australia and the figure the directors had adopted was very nearly £9,000. This would reduce the debit balance to profit and loss to a considerable extent, and this he considered was very satisfactory.

Mr Frost said he considered the report was satisfactory, and he desired to congratulate the present board upon what they had done, and he wished them every success. He believed that they would now be able to make something of this property, for he considered that there was something to be made of it.

Mr. Shaw remarked that the administration expenses seemed to be very high. With regard to the item of £3,650 for salaries, he should like to know whether the manager's salary was included in that item.

The secretary replied in the negative.

Mr. Shaw said that all the original capital of the company had been expended and the syndicate was now only a small one, with a capital of about £20,000, but the administration expenses came to close on £5,000, or 20 per cent for the year on the capital. With regard to the work at the mine, although they had been at work for many years, they did not know what was below the 3rd level, although experts told them that there was a thread of ore going down; but at the same time other mines in the district had been opened out as far as 1,000 and 1,500 ft.

A Shareholder remarked that he thought the expenses which had been alluded to were scandalous, but these referred to a period up to the end of last year, and the present board were not responsible for them.

Mr. Brodrick inquired what amount for the ensuing year the board estimated the charges would be. If an answer were given to that question it might possibly satisfy the shareholders.

The Chairman said that that was a very difficult question for him to answer. The board had written to Mr. Morgan and asked him to reduce his own salary, but sufficient time had not elapsed to enable his answer to be received. With regard to the other expenses, shareholders could not expect the board to cut down the salary of the mine manager nor the wages of the miners. They were obliged to pay current rates. With regard to the London expenses the directors were working without fees of any sort or kind, and the general office expenses had been cut down by 50 per cent. After a little further discussion, the report and accounts were adopted.

QUEENSLAND COPPER CO., LTD.

The annual general meeting of the shareholders in the Queensland Copper Company, Limited, was held yesterday, at the offices, 6, Princes Street, London, Mr. George Ormiston-Milne (the chairman) presiding.

The Secretary (Mr. J. G. Tait) having read the notice convening the meeting,

The Chairman, after dealing with the revenue statement, went on to say that they had hoped to pay at least 20 per cent. dividends on the preference shares, and a proportionate amount on the ordinary, but the collapse in the market had upset all previous calculations. Their attention, however, was not entirely confined to finance. They had succeeded in increased their mining output. They had actually raised 14,223 tons, a considerable advance on the reduction of the previous year, but the greatest feature of the year, apart from finance, was the increase in the ore reserves. It had previously been alleged that, however good their results at working had been, they had a mine which was possibly a good one, but could show only unimportant reserves. The figures of the previous year's reserves were about 10,000 tons, but these had now largely increased these figures, so that they stood at last at over 30,000 tons. Thus, they considered, placed them in a good position. He expressed the belief that their property and their installation warranted the expenditure of capital in the manner adopted by them, and every [illegible] felt convinced that every penny of judicious expenditure upon the mine would be remunerative. They were pleased to know that the Mount Perry—where in the eleventh level there was 1,140 ft. below the surface—was the deepest copper mine in Queensland. At the southern end a rise of 140 ft. from No. 8 level south had, in the words of the manager's report, "disclosed a very promising lode." They looked upon this as a very important statement, because this work had been done in the neighbourhood of ground [illegible] to say the least of it, rather doubtful. They were confirmed in their belief that they had in Mount Perry a very fine property, and one that could be developed to a great extent. With regard to Nymagee, he reminded them that in the words of the manager's report, that "this property is improving with the further development work now being carried out in it, of becoming a greater producer than Mount Perry." New Mosaic had not turned out quite as anticipated during the year on the western ends, but below No. 7 level good ore had again been found, and the [illegible] the fourth level had been commenced, and there were hopes of a continuance of good ore. During the last two months of the past year and the first two of the present the grade of ore had continued to improve. Mount Perry ore had improved 1 per cent., Nymagee one-half of 1 per cent., and New Mosaic one-half of 1 per cent. In the early part of the year the grade had improved, and this fact, coupled with the coal strikes, which put up the price of fuel, [illegible] additional cost to their working [illegible]. The result [illegible] there, as soon as more [illegible] smelting [illegible] as cheaply as possible, and thus [illegible] being the same as in the previous year. Should the [illegible] up to their anticipations, and should there be [illegible] [illegible] to make a profit [illegible] [illegible] during the present year. [illegible] [illegible] [illegible]

cost under both these heads. The great depression in the copper market had adversely affected their profits. He thought an improvement in prices would soon come. In conclusion, the Chairman moved the adoption of the report and accounts.

Mr. J. Noel Sparks seconded the motion, which was carried unanimously, and a vote of thanks to the chairman terminated the proceedings.

PAHANG CONSOLIDATED.

The first ordinary general meeting of the Pahang Consolidated Company, Limited, was held on Monday at Winchester House, Old Broad Street, E.C., Mr. John E. Champney presiding.

The Secretary (Mr. Arthur Giffard) having read the notice convening the meeting, and the auditors' report,

The Chairman said: The reports this year have been necessarily very short, mainly because we received our superintendent's report some weeks ago, and as we thought it would be of considerable interest we at once sent it out to the shareholders on November 5. After dealing with the accounts the Chairman continued: As regards the mines, you will have noticed that while the developments on Nicholsons' and Frasers' (Semiliang) lodes have up to date been rather disappointing, we have opened up what appears to be a great mine in Willinks. The developments at Semiliang in Frasers' mine have exposed some 40,000 tons of low-grade ore, which, with so large a lode, can no doubt be worked at a good profit. When crushing is in full swing this mine will no doubt be reopened, and it has been left ready for the purpose, and I think we may confidently expect to open up large bodies of ore, and even if it should prove to be of the same grade as that already exposed, it should show a good profit when treated in bulk. As regards Willinks' mine, the developments have been "most satisfactory." Stoping ground has been opened up at each of the successive levels, but the chief feature is the size and richness of the lode in the lowest level. The five upper levels were supposed to have been nearly worked out by the old company, but, on the drives being continued further considerable quantities of ore have been opened up. In the adit level the ore has averaged 1¼ per cent. The 60 ft. and 120 ft. levels show an average of 2¾ per cent. and 1¾ per cent. respectively. In the 180 ft. level the ore is estimated at over 12,000 tons, averaging over 4½ per cent., and in the 240 ft. level the superintendent estimates that there is 45,000 tons of 2 per cent. ore. In the bottom (302 ft.) level he reports nearly 84,000 tons of ore, averaging nearly 5 per cent., and since the close of the year these reserves have been largely added to. The lode is of immense size, and in the three lowest levels crosscuts have proved it to be as much as 38 ft., 46 ft., and 63 ft. wide respectively. If an average of 3 or 4 per cent. can for some time be maintained, you will have, I think, every cause for satisfaction, for I may tell you that, when accepting the management in the East, the Borneo Co., Limited, based their calculations on only 1 per cent. ore, and expected to be able to show good profits at that. The main shaft at Willinks mine has been further sunk, and at the end of September was down to a depth of 406 ft. The crosscut to the lode was started in September at a depth of 402 ft., 100 ft. below the present bottom level, and up to the end of that month had been driven 37 ft. This crosscut and the drive on the lode have to be driven some 500 ft. before getting under the rich chute in the levels above. We have not yet been able to reopen any of the numerous other mines on the property, but I should mention that it is hoped to do so later on. All the necessary machinery and plant has now been dispatched some months, and a great deal of it is no doubt already erected. The superintendent had hoped to start the battery at the beginning of the new year, but there has been the usual inevitable delay, and a cable lately received states that it is expected to start in March. In the meantime 20 head of stamps in the old companies' mill were put in running order. The first run was a very satisfactory one, and yielded some 50 tons of tin oxide from 950 tons of ore, or an average of 5¼ per cent. A breakdown at the battery caused a suspension of operations, but the latest news is that it was intended to run 40 of the old stamps this month, and the superintendent estimates that about 90 tons of black tin will be obtained from the run. As to our future finance. When we found that the ore we developed was of so much better grade than we had anticipated, we made our tramway more durable, we built a wharf at Kuala Reman, and we contributed to the cost of dredging, so that we might deal with steamers and boats of larger size—we felt, in fact, that a mine as well proved as ours should be afforded the best possible freighting facilities, yet, in spite of this extra outlay, the directors have no reason to fear that the capital subscribed will not prove fully adequate, and they do not contemplate any further issue of capital.

Mr. Henry Frisby seconded the motion, which was carried unanimously, and the proceedings closed with a vote of thanks to the staff, directors and chairman.

GENERAL MOTOR CAB.

The first annual ordinary general meeting of the General Motor Cab Company, Limited, was held on Monday, at Salisbury House, London Wall, E.C., under the presidency of Mr. Davison Dalziel (the chairman of the company)

The Secretary (Mr. R. Gordon) having read the notice convening the meeting and the report of the auditors,

The Chairman said: The period under review was one of preliminary organisation entirely. During the first year following the incorporation of the company, your garage and workshops, covering an area of over six acres, were built, and considerable sums of money were expended in preparing and teaching men to drive the cabs, and, generally speaking, in organising the successful working of the enterprise. There were practically no returns to off-set the preliminary heavy outlay, and it was only to be expected that the profit and loss account would show a debit balance at the end of the year. I am glad that it was comparatively so small a balance, but it was a foregone conclusion, and I am satisfied that none of the shareholders expected it to be otherwise. You must bear in mind that it was only a few weeks before the termination of the year under review that the new police order relating to the use of taximeters was issued, and between that time and the closing of the accounts we were naturally only able to put a very small number of cabs on the streets, so small a number, in fact, that the returns derived from them were trifling compared with the entire year's expenses which had gone before. What, however, is much more important to you is to know what the company has been doing since the closing of these accounts. Although on May 13 last there were only 86 cabs in work, we finished the period of the six months on November 13 with no less than 467, and the average number of cabs working per day was 306. The average takings per cab per day during the whole of that period was £2 3s 6d, thus exceeding the estimate set out in the original prospectus by 8s 6d per day. (Applause.) As has been mentioned in the report, 500 cabs have been actually delivered, and we are now beginning to receive deliveries of the second order of 500 Renault cabs, which, together with the other vehicles ordered, will all, no doubt, soon be running and earning revenue. For the six months from May 13 to the 13th of last month, the nett profit, with an average of only 306 cabs at work per day, is £41,887 9s. 10d. (Applause.) These profits are arrived at after every possible proper charge has been debited against the accounts. Upon these results we have decided to declare an interim dividend at the rate of 7 per cent. per annum on the preferred ordinary shares for the six months ended November 13. I need hardly point out to you that a considerable part of the general expenses of this business are as great for the working of the 306 cabs as they would be were the whole 1,500 cabs we shall shortly possess bringing in their daily bread. It is my opinion, and that opinion is shared not only by all my co-directors, but by the management also, that the daily receipts per cab will not diminish as the number of cabs increases. We confidently believe, in fact, that the present averages will be maintained when we have our full complement of cabs, while the proportionate running expenses will be even lower than they are to-day. I now want to deal with that ever-present bogey of depreciation. In the first place, your cabs are always kept up to their original state of efficiency out of revenue. While this is going on your special reserve for depreciation, which will write off the first cost of the cab in six years, is being set aside, so that you will still possess these 500 cabs in good and efficient condition at the end of the six years, and you will also possess a reserve equal to their original cost. And now I come to a question which is of considerable interest to you all, and that is the question of competition. I do not think the shareholders of this company need fear any competition which may come up against them. The mainspring of the success of a concern such as ours is, unquestionably, to be found in its economical working, and I venture to state that it is an utter impossibility for a company with a small capital and a small number of cabs to bring the average of the expenses of upkeep and the expenses of administration down to within anything like the average in this company, owing to the purchasing power which our large capital gives us.

Mr. Edgar Cohen (Managing Director) seconded the adoption of the report, which was agreed to without discussion.

Mr. Francis Kemp, deputy-chairman of Williams Deacon's Bank has resigned his seat at the board, after a connection with the bank of nearly half a century, and Mr. George Henry Gaddum has been elected deputy-chairman.

Canada Company.

Sales of land by this company during the eleven months ended November 30 were again on a very moderate scale, but exceeded those for the corresponding period of 1906 by 28¼ acres at 262¼ acres, while the price per acre realised was $3.01 better at $30.30. Land leased with right of purchase was also greater in quantity at 5,633¾ acres, but yielded an average of $12.54 only compared with $16.78, while 21 town lots sold brought an average of $48.12 against two for $225 each. The total operations, therefore, resulted in an increase of 469 acres at 5,901¾ acres disposed of, but a decrease of $3.86 to $13.44 in the average price per acre, the increase in the 1894 valuation being $2.70 against $2.88. Land leased without option of purchase was 11,995 acres or 4,075 acres more, but the rents were only $1,028 up at $3,424, while no more than 3,800 acres of leasehold land was converted to freehold against 5,688 acres last year. Total receipts from all sources were $5,153 less at $23,458, and the dividend for the half-year ending January next is consequently reduced by 3s. to 11s. per share or the same as was paid two years ago. Funds in hand on November 30, consisting of bank balances and bills receivable, amounted to £7,368, while the liabilities were £1,578, exclusive of £5,014 to the credit of Settlers' Savings Bank account for sums deposited by lessees to meet the rent and purchase money of the lands occupied by them. The capital reserve fund invested in Metropolitan 3 per cent. stock remains at £8,463.

ADDRESS:—THE PUBLISHER, PRINTING HOUSE SQ., LONDON.

Mr. R. B. Haldane and "Public Opinion."

The Right Hon. R. B. Haldane, M.P., Secretary for War, has addressed the following letter to the Editor of PUBLIC OPINION:—

WAR OFFICE, 1st October, 1907.

Dear Mr. Parker,

I think that in the new form of "Public Opinion" under your editorship, you do well to make prominent what is concrete and living in the shape of the opinions maturely formed of men who are trying to do the work of the nation and of journalists the standard of whose criticism is high. What interests people is that which is expressed in a concrete form and has in it the touch o humanity. The views of strenuous spirits and the criticisms of really competent critics given in their own words comply with this condition. Your paper will succeed if it can only keep up to this standard, and I think you have brought it on to the right lines.

Yours faithfully,
R. B. HALDANE.

Percy L. Parker, Esq.,
Office of "Public Opinion,"
Temple House, Tallis Street, E.C.

PUBLIC OPINION.

A Weekly Review of Current Thought and Activity.

TWOPENCE WEEKLY.

Printed for the Proprietors by ST. CLEMENTS PRESS, LIMITED, Newspaper Buildings, Portugal Street, Kingsway, London, W.C. and Published by CLEMENT WILSON at Norfolk House, Norfolk Street Strand, W.C.—DECEMBER 21, 1907.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XX.—No. 521. SATURDAY, DECEMBER 28, 1907. (Registered as a Newspaper.) Price 6d.
New Series.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first; its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHERS' NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **16s. 6d.,** or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility or statements made therein.

The Investors' Review.

The De Beers Problem.

Much must still be considered dark therein. It is an invariable rule with this journal to distrust public corporations that hide their affairs, and ever since it came prominently before the public as a great dispenser of wealth we have distrusted De Beers. In one sense we have seemed to be without adequate basis for this attitude. Year after year the company has earned large revenues and paid most brilliant dividends, but the longer it did this the more we feared, and now the always inevitable has come—De Beers has suspended dividend payments on its deferred shares, and a new chapter in its history has been opened, sure to be prolific of strange events. Nothing in the report for the company's past year, ended June 30, gives the least warning of what was at hand. The sales of diamonds are entered at £6,452,596, the largest in the company's life, and £844,878 more than in the preceding year, and fully £1,600,000 more than two years ago. Profits appear at £2,725,022, or with the balance of £757,601 brought forward included, at £3,482,623. It was thus easy to pay 40 per cent. on the preferred and 70 per cent. on the deferred shares, and still to show £932,623 left to carry forward, subject to income-tax payments. Other resources seemed just as eloquent of impregnable wealth. Debtors, diamonds on hand, and bills receivable (since paid) and cash figured up at £1,993,810, of which £750,000 was lent to the Cape Explosive Works, owned by the De Beers Company. Against this the company was liable for £1,255,000 on account of dividends declared, but not paid at the date of the balance-sheet, and for floating liabilities to the amount of £564,298, including a balance of £100,000 required to liquidate the balance due for the income-tax charged by the British Government, in conformity with the decision of the final Court of Appeal. Deduct these two amounts from the floating assets, and only £182,000 remained, but then sales of diamonds to the syndicate were presumably going on, and might be relied on to place the company in funds month by month, so that neither the payment of dividends nor the loan to the Explosives Company need embarrass it.

Under the stimulus given by the 70 per cent. dividend the deferred shares rose to 30, and prominent "insiders" took the opportunity to realise or to sell bears. One great house, whose members knew what was coming, poured the shares out in thousands and tens of thousands and must have been thus put in a position to rake in millions from the unfortunate speculative investor and from the heedless bull when the truth came out. It was all part of the war game of finance, by the rules of which the man or firm failing to use early knowledge for purposes of robbery is worse than a fool. But what was coming? The reduction of the Yankee consumption of diamonds the bears now answer, and publish statistics in proof. You will find them in the suitable columns of the *Financial News*. According to these the imports of diamonds by the United States rose to $2,673,878 worth last July, and were for the eight months of this year to the end of September $17,216,000 worth, against $16,101,000 worth in the same period of last year. By November the value imported had dropped to $592,708, as against $1,288,198 in November, 1906. Hence the inability of the De Beers Company to ven

ture on payment of any interim dividend on its deferred capital at the present time.

Most plausible this, is it not? But is it the whole truth? We do not think so. The United States has sins enough of its own to suffer for without being saddled with those of other people. Sales of diamonds have no doubt declined there as well as all the world over of late, and the new stones from the mine, like new copper, have had to compete with old and already marketed stones again and again thrown on the market to raise money. Not so long ago the Tsar himself parted with £100,000 of his capital in this form. But even with all adverse influences thrown in, De Beers need not have pulled up so suddenly had its position been as solid as its published returns would make people imagine. Our contention is, and has all along been, that its sales have never been all genuine. Early in its career it became the dependent of the diamond-buying syndicate, a secret association or co-partnery whose accounts have never been made public. It is understood to be composed principally of members of the board of the De Beers Company, and to it that company is compelled to sell all the diamonds produced. Other sources of the stones have also been brought under the control of the syndicate, its latest conquest being the Premier mine, so that it became a monopoly.

Having obtained a monopoly control of the diamond market the syndicate, many years ago, began to put up the prices of the stones to the consumer. This, if we mistake not, it did by several steps, and the more the stones multiplied the dearer they became. The invariable consequences followed; consumption fell off, in spite of the great expansion in wealth and its accompanying demi-mondainism; and the syndicate had to carry more and more of the diamonds it brought from the mines as best it could. In vain were agencies established by it to stock the shops of retailers the world over, the jewellers' windows and safes became ever fuller and fuller of unsold pebbles, and the credit demands of the syndicate and its distributing agencies grew ever more exigeant. At the present time it is not by any means extravagant to estimate the amount of credit involved in carrying the unsold and unsaleable stock of cut and other diamonds at from £30,000,000 to £40,000,000. It may be a little less than the smaller of these figures, and also it may exceed the larger. Until we have the accounts of the diamond buying syndicate and its dependent chain of agencies and banks our ignorance is complete, but if readers who have the time, knowledge, and opportunity will take a walk down Regent Street or Bond Street, and make a computation of the value of the diamonds displayed in the windows of shops there alone they will have a foundation for an estimate leading to disquieting inferences. What is it costing at the present time to carry this dead stock of diamonds? Are American bankers as deeply committed to this in all senses luxurious monopoly as those of Europe? Have any of our own banks made large advances on diamonds, and is the De Beers diamond buying syndicate compelled to bear the intolerable burden imposed by these credits?

If its members will answer frankly, we shall begin to know where we stand with the De Beers mine itself; if they keep silence we shall, as hitherto, wait quietly until coming events bring revelations. Suspension of dividends is but the overture to what promises to be a most instructive and interesting performance.

Some further items from the De Beers balance-sheet may be worth repeating here as material for reference. The total debenture debt of the company is now £3,590,895, redemptions to the amount of £265,750 having taken place during the year. Reserves aggregate £1,497,600, including £1,178,000 in Consols taken credit for at only £995,410. Creditors stand for £464,298, of which £181,331 is money borrowed, and the balance-sheet foots up at £12,340,428, but that does not include the £800,000 in debentures of the Klerksdorp Fourteen Streams Railway guaranteed by the De Beers Company, of which £600,000 have been issued, or a small guarantee of £29,000 under contracts. To get warrant for the balance sheet total the property of the company, a wasting one, is valued at £6,621,956 after allowing for redemptions and writings off to the amount of £217,865—a very slender provision for depreciation. Altogether £853,998 is sunk in the company's explosive works, £980,898 in equipment, &c., and £585,638 in blue ground on the floors. Bearing in mind the origin of De Beers and the frauds committed on Waterboer through which the territory of Kimberley became Cape Colony land capable of being utilised to create a deadly monopoly in many things besides diamonds throughout that region, the growl against the 10 per cent. Cape tax on profits contained in the report will command little sympathy except from De Beers shareholders, and they have now something more important to wrestle with.

The Shadows of Coming Changes in China.

Great changes are impending in the Chinese Empire. What they portend to the European trader cannot yet be guessed, but the Chinese are more and more assuming an attitude of independence, and the maxim "China for the Chinese" promises to bring about developments in native industries as well as an attitude towards the foreign trader, whose consequences it might be well to try to begin to estimate. The report of Sir Alexander Hosie, Acting Commercial Attaché to His Majesty's Legation at Peking, on the trade of China for 1906 excites many thoughts, and stirs not a few questions well worth working at if difficult of solution. It is not that Sir Alexander dwells upon political aspects of affairs; he concerns himself, on the contrary, altogether with commerce and material developments, but it is impossible to deal with these and not take cognizance of many facts or symptoms illustrative of an altered temper among the people. That it will be a long time before China is able to stand alone may be true, and that as China is opened up by railways, opportunities with the interior of the country may be increased to the foreign merchant may also be true. None the less is the present Government of China, imperial and provincial, bent upon asserting the self-sufficing independence of the country in a manner hitherto unknown.

Before dealing with some incidents illustrating this temper, a word may be said about Chinese foreign trade, which appears to be, superficially at least, surrounded with difficulties. Were the statistics of imports and exports complete we might, indeed, say that China must be on the verge of an economic crisis, like so many other parts of the world. The statistics, however, are partial and incomplete, so that we only know with an approach to accuracy that part of the country's business which passes through the hands or under the eyes of the Imperial Maritime Customs service. The latest official returns show that in 1906 the foreign trade was larger than in 1905 by £4,911,000, and that most of this increase took place in export values. It remains the fact, however, that imports as tabulated by the Customs service are always larger than exports. Last year, for instance, the value of the imports is given at £67,523,618, while that of the exports, although £4,639,000 more than in 1905, was only £38,917,000. In 1905 exports were equal to 50 per cent. of the imports, and in 1906 to 57.6 per cent. For a country so deeply indebted as China to foreign creditors, this excess of imports looks more than perilous, and, making all allowance for the unseen channels through which exports may flow, as well as for the false valuations of exporters and the fact that import values are diverted by transit charges, the great excess of imports undoubtedly helps to account for the monetary troubles which afflict China, for the decrease in the value of the silver tael of whatever denomination. China in this respect appears to be in a worse position than British India, and its enterprises are accordingly more dependent upon the help of foreign capital than they should be. The inflow of that capital for mining enterprises, for the establishment of manu-

facturing industries, or for the building of railways and ships, eases the pressure of the foreign debt, but does not bring the country into a healthy economic state. To get speedily into that happy position the total value of the exports ought on the average to exceed that of the imports by at least twice the amount of the foreign debt charges, which are always increasing under one guise or another. Even this excess would not be sufficient to pay for freight and insurance paid to foreign shipowners and insurance companies.

Meanwhile, the utmost confusion exists in the Chinese coinage, and, as Sir Alexander Hosie points out, what is wanted is the establishment of a fixed relationship between various coins, old and new, now jostling each other and creating a state of things that now and then approaches paralysis. Nothing, however, of a uniform silver standard has yet been devised. "The foreign exchange," he adds, "is but one factor in the trade of the empire. The tael one speaks about so glibly is not a coin, nor is it uniform in weight, touch, or value, and in carrying on trade between one end of China and the other as many as ten different exchange transactions may have to be effected." This confusion must increase the difficulty of the Central Government in finding the money to meet the charges upon its foreign debt or for the improvements and changes the new spirit demands. It may also do not a little to stimulate the great satraps around the throne to get quit of the foreigner by other means than those employed by the Boxers. We have always said that China has been abominably used on more than one critical occasion by the European Powers, and most of all in the financial burdens placed upon her people after the Boxer rising. Every year for many years to come the Peking Government alone, on one account or another, has to transmit more than £5,000,000 sterling to the foreign creditors, and for the greater part of this money the people get no equivalent of any kind. They are drained by means of their confused and debased currency to an extent much beyond the normal equivalent in money, and their wonderful industry is hampered at all points by the resulting poverty.

For all that the trade of China is a growing one, and as the resources of the country are practically infinite, it should continue to grow much faster than it ever has done. The country only requires to be opened up by railways and to be endowed with a stable and genuine currency that might ease the strain of debts, and it should forge ahead in a manner calculated to startle us all. In the last two or three years, however, there seems to have been considerable overtrading by the cotton merchants. Miscalculations regarding the effect of the reopening of Manchuria after the war led to excessive consignments of Lancashire goods which have not been sold with the hoped for readiness, partly because the country has not yet settled down, but also because the competition of Japan is becoming more strenuous every month. Famines in many parts of the empire, the depreciation of silver, and appreciation of copper money as against gold have also helped to weaken consumers, and the consequence is that our merchants in the East are carrying heavy stocks of cotton piece goods and finding no small difficulty in doing so. Shanghai is even said to be losing its hold over the trade of the north, and when business is again on a rational and fair footing in Manchuria it will not be from Shanghai that the supplies will come. Tientsin seems to be replacing it. On the other hand, as the Central Provinces of China are opened up to traffic, there ought to be ample compensation for the port on the Whampoa. That opening up, however, is not going to come in an effective and durable fashion until railways penetrate into the great provinces of the West. Is France going to be in the Sou-Chuan market before us through Yunnan?

Already the battle over railways is beginning to wax hot in China between foreigner and native, and the Chinese people appear to be growing more and more resolute in their determination to manage the business in their own way. They are not only preparing to build and equip railways with their own money, but they are erecting ironworks and other factories which will be managed by natives. As Sir Alexander Hosie says, there are numerous foreign and Chinese engineering and ironworks in Shanghai, several of which he visited, and found new machines such as oil mills being turned out for other ports in China of apparently as good a quality as the British-made machine, and at one-third the price. The Chinese are learning to be mechanics and engineers, and rapidly turning their new acquirements to practical account in mining and road-making, bridge-building and gun-casting. They have long been weavers, as is proved by the enormous absorption of foreign spun cotton yarns by the country. The railway running northwards from Canton towards the Yang-tsze Valley is being in part, at least, built by native capital, and whatever money may be supplied by the foreigner will more and more have to take the form of loans, guaranteed either by the provincial or local governments. There is less and less disposition to permit foreign corporations to work concessions in China wholly for their profit and regardless of native interests.

Some holders of earlier concessions, however, are making considerable headway in the development of territories or particular industries conceded to them in spite of difficulties thrust in their way, and the progress of the mines possessed by the Chinese Engineering and Mining Company has been, on the whole, satisfactory. The Pekin Syndicate is also making some headway, although not nearly to the same extent, but it may be taken as certain that the enterprises now being opened up by these and other corporations will become exclusively Chinese in time. The foreign capital sunk will be honourably paid back, and we shall have notice to quit.

As illustrating the change which, to a large extent unconsciously, has come over the attitude of the people at large towards European inventions, Sir Alexander Hosie describes the ceremony which took place at the turning of the first sod of the Hu-Chia or Shanghai-Kashing Railway. The ceremony was performed outside the great South Gate of the native city of Shanghai, and a reception place was put up to receive the guests invited to witness the digging of the first sod. At half-past two o'clock the head director of the company struck the first spade into the ground, and his Excellency Lü Hi-huan, the Chinese Treaty Commissioner, completed the operation by lifting the first piece of turf. He was the highest official present, and accordingly to him this ceremonial duty was assigned. When the sod had been duly turned the guests marched back to the reception hall, where refreshments awaited them. Then followed speeches by various great native functionaries, the first being read by Taotai Li on behalf of the Nanking Viceroy. It is unnecessary to go over the names, but the winding-up speech was by the former Commissioner of Frontier Defence in Kuangsi, who spoke on behalf of the gentry and merchants of Shanghai, and congratulated the company on the energy and patriotism shown by them in undertaking such a great venture as that of constructing railway lines over the whole province of Kiangsu- hence the name of the company, the Kiangsu Province Railway Company. Then a reply was read on behalf of the chief and the vice-director of the company, and the usual complimentary winding up followed, all quite in the European manner, and interesting as a glimpse of the readiness of the Chinese to adopt the social habits and customs of Europe in matters joint-stock. This also foreshadows the changes in progress in directions where change counts.

Industrial Insurance.

Little or no attention is paid by the public at large to the wonderful development of this form of insurance business during the present generation. The growth affords an interesting proof of the eagerness existing

amongst the working classes to make some provision against unforeseeable calamities, or at any rate to lay by enough to ensure themselves decent burial. "Industrial insurance," however, as this kind of business is called, has other aspects which are not quite so pleasant to dwell upon, and one or two of its characteristics deserve some analysis. We have accordingly entered into a comparison between the position of the companies doing what is called industrial business in insurance, contrasting 1905, the latest year for which we have official figures, with 1880. The comparison is suggestive upon many grounds, but in order to clear the way it is advisable to illustrate the subject by some figures from the accounts of one company alone—the premier company in this line of business, viz., the Prudential. We get the figures from the official Blue-book issued by the Board of Trade and a comparison of these two years in the case of the Prudential is a most eloquent testimony, not only to the remarkable skill and energy with which its business has been managed and developed, but to the exceptional profitableness of that business.

Let us recite the figures in proof. In 1880 the total of the life and annuity funds in the industrial branch of the Prudential was only £1,477,000. At the end of 1905 it had risen to £30,947,000. The company had no reserves at all in this branch at the earlier date nor any sum at the credit of profit and loss, but at the later the reserves amounted to £1,802,488 while the profit and loss showed a credit balance of £5,557 after meeting all charges including the dividends. These figures are striking enough, and are emphasised still further by those that follow. Capital in 1880 was under £25,000 paid up, in 1905 it was £1,000,000, and the whole of the addition thus shown has, we believe, been paid up out of the profits as well as most of the amount shown at the earlier date. An increase of £22,656,000 has taken place in the life funds of the company which at the earlier date were only £1,318,000. Quite as striking are the figures relating to the company's assets. It had less than £73,000 in mortgages in 1880 against £1,916,000 in 1905. The money advanced against the security of rates was barely £167,000 at the earlier date, and was £9,879,404 at the later. The value of British Government stock held was £144,000 in 1880 and £1,932,000 in 1905. It had no Colonial securities, no Foreign Government bonds and no shares in other companies in 1880, and its investments in debentures amounted to less than £48,000. At the later date it held £279,000 of Indian and Colonial Government securities, £229,426 in Foreign Government stocks, £3,263,000 in debentures and £1,066,429 in shares. Its investments in freehold ground rents were £3,860,399 and in house property, mostly freehold, £3,685,329, or altogether £7,546,000. There was a contingency fund in 1880 of £40,000, but nothing of that kind is required now.

These figures, it is thus seen, exhibit remarkable progress, which has naturally excited the envy and emulation of rivals. Accordingly many other companies have entered into competition with the Prudential for this industrial business, but none of them have attained to a magnitude in any degree rivalling its magnificence, and it now stands at an unassailable advantage against all others by reason of its great wealth. The cost of conducting its business amounts to a smaller ratio of the premium income than any other company is able to reveal. This cost was in 1905 less than 40 per cent., and none of the other industrial companies come near that figure. Even 40 per cent. looks high, and is high, would be intolerable in the case of ordinary life insurance, would mean ruin, in fact, to an "ordinary" life office; but there is this excuse for such a figure that the working classes cannot be trusted to look after the payment of premiums in the way the better educated or better endowed salaried classes do. They generally make their payments weekly, so much off the weekly wage, as being the best and indeed with many the only way in which a few pence can be put by for any purpose. This involves house to house collection and the employment of a great army of agents who have to live by the business they do, hence expenses cannot fail to be high, and the smaller or newer the company as a rule the higher the ratio. Thanks to its enormous wealth the Prudential is able to maintain its great army of agents and still to keep the expense ratio below 40 per cent. of the premium income. It tends, indeed, to diminish. This, however, leads to the inference that, however valuable, the benefits secured to the insured are so small as to admit of large profits on the scale of premiums charged, and naturally the conclusion must be that the loading put upon these premiums for expenses is in many cases excessive, and tends to remain so even when the office grows to be prosperous.

Let us now go through the other companies doing industrial business and note what their scales of charges are. The Britannic worked its business in 1905 at an expense ratio of 43.22 per cent., the Abstainers and General at 47.60 per cent., the London and Manchester Industrial at 50.72 per cent., the Pioneer at 76.50 per cent., including the amount set aside for establishment expenses; deducting that, the ratio for the Pioneer is brought down to 52.28 per cent. The Pearl spent 45.89 per cent. of its premium income in expenses, the Refuge over 49 per cent., the Wesleyan and General 47.20 per cent., the Citizens' 47.77 per cent., the London, Edinburgh and Glasgow 44.52 per cent.—or if the loading taken into the profit and distributed is added, 48.47 per cent. The British Natural Premium Industrial Life and Sick Benefit Company swept away 69.69 per cent. of its premium income, the British Legal, including extension expenses, absorbed 48.48 per cent., the Salvation Army 55.07 per cent. and the United Provident 68.42 per cent.

This is a dry recital, but well worth consideration. Obviously, there is no benevolence whatever in this kind of business, and in the case of not a few companies there must be a very cruel loss inflicted upon those who take out their policies. Even the Salvation Army's industrial insurance department, it will be noticed, contrived to spend in working expenses upwards of 55 per cent. of the premiums received, and we should very much like to hear what Mr. Booth's explanation is of this fact. Amongst all the offices whose accounts we have looked at, the British Natural Premium, the United Provident and the Pioneer alone outshine the Salvation Army in their ratio of expenses to premium income. Broadly speaking, however, it may be said that from one-half to five-eighths of every penny paid by the client or customer, the policyholder, goes away in expenses, and when that is the case it must prove extremely difficult to accumulate anything like an adequate reserve fund against liabilities. So far are some of these offices from having a reserve fund that they are actually in debt. They have had to borrow money in order to establish the business. So profitable, however, has that business, as now conducted, proved to be that time and energy in pushing may enable an office, which by all ordinary rules ought to be treated as either insolvent or unworthy of confidence, to live on and even to expand, to accumulate funds also in a modest way.

With most of the offices, however, it is rather a dreary business for all except those who divide the bulk of the money devoted to expenses, and some of them seem to us to have difficulty in maintaining themselves against the competition of more formidable rivals. The British Natural Premium office, for instance, has amongst its assets £182,290, money laid out on establishment expenses, and as its paid-up capital is only £196,486 its business will either have to improve soon or more capital will have to be found for it, if it is to go on at all. In fact, more than the entire available capital has already been spent, if we add to the establishment expenses £31,233 credited to the guarantee fund expenses and replaced principally by preference shares, together with £2,429 due

to directors, all of which are taken as assets. In contrast to this concern, which conducts most of its business on what we consider to be a thoroughly unreliable basis, the London, Edinburgh, and Glasgow Insurance Company has pulled itself forward in a way we never expected to see. It is doing an increasing business, and had on December 31, 1905, managed to accumulate funds on various counts aggregating £742,000. It still had a debenture debt in 4½ per cent. bonds amounting to £99,650, and the sooner that is wiped off the better. The New Era Company, a small concern, had at the same date a debenture debt of £12,255, and the Pioneer Company owed £8,489 to secured creditors, while the United Provident Assurance Company had a debt of £17,950 on debentures together with £3,853 due as directors' fees not drawn. These are samples of the kind of thing that is to be found amongst some of the more obscure companies professing to do life insurance business, and they give food for reflection.

Economic and Financial Notes.

Peruvian Corporation.

Profit for the year ended June 30 last is brought out at £256,346, which is £12,652 less than that of the previous year. This result is arrived at after paying the reduced interest of 4 per cent. upon the debentures. A rather smaller balance of £165,698 was brought forward, making the entire free revenue £422,044, which is £13,000 down on the comparison of years. From this £4,710 is set aside on colonisation account, £4,000 to the insurance fund on lake steamers, and £26,872 written off in respect of claims against the Government of Peru abandoned, so that the final balance is £386,462, out of which the directors set aside £50,000 to the reserve, raising it to £525,000, most of which is of necessity sunk in the various undertakings of the corporation. Then the extra 2 per cent. is paid upon the debentures in accordance with the resolution of March 12, 1896, and, that done, the directors again pay a 30s. per cent. on the preference stock, leaving £150,769 to be carried forward, or almost £15,000 less than was brought in. On the two years, in fact, the decrease in the balance is about £16,000 and £25,000 less was carried to reserve this year than last. This does not seem to us to be prudent finance in present circumstances. It will not improve the credit of the corporation, which needs to be strong in order to raise more money. The pressure of various undertakings and contracts compels it to spend, and the delapidated state of many of the railways under its control also requires further outlays. Witness the condition of the Southern and Central Railway systems, many of whose bridges are quite inadequate to bearing the weight of the traffic now put upon them. The directors employed an expert from the United States, who after carefully inspecting the bridges said that two large viaducts on the Southern system and 14 bridges of various descriptions on the Central system would require to be renewed, while 40 to 50 bridges must be strengthened. One of the viaducts is to be turned by diverting the line, but the estimated cost of these repairs is £150,000, and new rolling stock is continually demanded on all the lines, so that the Corporation is always in urgent want of money. This year it has raised £600,000 through a syndicate headed by Messrs. Speyer Bros. on twelve months' 6 per cent. notes at par, of which all but £100,000 has been called up.

Beyond this the new contract with the Peruvian Government, which is of a give and take description, but especially of a give, with other demands will require another £000,000, so that altogether the Corporation must in the coming year provide for raising £1,500,000. We venture to think it would have been in a position to do this with greater assurance of success if it had husbanded its resources. There was never any urgent necessity to pay more than 4 per cent. upon the debentures after the arrangement made whereby the charge they involved was provisionally reduced to this figure, and the holders of the preference stock had gone on for so many years getting nothing but what they could make by play upon the Stock Exchange that they might have been left out in the cold a few years longer without serious detriment. The money thus saved would have enabled the Corporation to execute many works now in abeyance or starved, and more urgently demanded with each month that passes; so that if it had been compelled by and by to come into the market it could have shown substantial assets as security, whereas almost every asset it possesses is now demanding money. None of the railways did well last year, because expenses went up or revenue fell off, or because both influences were at work concurrently, and the entire nett income shown by them was only £237,146, but this is arrived at only after charging to capital account the difference between the cost of new rolling stock acquired and the old put out of use. That is short-sighted economy, and if the corporation had frankly spent all, or nearly all, the revenues of every one of these railways in improving their physical condition and bringing them up to date, there might have been a reassuring prospect for its stockholders in the near future. As it is, it will continue to enjoy a precarious existence with ups and downs, but without much substantial progress. That seems to be the lesson inculcated by the statements in the report, the new agreement between the Corporation and the Peruvian Government and the balance-sheet, which makes a grand display of £21,000,000, mostly composed of assets but feebly remunerative. More guano, however, was sold last year by 26,884 tons, but the quality was low and the price therefore poor, while freights were 1s. 8d. per ton higher than in the previous year on the average. Therefore, the nett income was only £8,055 better at £186,280. Progress is made, and Peru must have a great future before it some day, but the Corporation has not hitherto done so much as it might to ensure that future for itself.

The report contains a translation of the latest contract between the Government and the Corporation, which is not in all respects what might have been wished for, but still, in the circumstances, probably as good an arrangement as could be reached. The Peruvian Government gets a good many concessions, debts wiped off, and so on, but it also undertakes to pay 30 annuities of £80,000 each, beginning from July 1 last, and has assigned the sugar tax as security for this payment, making the provision also to supplement any shortage in that direction out of its other revenues. So far instalments have been regularly paid. In return the Corporation is to pay £12,000 per annum in taxes for ten years from July 1 last, £15,000 per annum during the succeeding ten years, and £20,000 per annum during the third ten. Furthermore the 66 years of the lease, as it were, granted on January 11, 1890, is to be extended for 17 years, and will expire, therefore, in 1973 instead of 1956, but during this extended period the Peruvian Government is to be entitled to receive 50 per cent. of the nett receipts from the railways and their extensions after the service of the debentures of the Corporation up to the amount of £6,000,000 has been provided for. During that period also the Government will have the right to nominate one of the directors on the board of the Corporation. We hope by the time the first of these 17 years arrives the revenues of the railways will be so splendid as to prevent stockholders from suffering by this stipulation. Meanwhile, the Corporation has undertaken to spend capital in building 300 kilometres of railway extensions, and to do various other money-eating deeds which may cause it a little inconvenience in the immediate future.

The Economic Condition of Canada.

A confident assurance that all is well with Canada has been issued by the British Empire Trust Co., Limited, whose interests are bound up with a number of Canadian enterprises. Great stress is laid in the essay, which accompanies the summaries of figures relating to the various companies to which the lay-

tunes of the Trust are committed, on the fact that no crisis has as yet broken out in Canada. On the one side of the imaginary line all is financial and industrial chaos, while on the other reigns peace and progress; the inference drawn being that Canada enjoys better government than the States, "economically and politically." We are quite willing to believe this, and many of the statements very ably put forward in defence of Canadian credit stability are weighty, cogent enough; but it is true, nevertheless, that the trying time for the Dominion has not yet come. Incidentally, as it were, the exhibit made in the pamphlet issued by the board of the British Empire Trust Company indicates the probable course of events. Canada has been living on borrowed capital—capital, whether bond or share, obtained mostly in Europe, not merely for the sustenance of the land boom in the West, but for its many enterprises at home and abroad. The figures we quoted last week from Sir George Drummond's speech indicate emphatically what has been going on, and Canada still wants money. Some of the enterprises mentioned in this pamphlet indicate prospective demands for capital of an indefinite magnitude, and as long as capital can be obtained abroad in the requisite amount there is no inevitableness in a crisis. It is only when the inflow of capital to carry out new enterprises or sustain those already brought into existence by the help of capital previously borrowed or raised anyhow abroad, stops that the trouble begins.

The condition of our own Money market should warn all those engaged in developing Canada or in sustaining and expanding the many enterprises at home and abroad in which Scotch and other Canadian citizens are interested, to cut down their requirements for the next year or two to the lowest possible limit. If this is not done, then the Canadian crisis which now looms ahead may well be worse than that of the United States. Amongst other statements made by the writer of the introduction to the summary of accounts relating to the various companies of the British Empire Trust is one to the effect that the farmers of the North-West will realise about £800,000 more by this year's harvest than last. This is not given as the estimate of the Trust's directors, but of "one authority," and we should really like to know what foundation there is for putting forward a figure of this magnitude. As far as we can hear or ascertain through trustworthy sources —and we have no prejudice at all in the matter— this year's harvest in the Canadian North-West is, so far as milling qualities go, an almost total blank, and this seems partly supported by what we read in the paper before us to the effect that the crop was four weeks late. Does not that statement bear out the reports that reach us privately, and is it not true that the land bought with such avidity by the immigrants is not yet paid for? This Trust company is interested in a Canadian Northern Prairie Lands Co., Limited, which has sold land up to date for $2,402,512, this price showing a profit of $1,365,643, but of the price obtained $1,906,128 remained unpaid at the date of the balance-sheet bearing 6 per cent. interest. That may not matter to the company, but supposing hard times continue and the buyers are not able to pay their remaining instalments, will not that put an end for the time being to further exhibits of profits? That there are excellent enterprises among those of the British Empire Trust is not to be gainsaid. In time they may all do well, and we have always looked with a favourable eye upon the British Columbia Electric Railway Company, upon the Shawinigan Water Power Company, and even on the various electric enterprises in Brazil; but they all want more money, the Canadian Northern Railway not least. They are devourers of capital, and we here will not have the means to supply their wants for many a month to come. This, after all, is why we have fears for the immediate future of Canadian finance. Supposing the supply of British, of European capital to be stopped for a time or materially curtailed, how are these new enterprises to stand up to the obligations to which they are already committed? The debt of the Canada Northern Railway alone has risen by about £6,500,000 in three years.

Mr. Holden on the Depreciation of Securities in Relation to Gold.

As an exposition of the machinery of banking business, the lecture delivered by Mr. E. H. Holden, M.P., managing director of the London City and Midland Bank, to the Liverpool and District Banks Institution on the 18th inst. is admirably clear and instructive. We have never seen the intimate relation between the granting of credit in any form and deposits more lucidly set forth. Also the play of market upon market in the matter of commercial demands, the constant use of credit in all the stages of mercantile intercourse and the necessities American bankers lie under to finance the imports of the Republic between harvests, are all points well brought out. So is the relation between Stock Exchange prices and credit, especially between high and low rates for money and the corresponding movements of quotations on the Stock Exchange. In a word, the essay and its accompanying diagrams are full of instruction, and the only point we are a little shy of is the conclusion. Mr. Holden has long been a zealous and consistent advocate of larger gold reserves, and he thinks we should attain, in part at least, this excellent reform were the Government compelled to pay off its debt to the Bank of England in gold. We have no objection at all to that, provided the Government can ever get enough surplus to enable it to spare the money with which the gold could be acquired. At present, however, there is no probability of any such wealth coming into its possession. It has an army to create and maintain and many *Dreadnoughts* to build. Deficits, therefore, are what we shall presently be compelled to wrestle with, not surpluses out of which gold could be bought. But our banking system, or rather perhaps our bank credit circulation, is so little dependent upon bank notes and so much a matter of the credit of individuals with separate banks, that we cannot feel confident of any great accession of strength to our Money market by a change of this kind. It is for the individual banks to protect themselves and their customers, and probably the wisest words said by Mr. Holden in the whole course of his valuable and interesting essay are to be found in the concluding paragraph. In this he suggests that the Board of Trade should ask all bankers to supply them with balance-sheets showing the amount of specie, Bank of England notes, balances with other banks and balances at the Bank of England which compose their reserves, and that these returns should be issued for public instruction. We agree in thinking that if this demand was resolutely enforced "gold reserves would be slightly but effectively increased." But has the Board of Trade any power to call for a valuable return of this kind?

Westinghouse Methods and a Moral.

A well-informed correspondent obliges us with the following pungent criticism of the British Westinghouse Company, and offers some shrewd advice:—

"Your remarks in this week's number anent the Westinghouse Company seem to me to call for some further comment.

"Much has been said about the apathy of the British shareholder, but really for long-suffering resignation the British shareholders of the Westinghouse Company seem to me to 'take the biscuit.' I have never heard even a mild growl on their behalf, and for years past when the only great and good George Westinghouse used to serve up to them the usual annual 'hogwash' about the 'promise of next year' (a recipe for this mixture ought to figure prominently amongst the £1,180,000 worth of patents), these same shareholders—quite correctly described as 'preferred,' for who would not prefer them?—seemed to go home quite contentedly. Then came a year in which the great George Westinghouse coolly told them that in

future he would not have the time to come to Europe, and to anybody accustomed to Yankee proceedings that was quite sufficient to show what was coming.

"The English company was started in 1899, and seems altogether to have had about £3,000,000 or so of our money, all of which probably is lost? Even the much-depreciated debentures seem to me in jeopardy, and the proposed 'prior lien' debentures ominous. I warned friends of mine in the North years ago against investing money in these works, for it was an absurdity to start works with 5,000 workmen; but I was laughed to scorn for my ignorance, and now *Où sont les neiges d'Antan?*

"The company seems to have steadily lost money at the rate of £400,000 per annum, and that in a new and most promising industry which has been effectually spoiled by it for all the other firms for years to come, because customers have been allowed to put forward claims and conditions which are absolutely ludicrous, and thousands of workmen who could have found regular and profitable employment have been kept out of it. Ask the other English electrical works what this competition has done for them. You say the American patents of £1,180,000 stand probably too high. I say strike off four noughts, reducing this gigantic sum to £118, and ask their competitors if they will take them at that figure? In the same number of your paper you mention the Allgemeine Elektricitäts Gesellschaft; just let its figures be compared to those of the American company, though I will not hold them up as a model. I believe the Allgemeine only started about 20 years or so ago with four workmen, and now it employs about 30,000. The company has paid regular dividends of 10 and 12 per cent., and, as you rightly say, is in a very strong position, and though it holds some really good patents, these figure in the balance-sheet as worth one mark—a valuable contrast. Consequently, it can beat English competitors when it comes to financing and taking big orders, as the English works, owing to excessive capitalisation, never had the chance of doing well. You add that it would be cruel to describe the state of the American company as 'hopelessly insolvent.'

"It seems to me that is a very kind way of putting things—much too kind and mild an expression for such a disgraceful exhibition.

"What I never could understand is why intelligent business people like some of the British electrical manufacturers allow these Yankees to have it all their own way, knowing how the Westinghouse people have treated their customers in this country, where they have all the world's competition to contend with. What must it be in the United States where they have practically none? Why, therefore, should not British firms open an office or even works in the United States, and serve American customers well and on sound British lines? I should say hundreds of American consumers having suffered for years from the tyranny of the monopolists would welcome the newcomer with open arms. If that is too big an undertaking for a single firm, why not join forces for such a good fight instead of taking this unfair competition 'lying down'?

"And that brings me to another consideration. During a business experience of, alas! getting on for 40 years, it has been my good, or bad, fortune to come across American firms in many branches of trade. I can safely say that, with one solitary exception, I have never been fairly dealt with by any of them, and had I trusted my American friends (whom I willingly allow to be marvellously clever, plausible, ingenious and—shall I say?—the finest suppliers of fiction the world has ever seen), I should have been 'on the rates' long before this. All my friends and business acquaintances tell me their experience is the same, but I have never seen such a thing even hinted at in the Press, and I should like to know what your readers' experience in that respect has been. If one only had the satisfaction (really, to me it would be a satisfaction) that at least the Yankees themselves benefited by all this 'besting' and 'having'; but it seems to me that, with all their cleverness, ingenuity and push, not to say unscrupulousness, the Americans are the worst business people in the world, and all their manœuvres lead to nothing, otherwise we should not see such contemptible exhibitions as this American electric company's balance-sheet, not to speak of dozens of others ushered in with a wonderful flourish of trumpets. Here we see these Americans fighting and working and straining like lunatics, and sacrificing their lives and immortal souls in pursuit of wealth; and even in a new industry like the electrical one this is the outcome of all their scheming and wastage of human material! Surely it is time that somebody said something for the slow but sure British method, under which, at all events, in every branch of trade solid fortunes have been built up and large factories kept going; and it seems to me it would be wise to cultivate a little British or, better still, European pride as opposed to Yankee humbug."

Ashanti Lands.

It was scarcely playing the game to fling a report like the one just issued by this terrible failure at the heads of shareholders two days before Christmas. A couple of days after would have been bad enough, and we can imagine a wholesale curtailment of seasonable outlays, and no Christmas cards for the directors from grateful shareholders. The company's chief interests are in the Attasi Mines (1905) and Railway and the Akrokerri (Ashanti) Mines, and when you have noted what the directors say about each, the stupendous losses to be faced will hardly come as a surprise. When the directors hazarded a report about a year ago, the Attasi property had just been equipped with a 50-stamp battery, successful preliminary crushing trials had been carried out, and things looked like going along swimmingly. But there was a terrible disappointment in store, and the ore proved to be so persistently poor that the company was not only unable to pay its way, but could not pay its debts. In fact, things went so far wrong that the position of the debenture-holders (the company is the largest) was actually threatened, and as a defensive measure a receiver and manager was put in under order of the Court. Hoping against hope that something might be done to retrieve the position the Lands Company has advanced the receiver £4,600, and the directors, summing up the position, remark that "it is satisfactory to be able to record that the steps taken in defence of this company's large interests have been justified as by the working of the property on a moderate scale it has been demonstrated that a small profit can be made even on the low grade of ore treated, and it is hoped that it may be possible to evolve a scheme for taking over this property and continuing its working on the present lines in order to obtain some return on the large amount of money invested in it." So much for Attasi and the situation in regard to the Akrokerri (Ashanti) Mines is very little better. As suggested a year ago, the plant was doubled with the idea of securing an increased output for the "normal monthly expenditure," by which it was anticipated that a proportionately larger profit would be made. But as soon as the stamps were up an acute shortage of native labour ensued, and the additional plant was inoperative for some months. This and the lower grade of ore that became available for treatment actually resulted in a smaller monthly output than formerly, and the price of the shares is now something like 3s. 6d. Lately the labour supply has been better, and last month's output (November), although still considerably short of the full capacity of the mill, was the largest yet treated. As in the case of the Attasi Mines, the directors are hoping for something better in the future, and while the shareholders are waiting for something to turn up to retrieve the company's fortunes, they can study the present position as disclosed in the balance-sheet. It is a ghastly display. The company's revenue in the twelve months to June 30 was £13 7s. 0d., and the cost of administration, including the directors' fees—how much?—was £1,087. Interest and commission took another £272, and then we come to an entry that

is enough to make the hair stand on end. It is "depreciation on investments £94,507," and the aggregate deficiency for the year is thus £96,752. Add it to the debt existing at June 30, 1906, and the loss to date is £133,311 or roughly 87 per cent. of the capital, and premium on shares issued appears at £250. The pity of it. Investments, at present market value, appear at £19,377, and the creditor in respect of that loan against security £10,000 must be getting a bit fidgety. The Odumassi property had £39 spent on it during the period under review, but there has been no change in the property "as the conditions of transport remain the same, and the general financial conditions prevailing have rendered it impossible to take any steps for dealing with this property. The company owes £2,122 to sundry creditors, and can only gather up £972 from debtors or in cash, and it looks as though the directors will not get their fees for the current year. But we can give them a word of praise. They have put the position squarely, and do not keep the investments in the books at a fictitious valuation on the plea that current prices do not represent the true value of the shares. Frequently they do not, but hardly in the way that some directors mean.

American Business Notes.

A further improvement took place last week in the averages of the New York Associated Banks. Loans dropped back by £1,916,400 and deposits by £1,474,400. Against these decreases there was an increase of almost £868,000 in the specie held and of £434,000 in the greenbacks, so that the cash and paper money reserve was actually up about £1,302,000 and the deficit, thanks to this increase and the reduction in the liabilities on deposits, was lessened by £1,670,000. It now amounts to little more than £6,350,000. It is still, however, large enough to prevent the banks from resuming straightforward payments of their liabilities, and the improved position is said to be due, amongst other things, to the cash returned by the Government representing subscriptions to its recent inflation loans. Some of the hoardings are also given back to the banks, either directly or indirectly, and several of the trusts are said to have redeemed some of their loans, which is also possible if their debtors have been able to redeem the securities pledged.

Gold continues to be bought abroad, but it mostly vanishes into the interior. The anticipation of market students on Wall Street in the end of last week was that the banks would have gained about £1,500,000 through the week's imports of the metal, and they actually gained less than £900,000, the rest having been sucked away into the interior. That all is not well there is demonstrated not only by the dread of the market that we shall have to chronicle industrial and trading failures early in the coming year, but by the actual suspensions now taking place. In the beginning of this week, for instance, two banks have had to close their doors, one the rather important State National Bank of New Orleans, whose deposit liabilities are stated at £1,250,000. The other is the Neal Banking Company of Atlanta, Georgia, a State bank whose resources seem to be engaged too deeply in Cuba and Alabama properties showing a depreciation likely to affect the company's solvency. That is a nice, delicate way of putting it, and as the local Clearing House committee refused to render any assistance the bank had to be taken charge of by the State authorities. Its deposits, however, only amount to about £200,000. Next day came the news that receivers had taken charge of the Memphis Savings Bank, whose deposits are given at £400,000. Industrial failures are also occurring daily, one may say, although they are not always reported here. A small Pittsburg company called the National Glass Company shut up in the end of last week. Its outstanding capital is put at about £560,000.

Some curious and instructive information is gradually coming to the surface with reference to suspensions already made. Details are still hidden about the trust companies that have become comatose or dormant, but they are doubtless struggling hard to extricate their assets or liquify them. An effort is to be made to set the Knickerbocker Trust on its feet again, and as a help towards this the shareholders have voted an increase of £160,000 in its capital, bringing the total up to £400,000. At present is has £240,000, and on the top of this very small foundation a deposit liability of £9,300,000 has been piled. There is, however, a "surplus" item of £974,000, but even with this the credit structure looks of a sky-scraping order. On December 9, however, the receivers of the trust had managed to gather in cash of some sort or another, in hand or in the bank, to the amount of £806,450. Loans outstanding at that date were £7,098,000, the bonds and mortgages held £635,000, and the investments at cost amounted to £1,542,000, the real estate possessed by the trust figuring for £434,000. No particular inference can be drawn from these items, which are simply put down here for purposes of future reference, and the only remark to be made is that the proposed increase in the share capital seems to be quite inadequate to give sufficient stimulus to a tied up concern like this, not enough to permit it to resume business on the old lines.

The Otto Heinze group of companies are also to be resuscitated, or, at least, their creditors are to get payment of a sort. A new company is to be formed with the nice name of the Western Development Company, and it is to issue preferred stock to the amount of $16,000,000, or £3,200,000, which will represent the firm's debts. Each creditor will receive preferred stock to the full amount of his claim, and will cancel his claim against this paper. Also creditors holding security will execute to the new company an option for the purchase of this at the face value of the original claim with interest at 6 per cent., less dividends received on the preferred stock. Creditors will further undertake to surrender this preferred stock to the company when the claim is paid off, but in addition to the par value of his claim in this stock each creditor is to have 50 per cent. by way of bonus in the common stock, the other 50 per cent. going to the members of the debtor firm, the half given to the creditors to remain their absolute property. Amongst the securities which it is proposed to turn over to this interesting liquidation company are 2,815 shares of the Chase National Bank, $335,000 of Consolidated Steamship bonds, 139,249 common shares in the United Copper Company and 34,870 preferred shares in that company. There are also a lot of minor possessions, such as 615 shares of the Mercantile National Bank, 500 shares of the National Bank of North America, 335 shares in the Empire Trust Company, 668 shares in the Italian-American Trust Company, 200 shares in the Inter-Borough Bank, 150 shares in the Carnegie Trust Company, 250 Savings Bank shares and 4,000 shares in American iron adventures, altogether as nice a little lot as could well be gathered together. And of cash there is none.

Mr. Thomas F. Ryan is said to have got a bigger hold than ever over the Fifth Avenue Trust Company, some portion of whose shares have been sold by the Mutual Life and the Equitable Life Assurance Companies of the United States. Some of the shares, however, have gone to other trusts, and these flimsy institutions may be expected to help each other as far as they can by preventing any actual slump in the market. How these trusts are built up, however, may be guessed from some other particulars that have come to light with reference to the International Trust Company of Manhattan, which was one of the early failures. Deputy Attorney-General Mackey gave an account before the Supreme Court at Kingston of how this trust came into being. It was to have a share capital of $500,000 and a "surplus" of an equal amount, that is to say, £200,000 in all, and this comfortable little sum was all built up upon a basis of £1,000 in cash. That was all the money found. One gentleman drew a note for $500,000, which he discounted at the

Oriental Bank, putting up as security 3,012 shares of the Brooklyn Bank and 2,500 "share of vouchers" for International Trust stock, a thing that had yet to be created. The $500,000 thus procured was put to the credit of the new trust. Then two other gentlemen raised $250,000 on another note by discounting it. This left only $250,000 to be found to complete the gilding, and an unauthorised note of the Borough Bank was manufactured for $100,000 and went into the "International" deposit account. Then the cashier of the same bank gave a cheque for $145,000, which did not represent any real money, so that the whole amount except $5,000, or £1,000, was duly found, and all out of nothing. A most interesting display.

Money has, as might have been expected, been dear enough these last few days on the Wall Street market. It rose on Monday to 25 per cent., on Thursday it was 18 to 20 per cent., and even in the end of last week rates were 15 and 16 per cent. Towards afternoon, of course, the overnight loans were often arranged for less, but these were the prevailing rates, and the premium on gold, instead of disappearing, hardened to from 1¼ to 1½ per cent. A critical time is approaching, which would partly explain these adverse movements quite apart from end of the year requirements. Notices given to Savings Banks for the withdrawal of deposits will begin to expire early in the year, and a determined effort must be made to meet all demands presented. If the Savings Banks succeed in paying off depositors, then the ordinary banks will be compelled to follow their lead, and as the nervousness of the community with regard to the stability of the banks does not seem to be much reduced, it is not unlikely that pressure will be felt by the banks throughout the country before 1908 has run much of its course. There are, however, comforting incidents to note. That official holiday seems to have ended in California without bringing a renewal of the troubles, and in other parts of the country where savings banks have ventured to reopen they have been allowed to keep the paper money they had got together. Some railway dividends are also being declared as usual, and only the Missouri Pacific is to pay its 2½ per cent. in stock at par.

Passing Events.

The interim statements issued by several of the Assam tea companies managed by Messrs. Geo. Williamson and Co. do not give a very encouraging idea of what the outcome for the year will be. In all five cases the quality produced was quite up to the previous year's standard, but the market's attention has been turned towards the lower grades, and Assam teas have been rather out of favour. Sales to date are considerably smaller than for the corresponding period of 1906, and prices on the whole are lower. The Moabund Company gathered a crop of 1,732,480 lbs., or much the same as a year ago, but has sold only 860,235 lbs., or 212,527 lbs. less, on which it realised an average of 8·65d., compared with 9·30d. But the Tingri Company suffered even more severely as its sales come to 247,095 lbs., against 333,267 lbs., and the price has dropped by nearly 1d., to 11·88d. The Attaree Khats Company gathered 41,595 lbs. more at 1,106,880 lbs., of its usual quality, but sales are down by 112,894 lbs., and the price is 0·67d. less at 8·63d. In the case of the Majuli Company there was a decrease of no less than 177,964 lbs. in output, but, thanks to an improvement in quality at two of the estates, the average only dropped by 0·14d. to 8·42d., while the Borelli, with a reduction of 50,123 lbs. in the crop, has secured practically the same price as a year ago at 8.22d.

The Shah has given way, and the Persian constitution triumphs. This is regarded, the telegrams say, as a great defeat for the Russians who, we suppose, have been backing absolutism in Persia as at home. Only we thought it was to be "hands off" in Persia for Russ and Briton alike. Anyhow, absolutism in Persia is not furnished with the means to maintain itself. It has neither a drink monopoly to poison its people with nor an obedient band of cosmopolitan financiers in Paris, Berlin, and London to supply it with the sinews of war for "pogrom" exilings and jail-crowding. So the Persians may yet get a chance to work out their own salvation, and the terms said to have been accepted by the Shah promise not so ill. Here they are, so far as they concern the outer world: To assign 200 infantry as a permanent guard for Parliament; to place all troops, including the "Cossack brigade," under the ministry of war, and to limit the duties of Russian officers employed to drilling. Hitherto, it seems, these officers have been in actual command of the troops. And now the shops have reopened.

The Russian Bank of Commerce and Industry is going to increase its capital, by the help of the Bank of Rome of all concerns, and the Rouvier Bank of Paris, which must be a new or a private affair. These two between them are said to have found £200,000, or "subscribed" it, and, growing bold after this feat, they have taken an option to subscribe £500,000 more at one swoop. Is the money to be used to keep the starving peasants alive this winter? Is the Russian bureaucracy at last alive to the truth proclaimed by our socialists that "the children of the nation are its greatest asset?" That, indeed, would be revolution. But in all seriousness, what is this Russian bank going to do in present circumstances with all this new foreign money?

Lieut. Riznitch has been delivering to the Russian Navy League in Petersburg a lecture which seems worth study by our Admiralty, busy in driving the harassed taxpayer to despair with its *Dreadnoughts*, battleships, gunboats, armed cruisers, and other metallic monsters of the deep. Premising that a reconstruction of the Russian battle fleet would cost £150,000,000, most of which would be spent abroad—and he might have added, all of which would have to be borrowed abroad—and was altogether more than Russia could afford, and whose upkeep, moreover, would involve an annual charge of £25,000,000 upon the budget, he proceeded to plead in favour of a fleet of submarines. Your battleship, he said, costs about £2,000,000, a submarine costs at the outside £100,000, and is just as good a "fighting unit" as your costly leviathan. A whole fleet of these submarines could be built in a year, and it would take eight years to complete a battleship. There are only about 200 of these dangerous craft in existence, of which Britain has 50, and on the basis of these calculations, Russia might have 50 of them ready within two years at a cost of less than £5,000,000. And any one of them, it may be added, would be competent to send the biggest *Dreadnought* to the bottom in a moment.

A very interesting account of the business was given by Mr. Smith-Wisby, at the meeting of the Darracq-Serpollet Omnibus Company, held this week. Various circumstances have retarded its progress, especially the lamented death of M. Leon Serpollet, but it is now producing its vehicles, which are driven by superheated steam, and 20 of them, the property of the Metropolitan Omnibus Company, are running on the streets of London. There are others at work abroad, and the experiment will be watched with interest and sympathy everywhere by the perambulating citizen. That the motor vehicle of all uses has come to stay we have never had a doubt, but no one wants it to stay in the form of a stinking, clattering, shivering, grunting monster, the fumes from which poison the air. A silent, smooth-running, easily controlled coach is what traveller and trader alike require, and if the Darracq-Serpollet company can supply this in a form at once efficient and economical in working, it will have a prosperous future.

More money is required for that meritorious enterprise, the Anatolian Railway, and the Sultan has graciously given his assent to doubling its capital. When, therefore, the money can be raised its total will be increased to £5,400,000. We hope the money

will fructify, and that the Sultan's Bashi-bazouks will leave it and its customers alone.

Notes on Books.

Co-operative Industry. By Ernest Aves. (London: Methuen and Co.)

Space does not permit us to review this interesting book as we should like, but it must not pass without notice because the author has produced a valuable historical review of the developments of co-operation in this country during the present and past generations. Even now co-partnership of this or any profit-sharing description is in its infancy, but the hope of future industrial peace and prosperity undoubtedly lies in this direction, and not in the direction of Socialism or glorified bureaucracy. The more people are educated to regard themselves as individually responsible members of a community, whose interests ought to be harmonious instead of antagonistic, the better will it be in time to come for both capitalist and workman. Distrust, as Mr. Schloss, of the Board of Trade, whose report is quoted by Mr. Aves, points out, hinders the unification of interests between employers and employed, but with education and experience that should disappear, and when it does civilisation will have reached a higher plane than it has ever yet stood upon. We could make many quotations of an interesting kind from these pages, but must forbear. It is, however, well worth reading all through.

Trades and Railways (The Traders' Case). By Thomas Waghorn. (London: Effingham Wilson.) Price 4s. nett.

It is a strong case and well stated, a little technical perhaps here and there, but most useful on the whole, and it ought to be in the hands of everybody who has freight business with the railway companies. We are very far yet from the ideal of fair and equal rights, and the cases cited by Mr. Waghorn reveal instances of hardship which may not have been due always to the rapacity of the railway companies, but is certainly due to their lack of appreciation of the limits within which their business ought to be conducted. Take, for instance, the handling of small parcels, or "smalls," by the companies. Their charges on these are always much in excess of the legal rates on large consignments. The companies charge what they think fit, and the evidence of Mr. Thomas Brook, of Plymouth, is cited to show what unlicensed freedom of this kind means. His firm receive from Manchester consignments of a total weight of 170 tons yearly. Of this total 86 tons consigned as ordinary traffic bore a railway charge of £197, while 84 tons consigned as "smalls" was charged £222. This might not seem an unreasonable difference, seeing that there was extra cost in handling the small traffic, but the companies propose, it seems, to schedule their charges, so that on the 84 tons of "smalls" from Manchester to Plymouth the charges would be raised from £222 to £912. It is the same with traffic from London and from every part of the system. Of course, these excessive charges may not be often or always exacted, but the companies still consider themselves at liberty to put upon the small traffic what they think it will bear. That is one aspect of the subject, and there are many others stated in this book well deserving ventilation.

Several handbooks of a new and useful description have recently been issued by the *Financier and Bullionist,* Limited. There is, for instance, the *Canadian Securities Handbook,* compiled by Mr. R. J. Barrett, the Editor of the *Bullionist* newspaper. He has done his work well, and given us a handy and most useful book of reference. It appears to be as complete as could be expected in a first issue, and will be particularly valuable just now when the position of Canadian banks will require to be watched. The latest balance-sheets of these banks are given, and about other companies there is much useful and up-to-date information.

From the same quarter we have received the *Rubber Share Handbook,* which should be most useful. It will be quite startling to the uninitiated to discover what a number of these companies have sprung into existence within the last few years. They are to be found working in Ceylon, the Malay Peninsula, British North Borneo, Sumatra, Java, South America, and Africa. So opportune is this handbook that Messrs. Gow, Wilson, and Stanton, Limited, the enterprising produce merchants and dealers in tea and rubber shares, have made the handbook their own, having bought up an edition, to which sundry special additions have been made by them, and circulated it to their clients.

TRADE AND PRODUCE.

Wheat.—The broken week has only shown a desultory trade, but prices have been well maintained, foreign wheats, if anything, being a little dearer than last week. Farmers have learned the wisdom of restricting their deliveries, and the supplies put on the market this month have been considerably under those of November and compared with last season. Last week 57,590 qrs. were delivered averaging 34s. 9d. against 68,978 qrs. averaging 26s. 3d. in the same week of last year. Supplies from abroad continue liberal, but sellers are not pressing sales, as their stocks on hand are not excessive and the strength of the markets can therefore be maintained. From abroad last week we received 307,930 qrs. against 451,220 in 1906, and the total quantities of bread stuffs on passage are estimated at 2,355,000 qrs. this week against 2,060,000 last to the United Kingdom, and 1,120,000 qrs. against 1,180,000 to the Continent. American markets have had one day more than European as they opened on Thursday, when trade was firm and prices higher, notwithstanding the absence of foreign news.

Wool.—Nothing will be done in wools and woollens till the turn of the year, and Monday and Tuesday of this week saw markets of a holiday nature. The latest of colonial wool auctions, held at Liverpool on December 20, showed a fall in prices compared with last season of 15 to 20 per cent. for merinos and fine crossbreds, and 25 to 35 for medium and coarse, and importers have not done well of late. In wools bought in Australia at the early sales and at high prices the losses may come to from £3 to £4 per bale, the high Bank rate and consequent forced sales being largely responsible for the decline. Holders of English wools are refusing to do business at all just now, preferring to wait and see what the New Year brings forth. Trade with the colonies keeps up fairly well, though the Australian tariff is beginning to tell against business in that quarter, particularly for fine goods, and with the United States there is little doing.

Cotton (from our Manchester correspondent).—This has been a broken week, and few attempts have been made at active operations in any section. The general demand is on a small scale. No particular change of moment has shown itself in the outlook. In piece goods for export a miscellaneous inquiry has been dealt with, but buyers and sellers have had difficulty in getting to close quarters for lots of any magnitude. Our large Eastern markets are not buying freely at the present time. Various opinions are expressed as to the outlook, but in certain markets stocks are rather heavy and clearances slow. More offers have come through for Calcutta, but the sales are not important. China remains quiet, and no improvement in the demand can be expected until the position of silver is more favourable to free buying. The Mediterranean outlets have been slow, and no market has displayed much animation. The home trade houses have been quiet, certain establishments closing their premises longer than usual. To buy yarn and produce cloth is certainly a lean business to-day. Manufacturers whose position is already discouraging are losing ground. Home trade American yarns have been firmly held, but only a quiet business has transpired. The production of the spindles seems to be well cleared by the looms. No stocks are heard of at the mills. Medium wefts have again been pressed for by users. The demand from abroad has not been important, but business is difficult to arrange for India in single yarns owing to the deep engagements of producers. Bolton spinnings have been easier in price when tested, but there has not been much business offering. Engagements are running down in most directions.

Coal.—As practically the whole of the week has been more or less of a holiday nature, next to no current business has been done. The year closes quietly with prices considerably lower than during the summer months, and the prospects, as far as they can be seen, for next year do not show much likelihood of another high boom. January contracts in the Welsh markets are being taken on at present prices, and for the supplementary railway contracts under discussion coalowners will not probably take less than the present price of locomotive fuel—12s. per ton—Gas coals also maintain their high figure, so the immediate outlook in some branches cannot be regarded as depressing.

Copper.—The market during the first two days of the week was fairly active and of a hardening tendency, higher cables from New York and some bear covering helping to give strength. A slight reaction set in Tuesday, but just before the close the undertone grew firm again, and values closed at £60 10s. cash and £61, 15s. three months. To-day, with business quiet, prices slipped back to £60 2s. 6d. and £61 5s.

Tin.—Fluctuations were wide during the two days here, prices at one time going up £2 to £2 10s., and both cash and three

months' metal realised £124. Owing to easier Eastern advices and some realisations Tuesday's market reacted to £120 cash and £121 5s. three months, but the final tone was up again at £121 5s. cash and £122 5s. three months.

IRON AND STEEL.—The close of the second half of the year in these industries shows a very different tone from those of the first half. It is dull and depressed, with an outlook that does not promise very great things in 1908. Makers of hematite iron are doing nothing practically in forward business, and are not well supplied with orders, and the fact that prompt prices are higher than forward is generally looked upon as a sign that they will go lower still, for in times of good trade the reverse is the case. Cleveland pig-iron has been slightly stiffer of late, and three months' prices are coming nearer to prompt, the reduced production more than any better demand keeping them from falling lower. Stocks in Connal's stores are still decreasing, for makers are determined not to let any accumulations interfere with their profits, should prospects improve, and they also hope, says the *Engineer*, to get the cost of production down by bringing about a further cheapening of material. The dearness of fuel and ore has been an unsatisfactory feature all this year.

TEA.—Messrs. Gow, Wilson and Stanton, Limited's, notes on the tea industry of 1907 are on the whole of an encouraging nature for the trade. It seems probable, they think, that the depression of so many years has departed, for consumption both at home and abroad has materially increased, while up till now very little new land has been put under cultivation. Particularly has this expansion been noticeable in foreign markets during the last two years, for while in 1905 we exported under 130 million pounds, last year the quantity rose to over 162 millions and this year to 171,500,000. And there is no doubt, say Messrs. Gow, Wilson and Stanton, that the expansion in these markets has saved the industry from very serious losses, and largely contributed to the more satisfactory position at the present time. The quality of Indian tea, although fully up to average, has not been as good as in 1906, when the Assam crop was particularly good, nor was Darjeeling quite equal in flavour to that of 1906. Ceylon quality has shown no material change, but has remained of a usually satisfactory nature. Java has improved both in quality and output, and another feature of the year has been the quantity of Natal tea sold in London markets. As regards the average price, it has been the highest since 1899, but this does not imply that all producers have benefited by the rise. Medium grades have been unduly depressed, and it was only the high prices ruling for common grades that so largely raised the average.

Answers to Correspondents.

****** A Key to these Answers will be posted early each week to Subscribers of ONE GUINEA per annum, 11s. for six months, or 5s. 9d. for three months.***

Deposits against future queries may be lodged with the Publisher.

E. W.—There is always a free enough market in these, but we would not recommend a purchase in the present state of the metal market.

MEGRIM.—We do not think much of either as a speculation for the rise at present. Both might spurt up a little, but time and market conditions are against their keeping up.

E. J. T. (1) Years hence the property may stand on its own base. At present it depends upon the guarantee of one of the least stable governments on earth. Therefore its securities are a rather treacherous gamble. (2) If the "life" of the mine is only eight years or thereby as many allege, then the shares are fully 50s. too dear, but if the life is as others assert twice as long, they are a fairly promising speculation.

THANET.—No. 1 is the better bond of the two, but both will, we believe, be cheaper before long.

W.—(1) Yes, as a speculative investment for a moderate amount. (2) We are doubtful about these, the company is repaying its first charge by instalments, but the chief industry of the district is not thriving.

NEXT WEEK'S MEETINGS.

MONDAY, DECEMBER 30.

The Investors' Review.

The Week's Money Market.

BANK RATE 7 PER CENT. (Raised from 5½ per cent. to 6 per cent. on Monday, November 4, and from 6 per cent. to 7 per cent. on Thursday, November 7.)

Norfolk House, Friday Evening.

There will be no cheap money at the beginning of the year as far as indications go. Possibly enough until the large amounts borrowed at the Bank in the beginning of the week, to-day, and on the three remaining days of this year are repaid, there may be a slushiness in day-to-day rates. There was that to-day, in fact, in the afternoon, when the credits obtained in the morning at the Bank of England were offering overnight. It did a large business in loans into the new year this morning at 7½ per cent., and as up to Tuesday night the increase in the other securities was £3,152,000, there is every probability that the market will be so heavily in debt to the Bank by Tuesday night as to prevent any relief coming to it through the disbursements of the dividends a few days later.

All the borrowing that took place up to Christmas Eve did nothing to help the open market, because the money was sent into circulation, as is shown by a decrease of £2,718,000 in the total reserve, which is now down to £19,682,000. A little of the money was also added to the public deposits, and the market was therefore left just about as poor as before it began to borrow. Doubtless at the beginning of the year, when the taxes commence to flow in, currency, now dispersed by the Christmas holidays, will come back, but it will come back to the credit of the Treasury, not to that of the open market, which consequently looks like being hard up immediately it has repaid its end-of-the-year advances from the Bank.

Discount houses have tried to keep rates firm, and to-day some of them quoted 6⅛ per cent. as a practicable rate on three months' remitted paper. In reality, we fear 6 per cent. was about the best of it because hope springs eternal in the mind of the credit jobber that money is going to be cheap almost immediately. Business was done at 5⅞ per cent., and sixes were taken below 5 per cent. Where cheapness is to arise, however, no single bill broker has been able to indicate. There is just as much prospect of stress on all markets in the new year as there was last week, or when the Bank of England rate was raised to 7 per cent. in the beginning of November. Every market is in a condition of unstable equilibrium, and any morning may bring us news of disasters in Germany which would upset all calculations. By February we have to pay back about £3,500,000 in gold to the Bank of France, and unless the metal comes in between now and then our market will be unable to do this without a further convulsion that may send the Bank rate up to 8 or 9 per cent. The United States cannot send back the gold except at the cost of a renewal of liquidation over there upon a scale hitherto unexampled. Its land values inflation is seemingly about to collapse now. Therefore, cheapness cannot be relied upon on any Money market early next year, and our dealers in credit will do well to guard themselves against any delusion of this kind.

The joint-stock banks have probably done well in the current half-year, and some of the discount houses are also no doubt in a strong position, but there must be instances where loss of a serious description has arisen, and we fear some of the smaller credit institutions have suffered severely of late, especially where they have had to live by pledging their floaters. It would take little, therefore, to upset some of them, and if a miscalculation should be made about the course of the Money market in the new year there will be trouble. It is not going to be an easy market for some time to come, nor a market in which credit can be trusted to fall to low rates and remain there; of that we feel sure. Quite apart from the hollowness of the industrial position everywhere, the necessities of spendthrift and debt-swamped Governments will alone insure us against the humdrum respectability of 4 to 5 per cent.

In their careless over-confidence bill brokers cheered themselves to-day with the old story that the gold bought for the States in the beginning of the week would not go after all, because it has been resold. The bullion brokers deny this, but the Bank got the Australian gold in to-day and other oddments to the amount of about £170,000 at 77s. 10d. per oz., a fall of 1½d. The Bank is also expected to get a good share of the £1,000,000 to be for sale on Monday, and if it gets this that will be the best possible foundation for the cheapness of credit that is to come.

Quite a number of small calls fall due next Tuesday, and they total up to about £1,000,000, the finding of which may increase the pressure for short loans at the Bank.

SILVER.

The market for bars was depressed last Saturday by offerings from China, and prices fell to 24¼d. per oz. for spot and 24 9/16d. per oz. for delivery two months forward. A moderate amount of bear covering, however, followed, which brought about a recovery to 24 9/16d. and 24 13/16d. per oz. before the holidays, but to-day on a renewal of the selling pressure from the Far East quotations dropped back to 24 7/16d. and 24 11/16d. per oz., and they closed weak at those figures. Applications for the Rs. 25,00,000 of Council drafts on India on Tuesday amounted to Rs. 1,05,35,000 in bills and Rs. 33,00,000 in telegraphic transfers. Of these Rs. 16,86,000 were allotted in bills and Rs. 8,14,000 in transfers, tenders at 1s. 3 29-32d. and 1s. 3 15/16d. per rupee respectively receiving about 14 per cent. The amount to be offered next week is increased to Rs. 50,00,000.

The Stock Markets.

The year may be said to be doing its best to make a good end. It has been a bad year all through, full of disappointments and loss to the holders of public securities and to many classes of traders, and we do not care to look back upon it now. But on the Stock Exchange, at least, it is bracing up to make a brave show as it goes away. Interruption of business by the Christmas holidays reduced the opportunity of players to demonstrate on the market, but up to Tuesday evening most things were tending upwards and noticeable gains occurred in Consols and other trustee securities, in many foreign bonds, in the Scotch Railway stocks and some of the English ones, while the Yankee assortment paused in the downward sweep and even lifted a little now and then, though a mean market enough. Whether all this is to be attributed to closing of accounts open for the fall or to buying on the part of those who, with invincible confidence, look for cheap money and better market conditions early in the year cannot yet be determined, and it is perhaps useless to speculate upon the meaning of the changes. We shall know soon when the new year comes in how well or ill founded the hopes are, and it will be as well to wait until then. We, at least, have nothing fresh to say this week.

Perhaps the most notable rise of all has been in United Railways of the Havana common stock, which between Thursday night and Tuesday rose 7. There was also considerable strength shown in the Argentine group of railway stocks without much further change. Mexicans were stronger, and the only prominent weakness in the Foreign list was among Nitrate Railway shares. These were depressed by the news of a blood-stained conflict on the nitrate fields, where the workmen appear to have a genuine grievance in the depreciation of the Chilian currency which has made their wages insufficient. We hope their case will be taken into consideration by the boards of the nitrate companies and that they will not press their monopoly too severely, else a profitable industry may fall into confusion.

The lightness of the account on the Stock Exchange prompts its members to look for cheap money early in the year. They are mistaken in this hope, but even the rates charged at to-day's carry over did not modify the current view. Joint-stock banks and other lenders asked and got 6¾ per cent. for advances to the market, and money brokers seldom obtained balances below 6½ per cent. ; that is to say, rates were about ¼ per cent. higher than last time, and inside the market the contangoes were correspondingly firm, the large borrowers on American Railroad shares paying 6¾ to 7 per cent. and borrowers on Foreign Railway shares sometimes more. In fact, the all-round rates were about 7 to 8 per cent. inside the market. Scarcely any business was transacted, and prices were disposed to recede, especially after the Bank return made its appearance. The close, however, was quietly steady in most sections, with no talk of failures.

THE WEEK'S PRICE MOVEMENTS.

WATERWORKS.—Rise: Montreal ½, to 90-93.

The Week in Mines.

Apart from the arrangement of the fortnightly account the mining markets, like most other sections of the House, have had little to occupy their attention during the past week. The settlement fell somewhat awkwardly, last Tuesday being carry-over day in mines while yesterday was the general contango, names will be passed to-day and the settling is fixed for Monday. The House, however, did not feel quite so jubilant this Christmas Eve as is usually the case, and seemed glad that the settlement arrangements restricted the time available for playing the fool. It has been a thoroughly bad year in all respects, and the suspension of De Beers' dividends wound it up fittingly. We should like to be able to discern some signs of genuine improvement in the mining markets as well as in others, but the horizon still lacks indications of a sound and solid revival of business based on true and genuine values, and some of the best authorities in the City predict even worse storms ahead. The best way to prepare for such and to safeguard oneself against further severe losses is to buy nothing that you cannot pay for with ease with a little bit left over for contingencies. There is no promise of abundant and easy money after the first few weeks of the year, and the market is piling up a debt at the Bank in addition to that already incurred, which promises to keep it well under control until a long way into 1908, besides which we have important obligations to meet to foreign countries.

So far as it has gone the adjustment has given no trouble, although in one or two directions losses during the fortnight have been fairly considerable. The general rate on South African gold, land and finance shares was 7½-8½ per cent., but, as usual, there were a good many exceptions. Gold Fields, Johnnies and T.C.L. were all continued at 6½-7½ per cent., while Randfonteins, Modders and Rand Mines cost ½ per cent. more. East Rands could be borrowed on at 6-7 per cent., and in the Diamond share market charges were fairly high considering the persistent selling within the fortnight. An attempt was made to create an artificial scarcity of De Beers shares, but there were plenty available for delivery, and the rate was round about 5-6 per cent. throughout. Jagers were taken in at the same figure, and on New Vaals and Premiers the charge was 6½-7½ per cent. In the Rhodesian section Tanganyikas and Zambesias were done at 6-7 per cent. and Chartered at ½d. to 1d., the general rate being 7-9 per cent. West Australians were carried over at 7-8 per cent., Australian Copper shares at 6-8 per cent. and Broken Hills at 4-6 per cent., apart from "Props," which opened at "even" and went to threepence "back." The leading American things were done at 7-9 per cent.

As to the making-up list, the upset in Diamond shares showed up prominently. De Beers deferred had a loss of 2¼ against them. Premier deferred fell 1⅜, Jagers deferred 11/16. De Beers preference, which get their dividend, were ⅞ down. Premier preference dropped ⅜, New Vaals 5/16, and Voorspoeds ⅜. Other striking falls were ¾ in Welgedachts, 5/16 in Tanganyika and Eastern Gold Farms, and ¼ each in Ferreiras and African Concessions. Against these we can place advances of ¾ in Meyer and Charlton and 7/16 in H. F. Co. and Roodepoort United. Among West African things Nigeria Bitumens made up 7/16 worse, and African Gold Dredgings showed a loss of ⅛. There was a prominent loss of ¾ in Anglo-Belgians among Egyptians, and in the West Australian division conspicuous declines were 7-32 in Ivanhoes and 7/16 in Kalgurlis and Mount Boppy. After a long succession of declines Broken Hill shares at last showed improvement under the lead of Proprietarys and Block 10, which were ¼ and 3/16 higher respectively. In the Copper division a sensational fall of 3⅜ occurred in Lakes, while Utahs dropped ¾, together with Queensland Copper Freeholds and Cerro Murianos 7/16. Great Cobars, however, were 5/16 higher. Tin shares receded considerably on the account, Pusing Lamas and Tronohs falling 5/16, South Croftys ¼, and Clitters and Kledangs 11/16. American Gold shares showed no particular change, apart from a rise of 3/16 in Santa Isabels. Siberian Proprietary and Siberian Mines were each ¼ lower, but Anglo-Siberians advanced to the same extent. Burma Development deferred made up 1½ worse.

Considering that the market is entirely dependent upon inside support, Kaffir shares keep up remarkably well, and it looks as though a great effort is being made to keep prices together in hopes that the public, noticing that values do not sag away, will come to the conclusion that the fall in prices is about at an end, and that no great risks would be run in buying small parcels. But it has to be borne in mind that the support now being extended makes continual additions to the load of shares already being carried by the big finance houses, and they are only seeking and endeavouring to create an opportunity for peddling them out again. Every attempt made this year to bring the public back has ended in dismal failure, and it is now about a month since the last was given up in disgust. But another effort will presently be made, and it may come soon, so be on your guard against being stuck with shares in companies that are still a long way off the productive stage and where dividends cannot be forthcoming for a very long time. There was a very good letter from a Paris correspondent in Friday's *Financial Times*, pointing out the iniquities often concealed, and sometimes not concealed, in the amalgamation schemes recently so much favoured. The magnates are warned of the dangers they run in further shaking public confidence, already almost shattered, and the writer's remarks are well worth attention. Paris assisted to make the tone of the Kaffir Circus a little stronger, and some investment buying of the better class shares was reported from Germany. Monday was option day for the final account of the year, this being a favourite time for such class of speculation, and it appeared that a moderate number of shares was called, another influence on prices. The cable from the Rand showing the aggregate dividends paid during 1907, which came to hand on Christmas Eve, would have been better kept back for two or three days, when it might have received a little more attention. In the twelve months 42 companies declared total dividends of £6,962,500, an increase of £1,396,500 compared with 1906, when 39 companies contributed. The outside district mines paid £169,162 in dividends, making a grand aggregate of £7,131,600, and the Rand payments represent rather more than one-fourth of the value of the output. On balance price movements are in the right direction, the leading counters in particular showing up best.

Among Land and Finance shares, no further loss occurred in Welgedachts, and others inclined to firmness, more especially Central Minings which naturally go forward when prices of the company's share holdings improve. Rhodesians, however, have been almost a blank, and since the De Beers blow the Diamond share market has been much quieter. De Beers have improved slowly to about 15, partly on Paris influences and bear closing, but there is said to be intense indignation on the Continent at the turn of events, and there is talk of holding meetings of protest with the idea of

getting a representative of French interests on the board. Premiers collapsed to 6½ soon after the opening, but rallied again and closed above the worst. Jagers also recovered a small loss, but Laces, New Vaals, and Roberts Victors were easier on balance.

The warning uttered some weeks ago that the Oroya-Brownhill output might have to be reduced was evidently well timed, as the directors now issue a circular intimating that recent developments in the No. 5 level have not improved the position, and that the rich ore from this section of the mine, on which the maintenance of the present output depended, is rapidly becoming exhausted. The managers therefore consider it advisable that the output, starting with the new year, should not exceed £16,000 per month, and the board naturally approves this course. Quotations weakened on the news, and one or two others in the West Australian group eased off, but on the whole the market was not bad, although terribly idle. The colony proved to be a moderate buyer of Broken Hill shares, and prices made further headway. Most of the metals advanced, and, as usual, the carry over revealed a shortage of shares, notably Proprietaries, which, as mentioned above, commanded a "back." West Africans were neglected, but steady, and as usual Egyptians were not mentioned.

Copper shares have been moving somewhat erratically, but on the whole the tendency has been adverse, the metal going lower after a firm opening. Cobars, Elliotts, Capes and Namaquas all went the right way, but Tintos, Amalgamateds, Anacondas and Bostons fell back. Tin shares went with the metal, becoming dull after a better opening.

Miscellaneous Mines were very quiet, and presented nothing of real interest. In the American list, Santa Isabels, Strattons, Ventures, Camp Birds and Le Roi No. 2 all found lower prices. Indians were pretty steady, and so were Siberians, apart from Siberian Mines. Talismans and Waihis eased a trifle in the New Zealand group, but Progress shares hardened slightly.

MINING NEWS.

LUIPAARDS VLEI ESTATE AND GOLD MINING.—Development and production proceeded regularly during the year ended June 30, development being carried on chiefly in the deeper levels to the east of the main shaft. Payable ore at the close of the financial year was 235,588 tons of an average assay value of 7.6 dwts. per ton, and in addition there are 122,829 tons of low-grade ore. No work has yet been done on the battery reef, which traverses 71 of the company's claims, nor on the south reef, which is found of payable value on adjacent properties on the estate. It has been decided to commence the sinking of an additional main shaft for a more extensive development of the mine in depth. Tons crushed in the twelve months were 106,654, the gold recovered being 29s. 8.267d. per ton, the costs including development redemption 20s. 4.973d. and the profit 9s. 3.294d. Total gold recovered was 58,719 ozs., and the revenue from all sources came to £257,481. Working expenditure was £170,107, and after providing other outgo as well as £17,731 written off for depreciation, the balance remaining is £57,891. This is added to the credit of £605 brought in, making a total of £58,496. No dividend can be paid just now, but in due time the shareholders will reap the advantage of the prudent policy of paying off loan indebtedness from profits. A sum of £100,000 was raised for the erection of the mill and recovery plant, of which £40,000 was paid off during the past financial year and another similar amount was liquidated by the 13th inst.

ANGLO-CONTINENTAL GOLD SYNDICATE (1899).—In the twelve months to June 5 last this company derived a total revenue of £37,702, and gathered a nett profit of £20,844. Unfortunately, however, provision must be made for depreciation to the amount of £28,715, leaving only £1,128 to go in reduction of the debit brought forward, lowering it to £17,829. Difficulties have arisen in connection with the silver lead mining properties in the State of Zacatecas, Mexico, and prevented their sale to an English company, which is intended to be formed to acquire them. It appears that certain shareholders in the Mexican company, which owns the principal property, have been contesting the validity of the increase of capital, but no doubt is entertained that the company will win in the end. The development of the mine is proceeding with satisfactory results, partly by means of funds supplied by the syndicate and partly from the proceeds of ore won in course of development. The holding in the share capital of the Mexican is approximately 63 per cent. of the original capital and 97 per cent. of the new capital, which is the subject of litigation. Options have recently been acquired in connection with two silver ore properties in the State of Jalisco, thought to be very promising, and interests are held in the South-West African Company, which controls the Otavi Mines and Railway, the Pretoria Block A and the British Borneo Exploration Company. Apart from the revenue deficiency, the balance-sheet shows a pretty strong position, although it is admitted that the investments valued at £146,505 have further depreciated since the accounts were closed. The cash balance is £78,073 and floating liabilities are quite trifling.

HENDERSON'S NIGEL.—The actual information conveyed to the shareholders in the report for the year to June 30 occupies two lines and a quarter. It is to the effect that the condition of the property remains as at the date of the last report, and no developments of a favourable character have been reported on any of the adjoining properties. To keep the mine going cost £1,198 in the twelve months, business alone taxes £7 12s and directors' fees £200, while the revenue was £220, leaving a loss of £978, which increases the deficiency to date to £13,054. Property is entered at £279,291 and liquid resources appear at £13,867.

NEW BELGIUM (TRANSVAAL) LAND AND DEVELOPMENT.—Including £333 added during the year to September 30 last the company now has a debit to profit and loss of £50,512, and the chances of making it good are remote indeed. The company seems to have gathered together a new prospectors, and has entered into negotiations for settling natives on its farms on condition that every adult over the age of 18 pays a fixed hut tax per annum, and works for six months in each year in the Rand mines. This arrangement has the consent and co-operation of the Transvaal Government, and if the negotiations are successful a steady and increasing revenue is expected.

ETNA DEVELOPMENT.—The most satisfactory point about this undertaking is the improbability that any considerable part of the capital is held by the public. It took over sundry properties from some of the Rhodesian swells and paid for them almost entirely in shares. The principal ones appear to be the Etna, the Gatling Hill and the Homestead and Gladstone. No work was carried out on the first named during the year, but 75 claims in the immediate neighbourhood of the mine have been acquired with a view to increasing the tonnage capacity of the property, and the ultimate erection of a larger plant than would have been justified by the Etna mine alone. Ore so far developed at this mine amounts to 40,000 tons of 9 dwts. average, as well as a considerable quantity of surface rubble, 30,000 tons of which it is estimated can be profitably milled. Several substantial offers for leasing the mine on tribute are now under consideration as well as the question of its exploitation by the company. The tributor of the Gatling Hill mine relinquished his lease in March last, and a new arrangement was entered into with other parties under which the company receives 12½ per cent. of the gross value of the gold won. Revenue from this source last twelve months was £1,579 against £1,056 in the preceding twelve months, and milling operations on the Homestead and Gladstone, which is also under tribute, yielded only £477 against £479 for a portion of 1905-6. The resumption of operations on the Sunyati group of claims in the Gwelo district has been postponed for the present, and certain blocks the prospects of which did not justify retention have been abandoned. Work on the Day Dawn claim, a property situated in the Mazoe district within half-a-mile of the Jumbo mine, is to be put in hand. Preliminary operations on these claims exposed ore of good payable grade, and an extensive scheme of exploratory work is considered to be fully warranted. General expenditure to date is £6,110 and £2,041 appears on account of development expenditure on claims abandoned and depreciation on plant, machinery, buildings, &c., yet to be provided for. Cash and loans on security amount to £4,784.

DUFF DEVELOPMENT.—Any shareholder of this concern who wants to feel cheerful at Christmas had better defer his study of the much belated report until some time next year. The statement covers the year to December 31, 1906, and owing to the "unavoidable delay" in presenting it a supplementary report by the general manager is also issued. Shareholders are referred to events as far back as November, 1906, namely, the absorption of the Kelantan Gold Dredging Company Nos. 1, and the decision to devote all the available cash resources to the planting of Para rubber. In May, 1906, the Kelantan Rubber Syndicate was formed in Singapore, and has leased to the company 5,000 acres of land, the lease of a further quantity not being confirmed. During 1906 the sum of £14,177 was expended on development work, £12,282 being devoted to the ore bodies in the Sokor district, but the capital available was insufficient, and mining operations were suspended, as also reported in November last year. There was a small loss on working the dredges of the Kelantan Company in the second half of 1906, and including this the excess of working expenditure over income in London and the East was £10,041. The first eight months of the current year, however, appear to be more satisfactory, approximate accounts showing that income and outgo have almost balanced. Dredging prospects appear to have improved. The manager's supplemental report of August last estimated that there was sufficient wash proved to keep four dredges running for about 18 months, and there was every reason to suppose that prospecting by means of borers would develop more ground. Subsequent reports go to justify these expectations. Capital outlay from the commencement of 1907 up to August last was £5,050, mainly in rubber planting. Revenue deficiency to date is £44,063, and cash is getting short.

Gold Finance Company.—It was the public's gold that this company has done its financing with, and up to date £46,496 out of a total subscribed of £61,332 has disappeared, the smaller figure being the debit balance existing at June 30, 1907. By a supreme effort the undertaking gathered a revenue of £157 during the twelve months then ended, and in the circumstances the directors will only take £350 in fees instead of the £700 to which they are entitled in the current year. But in the period under review their remuneration, hard-earned we may be sure, is the full amount, and after providing this and all other charges, including £6,648 for depreciation on sundry shares, the deficiency is £7,722. It is included in the above-mentioned total. You can scarcely imagine the terrific anxiety which the fearful depreciation in the shareholdings has caused the board, but the investments are mainly composed of shares in Cosmopolitan Proprietary and Bellevue, Limited, and the prospects of these would make you shiver on a midsummer's day, let alone now. There is also an interest in the Kurnegala Rubber Company, but the future of that, as with many another similar enterprise, lies beyond the vision. The main asset is now the shares in mining and other companies, valued at £15,533, and cash is £319, while £1,023 is due to sundry creditors. It seems ridiculous to spend several hundreds a year in keeping the concern alive, and if the "assets" were distributed doubtless the shareholders could "nurse" them as well as the directors.

Stratton's Independence.—For some time now the shareholders of this melancholy disappointment have accepted the inevitable, and no longer kick up rows at the annual meeting. They try to make the best of a bad job, and we have no desire to rake over ancient history, having expressed our opinion about the company's failure at the proper time. The results displayed for the twelve months ended June 30 are anything but brilliant, but an important change in policy has since been effected, and there is unquestionably some hope that future reports will be more encouraging. In June last the directors accepted a proposal to erect a dump and low grade wet crushing plant, the first unit to be capable of treating 5,000 tons of dump ore per month. There would also be a breaker plant to treat some 300 tons of low grade and medium grade ore per diem to be gathered from old pillars, stope fillings, and "caved material," and a dry process mill to treat 1,500 tons of high grade ore per month, to be derived from various sources. All this plant will cost about £40,000 and the funds are in hand in consequence of the decision not to pay anything away in dividends on account of the past twelve months. Already £22,000 has been remitted to the mine, and the cash balance, together with liquid assets, will be sufficient to provide the remaining £18,000. A second unit of the wet crushing plant is to be proceeded with as soon as a convenient site is arranged, to cost a further sum of £18,000, and no difficulty is apprehended in providing the necessary cash. When all is ready 10,000 tons of dump ore will be treated per month, and this should yield a minimum profit of £3,000, an estimate that leaves out of account any revenue that may be derived from bunches of high grade ore expected to be met with. The consulting engineer thinks the dump and low grade ore will keep the full plant running for eight to ten years, and if this estimate is approximately correct the erection of the mill stands to be fully justified. In the period under review the profit accruing to the company was £14,145 after meeting outgo of every kind, against £36,681 in the previous twelve months, when the shareholders received £75,000 in the shape of three sixpenny dividends. The balance brought forward was £25,090, making £39,235, or almost the amount required for the first unit, &c. No material change has occurred in the position and policy since the annual meeting last June, and the directors think the annual gathering may conveniently be postponed until the spring, when a practical demonstration will have been made of the new milling and mining scheme.

Koffyfontein Mines.—In the twelve months to the end of June 664,192 loads were washed, a decrease of 39,640 compared with the previous year, and the output of diamonds was less by 1,736 carats at a total of 31,604. The decrease is mainly due to the fact that some of the labour was taken off washing and employed in flooring blue ground. Revenue account takes a credit of £18,234 for blue ground on floors and shows a total income of £108,467 while the expenditure at the mine was £82,401 and in London £1,255. Depreciation took a further sum of £5,932 and £345 went in interest, leaving £18,533 nett, which brings down the debit to £29,526. Loads of blue ground on the floors at June 30 amounted to 367,673, and as native labour becomes available the stock will be increased so as to form a reserve from which the new machinery can be kept continually supplied. The new gear was practically ready for the trial run at the end of August, but in consequence of alterations it was not until the last week in October that a regular run of half the gear was possible. Nothing is said in the report as to its working.

Fanti Consolidated Mines.—We should like to set out in full the extensive interests possessed by this company, and say something about each, but this would entail a special Christmas Mining number, which would hardly be acceptable when people want to feel cheerful and forget their troubles. We must therefor content ourselves with indicating that whereas the book value of these interests is £388,248 the real worth at the date of the report was £149,641, taking current market prices where they exist, but cost or valuation where there is no quotation. But the eight directors, who include a couple of Right Hons., a German doctor, a major, and Edmund Davis, do not believe this depreciation is justified, and hang on to the book figure for balance-sheet purposes in the real Yankee style of valuing things well up and not bothering about current values. Debit on account of expenditure is £10,189 and while creditors and loans amount to £6,472, cash, loans and debtors run up to £16,882.

Westralia Mount Morgans Gold Mines.—Few West Australian mines have been more disappointing than this one. It has had the advantage of a careful and capable directorate and good management, but these things are of no avail if the mine does not open out as expected, and this concern has very far from fulfilled early promise. The accounts are terribly belated, covering as they do the year to December 31, 1906, but the directors observe that there have been so many extraordinary general meetings of the shareholders in the past year that there is little new to say. However, it may be well to recapitulate the events of the period under review. In March, 1906, the capital was increased by the creation of 40,000 ordinary and 130,000 preference shares, all of 5s. each. The former were issued as the purchase consideration for the "Liby lease," which adjoined the company's leases on the south; and the preference shares were offered to the shareholders *pro rata*, 107,875 being taken up. In the same month Mr. W. R. Feldtmann was appointed managing director and consulting engineer in London, and this gentleman visited the mine in July, his report being sent to the shareholders in September. Some development was done on the lines indicated by Mr. Feldtmann, but not sufficient to push the same to any definite conclusion, owing, the directors "believe," to lack of necessary capital. The company has had a good deal of trouble with the water supply, and difficulties must continue in the absence of periodic rains, but there has never been any shortage of water for the battery. In March of the current year Mr. A. E. Morgans tendered his resignation, but this was subsequently withdrawn, and Mr. Morgans continues to be managing director in Western Australia. The higher grade of ore treated during the period from April 23 to November 27 of this year has enabled the company to largely reduce its liabilities, and recent reports are to the effect that several bodies of ore quite up to the grade of that now being treated have been discovered in the upper levels. Liabilities in Western Australia have been reduced by £6,000 since July 15, and having regard to recent developments and the improved financial position the directors are of opinion that the money subscribed towards the proposed development syndicate should be returned, and this has been done. Profit and loss account for 1906 shows a loss of £39,882, but this is after writing off £21,200 for depreciation and £10,942 from development account. Total revenue deficiency is now £75,462 or something in excess of the share premium account £70,514, and we note a loan from bankers of £14,324.

Mills' Day Dawn United Gold Mines.—During the six months ended October 14 this company's output was 25,451 tons for 10,483 ozs., valued at £37,341, while 1,935 tons of concentrates realised nett £40,872, 5,414 tons of sands gave £3,340 and 22,285 tons of sands treated yielded bullion valued at £22,752, bringing up the total revenue to £104,306. Total expenditure was £55,493, including dividend tax, and £30,000 has been distributed in the shape of two dividends of 1s. each, leaving £18,812 to be added to the cash reserves. At the general meeting held at Charters Towers the chairman observed that up to the present the company had only explored about one quarter of its property, and out of that portion they had taken over a million pounds' worth of gold with about half a million pounds profit. If all went well he hoped they would take out another two or three millions, and foreshadowed a continuance of shilling quarterly dividends.

Mount Yagahong Exploration and Finance.—The report and balance-sheet of this concern only covers a period of 2¼ years to September 30 last, and the directors begin their apology to the shareholders with an excellent illustration of the contempt with which proprietors of mining and other companies are nowadays held by their nominal employees. "The directors have delayed calling the shareholders together owing to the absence in Australia of Mr. G. P. Doolette, the late chairman of the company. Mr. Doolette found on his return to this country that his engagements prevented him giving the necessary time to the company, and on November 27 he retired from the board." We will not trouble to express our opinion of this proceeding, merely observing that the retirement took place about three weeks before the meeting. He might have hung on for that brief period longer if only to save appearances. We gather that the company has been nursing its assets during the prolonged period since the last report was issued, and the directors now speak hopefully of the Middleburg Steam Coal Company and the reconstruction of the Star of the East, and say nothing very exciting about the remaining interests. Including £1,614 for directors' fees, much the biggest item, the outgo for the period to September 30 was £3,848 or £22 in excess of the income, bringing up the total deficiency to £2,256. The company is now pretty well "broke," and another capital reorganisation looks imminent. The last took place in 1903.

Brilliant Central Gold Mining.—The directors' report for the half-year ended September 16 states that development work totalled 1,558 ft., 7,070 tons of stone were treated for 3,972 ozs. gold, which, with the yield from sands and concentrates, produced a value of £19,910, equal to £2 16s. 4d. per ton of stone treated. A small return from tributors raised the gross revenue to £19,926. Mining costs absorbed £16,466 or £2 6s. 7d., leaving 9s. 9d. per ton profit. A dividend of 6d. per share took £2,625, including tax, and £371 is carried forward in reduction

of debit to revenue account, which is thus reduced to £17,872. This figures as an asset in the balance-sheet, but on the other hand there is no item of development expenditure. Nothing appears to be set aside for depreciation. Plant and buildings stand at £13,655, cash £2,078, uncalled capital £12,083. The dividend paid is the first since March, 1906, when 2s. 6d. was paid. Since 1900 £275,000 has been distributed in dividends.

GAIKA GOLD MINING.—Quantity of ore crushed during the financial year ended June 30 was 15,964 tons, yielding 7,878 ozs. or 9.87 dwts. per ton, the value being £31,522. Tailings, &c., produced £344, increasing the revenue to £31,866, but the entire outgo was £32,718, so that a debit of £350 was brought out. Included in the expenditure was development account £9,977, depreciation £2,499, and debenture interest £3,000. Last year there was a deficiency on appropriation account of £1,775, and the directors see fit to write off a further £7,000 for redemption, so that with the past year's loss the total adverse balance is raised to £9,125, while the development account is reduced to £39,664, still a very heavy figure, considering the total of ore reserves. The tonnage developed in the mine at June 30 is estimated at 20,000 tons, averaging 13½ dwts. per ton. In addition there is a large amount of surface rubble supposed to average about 4 dwts. and put at 32,670 tons, a figure thought to be below the true quantity. Since the end of the financial year the ore crushed has been a good deal increased, but the yield per ton is distinctly poorer. The directors are now considering the best means of increasing the capacity of the present plant so as to make it equal to a 20-stamp mill.

NEW ZEALAND CROWN MINES.—Value of the bullion produced for the year ended August 31 was £50,049 and interest and dividends on investments gave £542, making a total of £50,591. After meeting all charges, including depreciation, and £13,774 written off for development, the balance of profit is only £3,256, not a very great result. It is added to the sum brought in, making £5,495 to be carried forward. Immediate prospects do not seem very impressive, mainly because the company has encountered a good deal of trouble from an inrush of water. This seriously interfered with the policy of development recommended by Mr. Daw at the last annual meeting, and while a rich chute of ore has been found on the No. 5 level there is difficulty in opening it up on account of the water which has been met with. Additional pumping is therefore an urgent necessity, and the directors propose to go fully into the question with the general manager, who is coming to London for that purpose. As soon as they are satisfied that a suitable plant can be installed at a cost not exceeding the somewhat limited cash resources of the company, it is proposed to place the necessary orders and rush forward the work with all possible despatch.

TALISMAN CONSOLIDATED.—Shareholders of this New Zealand gold mining company have just received the half-yearly report of the general managers, Messrs. Bewick, Moreing and Co., setting forth the position and prospects of the mine on August 31 last. A good deal of development work has been accomplished during the period, without, on the whole, revealing anything very striking, but the total ore reserves amount to 56,442 tons of an average value of £2 15s. 9d., the total worth being £157,356. There is also a quantity of low-grade ore in the Dubbo section, No. 10 level and in the Bonanza section above the No. 8 level. No estimate has been made of the ore in the Bonanza section below the No. 12 level. Values disclosed at the No. 13 level are described as being of the utmost importance, but until there are rises through it to the level above it would be impossible to estimate the tonnage or value with any degree of assurance, although a substantial addition to the reserves of high-grade ore is expected. Total receipts in the six months were £91,743 and the expenditure £40,193, leaving a cash profit in New Zealand of £51,550. Total tons crushed were 24,013, but the report gives the recovery at 171,827 ozs., which is, of course, quite wrong. No shaft-sinking has been done in the period, but it is desirable to resume sinking as early as possible, and the managers also recommend that the slimes treatment plant should be remodelled

GOLDEN POLE GOLD MINES, LIMITED.—The eighth half-yearly report of this West Australian company, presented to the shareholders at Kalgoorlie on October 15, expresses the regrets of the board that the developments during the period have not been of a very satisfactory character, that with depth the ore body is becoming narrower with a reduction in consequence of the average value of ore reserves. The estimated ore reserves are given as 8,727 tons of a value of 12 dwts per ton, as compared with 9,792 worth 15 dwts. in the preceding half-year. This is no very grandiose position, but the capital, £20,000, is small, and the financial position fairly strong. Any success therefore in prospecting on the other leases held by the company might soon convert a doubtful position into a hopeful one. Bullion produced gross £11,401 and nett £11,216 for the half-year. The battery ran for slightly over three months, yielding 2,691 ozs. of gold. Treatment absorbs £6,878 and general expenses £995, including the very modest item of £46 for directors' fees. This leaves a clear balance of £3,342, but depreciation has been fairly provided for, and plant, buildings, and machinery stand at £14,348, having been reduced by 10 per cent. for the half-year, or at the rate of 20 per cent. per annum, while development raised to £11,246 by £4,587 spent during the half-year is reduced by £3,847 taken from profits. The nett result for the half-year is that £24,934 was brought in and £22,810 is taken out, showing a loss of £2,124. Liquid assets are £5,450. Stores, &c., £1,450, while the company owes sundry creditors £117.

MOUNT MOLLOY.—From the general and mine manager's reports for the six months ended June 30 it may be gathered that considerable development work has been carried out in various sections of the mine. Production was 6,074 tons of smeltable ore and a large quantity of seconds, the former giving about 374 tons of blister copper while the latter has been held for future treatment. Smelting operations had to be altogether suspended during eleven weeks of the period owing to a variety of causes such as the necessity for dismantling the old and erecting a new water jacket furnace, the wet season conditions rendering all traffic impossible and an insufficient supply of flux through shortage of truck accommodation for the railage of the Cardwell ironstone ore. These disadvantages have, since the end of July, been favourably modified, work in all departments is now proceeding satisfactorily with the prospect of like conditions continuing to the end of the year. Profit on operations was £8,059, but dividends of 2s 6d per share were paid during the twelve months under review, absorbing with tax a sum of £14,669, and another 1s 6d since the close of the half-year. Probably further payments might have been forthcoming, but in view of the unsettled condition of the copper market and the prospective requirements for mining machinery, railway construction and rolling stock the directors think it prudent to withhold further distributions pending completion of the works in progress and improved conditions for copper realisation. Liquid assets at the date of the balance-sheet were £70,655 and the nett credit after providing for liabilities £63,572

CASSEL CYANIDE COMPANY.—Shareholders in this concern ought to be happy, and doubtless are. The directors record a further expansion in business for the year to September 11, and state that the market for cyanide has remained steady, with an increasing demand from certain mining centres. The trading profits were £69,727, and £4,670 was brought in, a total of £74,400. General expenses in Glasgow were £5,527, and after writing £20,000 off buildings, machinery and plant there is a balance over of £48,879. From it shareholders get dividends and bonus aggregating 40 per cent., £10,000 goes to reserve and £6,049 is carried forward. The financial position is wonderfully strong. Property account is now written down to £67,025, and against that there is a reserve of £30,000. Sundry debtors owe £50,272, and investments and cash at call are no less than £62,841, while creditors amount to £36,279.

NEW LISBON BERLYN.—Shareholders of this company have just had the first report since the reconstruction, covering a period of almost 16 months to June 30. Mining operations have been mainly confined to the development of the Theta reef on the Frankfort farm, and the ore reserves are put at the stupendous amount of over 17,000 tons, assaying 11 dwts per ton. This does not include pyritic ore, and the ore reserves are being continually increased as further development proceeds. The policy of the board to establish in the first place a large reserve of payable ore at Frankfort has put Lisbon and Berlyn a bit in the background, but individual diggers are at work on tribute with little reward. Additional claims on the outcrop of the Theta reef on the adjoining farm of Rotunda Creek have been acquired at a nominal cost, and prospecting is proceeding with promising results, so it is said. Then the Transvaal Gold Mining Estates Company has been doing some useful prospecting on the neighbouring Vaalbock farm, where Olivine's reef has been located and opened up; and this brings before the directors the probability that this reef will also be found on Frankfort. A decision has been come to in the matter of plant erection, and by the middle of next year it is hoped that everything will be in order and regular crushing can begin. Expenditure to date in South Africa is £19,580, and in London £2,042, while the cash and loans aggregate £8,800.

ROAD BLOCK GOLD MINES OF INDIA.—So this unfortunate concern is really to be wound up and done away with, no further attempt at reconstruction being proposed. It has gone through the process twice, and after work on the original Road Block property was stopped in November, 1904, a prospecting option costing £50 was secured from the Sangh Gold Mines over the Yelishirur block of about 348 acres in the Dharwar district. The option was granted in July, 1905, and was to last for two years, but developments were clearly not sufficiently good to justify the continuance of operations, and at the end of August instructions were sent to India for all underground operations to be stopped. The company's capital is now exhausted, and the concern will be placed in voluntary liquidation without the shareholders ever having seen a single penny returned on their capital.

NEW KEMPINKOTE GOLD FIELD.—Operations on this company's original property have long since ceased, and it is now engaged in exploiting an adjoining property, an option on which has been secured from the Gold Fields of Mysore and General Exploration, another flourishing affair. The option was for two years from July 11, 1905, but an extension for a year was readily acceded to. The Mysore company is carrying out the work, and a good deal seems to have been accomplished during the period under review. The company is looking out for a continuation of the rich ore chute in the M Taggart section of the Mysore mine, and will, we trust, find it. Balance of expenditure over revenue in the 18 months to September 30 was £4,301, making a total to date of £34,053. Allowing due to creditors is £4,645, and debtors and cash come to £8,574, so that the resources are getting short

HUTTI (NIZAM'S) GOLD MINES.—Gold sales in the year to September 30 were £48,842, after deducting royalty, and other items produced £570, making £49,411. After meeting expenditure of all kinds there remains £10,047 as nett profit. In addition, £5,083 was brought forward, increasing the available income to £15,132, from which the directors provide £8,250 against development and depreciation and £350 for income tax.

Out of the sum still left it is proposed to pay a dividend of 15 per cent. or 5 per cent. less than last time, but in view of the falling off in the value of the 1,240 ft. south, the extra cost of fuel and material and the necessity of keeping on hand some capital for the further development of the No. 3 shaft, the board is convinced that this policy is sound. Ore reserves are about the same as a year ago.

Sulphide Corporation.—The annual report of this concern caused some disappointment, owing to the absence of an ordinary dividend, but if all goes well shareholders' patience may be rewarded in the not distant future. Last twelve months to June 30 the gross profit, after providing £15,228 for special expenditure due to the creep and £15,386 for amortisation, was £135,130. That is a good figure, but the nett profit was the ridiculously small amount of £777 because no less than £113,883 was set aside for capital expenditure and £20,468 went for debenture interest, depreciation on stores, guarantee to Central Zinc Company, and adjustment of spelter price. Credit brought in was £133,465, making £134,242, and after meeting the preference dividend, requiring £55,000, it is proposed to carry forward the remaining £79,242 to the current year. Happily this heavy capital outlay is now at an end, and the special outlay for underground repairs due to the creep should not recur to any serious extent. The chief capital expenditure has been in connection with the new mill, and despite initial difficulties confidence is expressed that the plant will materially enhance the company's profits. Prices of metals stood the company well during the past year, but there has been a heavy reaction since, which may delay the full realisation of hopes in the matter of profits. Debenture stock to the amount of £79,600 matures at the end of 1907, and satisfactory arrangements for its reissue for a further period of five years have been made. The company is rather heavily in debt, but its liquid assets are considerable.

Queensland Copper Company.—We learn from the annual report of this company, made up to July 31, that smelting operations were continued without interruption 17,235 tons of ore, an increase of 3,380, being treated, while the cost per ton of £1 9s. 2d. was the same. Better working results were obtained from the new blast furnace installed in October, but the saving in that respect was offset by the higher cost of fuel and flux. Matte produced averaged 56 per cent. copper, and returned on final assay 1,812 tons copper, 94,082 ozs. silver, and 3,223 ozs. gold. Nett profit came to £36,143 and £12,621 was brought in, making a total of £48,764. From this the preference shareholders have had 10 per cent. and the ordinary 8½ per cent., leaving £29,278, subject to directors' commission. It had been hoped that another distribution would now have been possible, but the upset in the copper market renders that course inadvisable. Should the situation continue to improve, say the directors—we have not noticed any particular improvement—they hope to be able to resume the payment of interim dividends during the period now current. Smelting ore in sight is estimated at 30,000 tons, an increase on the year of 11,000 tons. The financial position looks fairly strong.

Manica Copper Development.—This company after considerable negotiations has made arrangements for a loan of £10,000 secured by debentures, one-half carrying 6 per cent. interest, and redeemable in three years or earlier at the option of the company having been subscribed in Amsterdam. About £5,000 is to be expended forthwith in the purchase of a complete outfit of mining machinery, including a high-speed pneumatic battery and concentrating plant capable of treating 500 tons of ore per month. It is hoped that the new plant will be in operation and regular crushing commenced about April next. Meantime the latest advices from the manager show that the reserves of copper ore, which already amount to some 12,000 tons, are increasing satisfactorily. In particular the development of the important gold discoveries in the lower levels is proceeding favourably, the manager reporting that the auriferous calcite veins are becoming more numerous. It is proposed to convene a general meeting during January, in order to give the shareholders an opportunity of hearing a full statement by the manager personally regarding the position and prospects of the mine. A balance-sheet to December 31, 1907, will also be submitted to the meeting.

Kinta Tin Mines.—Gross income for the year to June 30 was £23,543, and after deducting working expenses and administration in London and the Malay States, besides other small items, there is a balance over of £14,607. Add £1,480 brought in and the total available is £16,087, from which the shareholders get dividends aggregating 12½ per cent., further remuneration to the directors is £430 and £8,157 is carried out to the current year. The company has purchased the adjoining property of about 312 acres, as already reported to the shareholders, the price being £7,000 and 7 per cent. royalty on the tin won. Against the latter an advance of £5,833 has been made, to be deducted from the royalty as it becomes due. This means a total payment of £12,833, of which £7,000 has been borrowed from bankers on the personal security of the directors and the balance derived from revenue account. This has meant some sacrifice in the way of dividends, but the directors think the benefit will be felt in the near future. The company is modestly capitalised, and will, we trust, continue to do well.

Copiapo Mining Company.—This company's mining and farming operations for the year ended June 30 resulted in a loss of £622, besides which expenditure in London, difference in exchange, &c., took £4,585. So that allowing for trifling sums on account of interest and transfer fees, there is a total loss of £5,090, increasing the deficiency to date to £7,826. Up to December, 1906, the mine was worked under the old system of the late management—namely, by picking and sorting the ore—and in that period the ore produced was disposed of to the smelting establishments in Chili and England, the total being 3,341 tons with average copper contents of 10.85 per cent. From January the sales of ore were suspended, and the work of cleaning out the old workings, extending development and effecting the various improvements necessary for an increased output were taken in hand. During these operations, up to June 30, 4,506 tons of ore with an estimated copper average of 5 per cent. were mined, and some promising ground opened up, which has enabled the manager to report an increase to 51,315 tons in the reserves of ore averaging 7.4 per cent. copper. The erection of the new smelting plant has been delayed owing to the heavy demands on shipping to Chili and scarcity of labour, both due mainly to the rebuilding of Valparaiso, but strenuous efforts have been made, and news of the blowing in of the furnace is daily expected.

Town Properties of West Australia (1905).—Business was not exactly brisk for this company during the year ended July 31, the revenue under all heads being £5,676, including proceeds of property sales £2,726, a figure arrived at after deducting approximate cost. Expenditure in Western Australia came to £2,010, and in London to £1,112, other debits consisting of general maintenance £379, cost of operating tramway £600 (presumably loss on working, there being no details of revenue), and commission on land sales £486. Balance of profit is £1,024, but debenture interest is £3,430, and the shareholders are faced with a debit on the year of £2,406, increasing the total deficiency to £7,690. Additions to property account in the year were £3,301, and £15,329 was deducted on account of property sold, leaving the balance-sheet value of the possessions at £42,281. Debentures to the amount of £4,305 were redeemed during the year, and another £10,755 have been acquired since the accounts were closed. Debtors, bills receivable, loans and cash make up a comfortable total of £37,103, and liabilities are quite trifling, but we note a reserve of £8,618 in respect of sundry debtors and bills, which looks significant.

Company Reports and Balance Sheets.

**** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

Canadian Bank of Commerce.

Figures only are supplied relating to the affairs of this large Canadian bank, but they are interesting figures, and deserve recital. The nett profit for the year ended November 30 last was only £2,307 higher than for the previous year at £360,072, but then there was a great jump in the previous year's figures, so that it would have been something creditable to have maintained the total then reached. The balance brought forward was £9,183 more at £21,280, so that altogether the distributable amount was £11,490 more at £381,351. Out of this 8 per cent. per annum has been paid upon the share capital and £71,918 is written off bank premises as against little more than £70,000 a year ago. The same amount of £6,164 has been again transferred to the company's pension fund, being the annual contribution, and after all these assignments have been made £138,886 is left to be carried forward. A year ago £102,740 was placed to reserve, but no addition is made thereto this year, the whole surplus profit being carried forward, and it is nearly £15,000 larger than the carry-forward of the previous year, plus the addition then made to the reserve. In the balance-sheet there are no changes of a kind that give bases for inferences worth setting out. The note circulation is just £7,519 up at £1,897,761. Deposits not bearing interest are down £344,307 to £4,305,056, and deposits bearing interest are up £321,400 to £13,580,093, these changes being quite what might be expected when money becomes dear. Banks then naturally bid for deposits at interest, and everyone who has any spare cash transfers it from current account to deposit. The total of the deposits are thus only about £23,000 worse at £17,885,149, so there was no real curtailment of credit. No change has been made either in the paid-up capital or the reserve, and the balances due to other banks in foreign countries are not much altered either—about £23,000 down at £314,238. Amongst the assets coin and bullion show an increase of £333,204 at £1,163,640 and Dominion notes are less by nearly £112,000 at £1,107,611. The deposit with the Dominion Government for security of the note circulation has risen by £4,634 to £92,466, but the notes of and cheques on other banks show a reduction of £129,606 at £766,537. Balances due by agents of the bank and other banks in foreign countries are also higher by £85,919 at £591,538. Call and short loans also show a rather suggestive increase of £759,074 at £2,608,676, but investments in Government, Municipal and other securities show a decline of £272,625 at £1,001,647. The assets in the shape of current loans and discounts amount to £15,631,494, which is a decrease of £663,690, a sum that nearly balances the increase in the call and short notice loans. Bank premises are entered at £290,329, exclusive of real estate £13,168, and mortgages £7,037. The aggregate of the balance-sheet is £23,359,631 or little more than £26,000 less than a year ago.

New Tamarugal Nitrate Company.

Another great leap forward took place in the profits of this company for the year ended July 31 last. They came to

£85,638, and after deducting London expenses and the reserve for income-tax, the balance left was £27,604 larger than that of twelve months back at £81,892. Interest on second debentures took £1,607 more at £3,750, but including the balance of £2,141 brought forward the free revenue was still £50,882, out of which an interim dividend of 2½ per cent. was paid in the middle of May last. A further 7½ per cent. is now recommended, all tax free, making 10 per cent. for the year against 8 per cent. paid last year. The full 4 per cent. interest is also distributed on the income bonds, taking £4,972, and £20,000 is added to the reserve fund. Even then £4,616 remains to be carried forward. During the year £1,150 of first mortgage debentures have been bought in and £18,850 were drawn for redemption on August 1 last, leaving only £25,880 outstanding. Manufacture was begun with the new maquina at La Palma in April, and is going on well. A profit has been taken on 561,000 quintals of nitrate sold. Very few changes have taken place in the balance-sheet, and the only points that seem to call for notice are an increase of £6,457 in sundry creditors and a decrease of £1,652 in sundry debtors, the former being now £24,385 and the latter only £3,777. The company, however, had £20,000 due to it on bills receivable at the date of the balance-sheet, and this is well because there was very little cash indeed, apart from the £21,421 held in London to meet debenture interest and drawn debentures. There are only £75,000 of second mortgage debentures outstanding. It is to be feared that the current year will not turn out so well, unless the strike in the nitrate fields comes to a speedy end.

Pacific Nitrate Co., Limited.

Scarcity of labour and congestion in Port Antofagasta are again blamed for the delay in erecting machinery. However, the Oficina "Aurelia" worked from November, 1906, to June 30, 1907, and "Celia" during May and June this year, and up to June 30 earned profits of £12,181. London expenses from June, 1905, the date of the company's inception, amounts to £3,796, and debenture interest for same period to £20,293, leaving a debit balance of £11,908 to be carried forward. An additional £43,154 has been spent on plant, &c., raising property account to £388,603. Animals, carts, &c., cost £12,185, furniture £4,204, caliche at cost £8,511, stores £19,119, sundry debtors owe £3,725, and cash is reduced to £802, but nitrate sold but not shipped will bring in £25,582. Preliminary expenses still show at £12,054. On the other side the company owes £136,693, to Valparaiso bankers £116,555, and to creditors £20,138, including £8,281 for debenture interest, payable July 1, 1907. It will have to make haste.

Ridgways, Limited.

This business suffered a set-back during the twelve months ended September 28, probably because prices of tea have ruled higher, and nett profits fell off by £696 to £42,700. At the same time interest charges were £431 heavier at £1,488, and although £148 less at £3,882 was written off for depreciation and a small saving was also effected in administration expenses at £3,767 the nett balance was £937 down at £33,563. With £892 brought in, the disposable surplus amounted to £34,456 compared with £35,155, and after placing £3,356 or 10 per cent. of the distributable profits to reserve and paying preference dividend the ordinary shares receive 8 per cent. or ½ per cent. less, and the sum carried out is increased to £1,038. Property taken over at the formation of the company remains at the original figure of £330,000, but further additions were made to the property since acquired, investments, &c., with the result that the total outlay, less realisations and depreciation, shows an increase of £17,125 at £503,030. Against this the reserve now stands at £34,178, and of course is all in the business. Liabilities to depositors have been reduced by £3,167 to £29,238, but sundry creditors are £29,593 up at £120,957 against an increase of £11,264 to £105,892 in sundry debtors, while an addition of £7,768 to £22,971 in cash balances is largely neutralised by a drop of £7,166 to £71,520 in stocks on hand.

United Realization Company.

It continues to disappoint everybody and to prove what a daring emancipated gamble Jabez Balfour finance was. In the year ended October 31 last, including £2,000 representing a 4 per cent. dividend on the company's holding in Whitehall Court shares, the entire income was less than £2,200, and as the current expenses, including 2 per cent. paid on the company's debentures, swept away £8,775, it followed that the deficiency for the year was £6,576, and the aggregate deficiency, after allowing for £154,775 received on assets sold in excess of book values and in excess of realised losses, is £303,881. That there will ever be anything left for the holders of the 600,000 £1 shares of the company seems to be most unlikely. But the fault does not lie with this company, whose working costs are most moderate.

R. and J. Pullman.

The old proverb, "There is nothing like leather," does not seem to be invariably true; at any rate, the board of this company makes a lamentable show for the past year. The nett profit is hardly £800, and including £285 brought forward the free balance amounts in all to only £1,174, so neither the preference nor the ordinary shareholders get any dividend for the year ended September 30 last, and the founder shareholders are quite out in the cold. It is all the fault of the condition of the leather trade, the board says, and in spite of its continued and strenuous efforts this is the best they can attain to in the circumstances. To make it worse, no allowance has been made this year for depreciation, and it is candidly admitted that a reduction in capital is in sight. Even the pruning knife of the reorganiser will hardly remedy the mischief in the present state of the trade. The company is really suffering from the mistakes, shall we say? of its origin, and from excessive dividend payments in past years. The business was capitalised at £213,000, including £3,000 in £1 founders' shares, which have received in the twelve years or so of the company's history upwards of three guineas in dividends. These dividends ought never to have been paid, and the 7, 8, 10, and 12 per cent. paid formerly upon the ordinary shares were never fully earned. With a capital of £70,000 or perhaps £100,000, the company might have done well by building up a reserve, keeping down dividends, and strengthening its position in all respects. The other course was followed regardless of consequences, and now it is in ruins. Yet during the past year £1,310 was spent on capital account, bringing the value of the goodwill, freehold and leasehold properties, plant, machinery, &c., up to £125,165. Are they worth the odd £53,000, and what is the real value of the stock-in-trade entered at £56,906? Not only does the company possess no reserve, but it owes about £19,000 to various creditors, including £8,010 directly borrowed. To be sure, the nett amount due to it by sundry ledger debtors is £25,554, and we hope the £1,806 deducted for discount and doubtful debts is a sufficient amount. A year ago the preference dividend for the year was paid in full, together with 1 per cent. for arrears, and now there is nothing for anybody. Cash in hand and bills receivable though foot up to £3,350.

Army and Navy Investment Trust.

In its year ended November 30 last this company earned altogether £56,722, of which £55,020 came from dividends and interest on investments. From this £15,200 was deducted for interest paid and accrued on the company's debenture stock, and sundry other charges, including £1,649 for management and £1,350 for trustees' remuneration, brought the entire charges up to £18,376, leaving £38,346 to be dealt with, to which £935 brought forward falls to be added. An interim dividend at the rate of 5 per cent. on both the preferred and deferred stocks was paid for the half-year ended May 31 last, and out of the balance the preferred stock gets its full 5 per cent., while the deferred receives a distribution at the rate of 10 per cent. per annum, making 7½ per cent. for the year, leaving £930 to be carried forward. A complete list of the securities is printed with the report and represents a most varied assortment. No single investment is for a large amount, rarely as much as £10,000, although the company does hold £14,500 in the mortgage bonds of the Nitrate Railways Company, and £10,000 in Cordoba Central Railway, Central Northern section first debenture stock, together with £19,250 in Mercantile Investment and General Trust deferred stock. It is interested in other trust company securities and notably in the deferred stock of the Guardian Investment Trust, of which it possesses £11,950 worth, together with £3,500 in that company's 4½ per cent. preferred stock. Necessarily many of the investments are of a more or less speculative description, but their wide distribution affords a certain compensation in times like the present, and, taken altogether, we think the list a good one, but whether the depreciation allowance of £215,705 is sufficient to cover the book loss at the date of the balance-sheet the directors do not say. The balance-sheet, however, is a clean one, and the company has no floating debt. On the contrary, it has £15,000 out on loan, besides £4,358 lying at its bankers.

Waterlow and Sons, Limited.

Once again the directors of this fine business have good grounds for congratulating the shareholders on the results achieved during the year ended September 30. Nett profits improved by no less than £5,485 to £148,742, and after meeting the dividends on the preference and preferred ordinary shares at the rates of 3½ and 6 per cent. respectively, the surplus remaining was £127,442. With £5,769 from the previous account the available total was brought up to £133,211, out of which another £30,000 is transferred to reserve and the deferred shares get an additional 1 per cent. at 15 per cent., leaving £8,411 or £2,642 more to be carried forward. The balance-sheet is hardly so full as shareholders have a right to expect from a company of high standing like this one, but so far as it goes the exhibit is undoubtedly one of great strength. Stock-in-trade, plant, machinery, leasehold and freehold properties, goodwill, &c., after deducting an unspecified sum for depreciation and replacement of plant and machinery, show a small increase of £1,550 at £1,207,189, but, on the other hand, the reserve is now up to £300,000. Floating liabilities have risen by £10,854 to £94,027, but debtors are £21,806 higher at £160,861, and although investments have been reduced by £20,000 to £80,231, the decrease is much more than made good by the addition of £54,543 to the cash balances at £360,640.

Aron Electricity Meter, Limited.

Gross trading profits of £32,550 and sundry receipts from interest, &c., £1,178 give a total revenue for the year ending September 30 of £33,728. After allowing for depreciation £4,528, debenture interest £2,280, depreciation on investments £1,122, without saying if this brings them to market prices, maintenance of patents £631, &c., the balance over is £20,952. From this goodwill and patents reserve is credited with £9,000, and 9 per cent., including 3 per cent. of arrears, is paid on the preference shares, leaving £6,228 to be carried forward. Accumulated arrears on September 30 amounted to £24,070, or about 3½ years' dividends. Goodwill, patents, land, &c., are £1,234 higher at £185,880, the depreciation allowed being that much less than the additions for the year, and the auditors suggest no as to further provision being found necessary towards expiry of patents is sufficiently expressive. Stocks of meters, &c., appear high at

£56,260. Trade balances are favourable to the company, debtors at £46,220 showing an excess of £35,600 over creditors. Investments figure at £13,362, loans against securities £10,500, and cash £9,530 afford a fair working capital. Liabilities not already treated are insignificant beyond £3,094, fees and commission contingent on payment of preference dividend. The directors report a satisfactory progress in every direction, and the necessity of extending factories to cope with increased business.

Liverpool Warehousing Co., Limited.

The report of this undertaking for the year to September 30 contains not a word as to the condition of business within the period, but in one or two directions it was not quite so encouraging as in the previous twelve months. The gross storage rents, profit on porterage, cartage, and other receipts were £1,479 less at £107,826, while the expenses were a good £1,200 heavier at £64,992. Interest on debenture stock and mortgages amounted to £15,202, leasehold redemption takes £550, and £2,000 is written off machinery, plant, &c. This means a nett balance of £32,477 or almost precisely the same as before, due to the increased sum of £7,096 included in the total. Therefore the directors again pay preference dividend for eighteen months, bringing the payment up to March 31, 1905, and carry forward £7,665. Additions to property were £11,366, increasing the book value of the premises and goodwill to £1,033,033, a nice sum to stand without backing of any sort except the free insurance fund £11,606 and leases renewal account £7,431. Some of the property has been mortgaged for £11,276 and £1,035 is owing to bankers, while £23,354 is due to sundry creditors against debtors of £44,748. There is an investment of £3,500 in Mersey Dock Board 2¾ per cent. annuity and the cash held is £4,013, with £32,971 to be provided for dividend and interest payments.

Adelaide Electric Supply Co., Limited.

A further addition of 19,258 8 c.p. lamps was made to this company's Adelaide system during the year ended August 31, bringing the total up to 94,462, but the profits therefrom only increased by £324 to £9,830. The Port Adelaide undertaking, however, yielded a profit of £201 compared with a loss of £57 for the previous twelve months, and with £418 or £137 less from interest and transfer fees the total revenue was £444 up at £10,448. Head office and other charges took an extra £249 at £1,130, but the balance brought forward was £620 larger, and the disposable total, therefore, amounted to £10,112 compared with £9,297. Preference dividend having been met another £1,600 is put to depreciation account, and £526 is written off suspense account for cost of preference issues, after which the ordinary shares again receive 2½ per cent., leaving £830 to be carried forward. In pursuance of their policy of including the residential district surrounding the City of Adelaide in the company's field of operations the directors are gradually extending the supply mains, and during the year spent £22,266 on extensions and additions. This brings the cost of the undertaking up to £211,188 against which the depreciation fund amounts to £2,000 only, and the auditors seem a little doubtful about the adequacy of this provision. The company, however, appears to enjoy the confidence of the local investor, as an issue of 6,000 £5 preference shares offered in August was all subscribed in Adelaide. On these £2 per share had been called up by the end of the year, and with instalments paid in advance the issued capital now stands at £219,330. The cost of the issue was £2,402, and as the whole £30,000 was not available the directors had to draw pretty heavily on their cash balances, which are £9,558 lower at £11,041, while floating liabilities of £3,801 exceed the sum due from sundry debtors by £766. Suspense account, less the amount now written off, comes to £6,000, and at the present rate will take another six years to wipe out.

Willer and Riley, Limited.

Apparently the agencies for some of the largest butter and cheese factories in Australasia, which the directors announced that they had secured a year ago, have proved fairly remunerative, as nett profits for the twelve months ended September 7 were £2,255 up at £19,736. Including £2,352 or £657 more brought forward, the disposable total was £2,912 larger at £22,088, an increase which the directors seem to think justifies them in departing from the prudent policy adopted last year. Accordingly they raise the dividend on the ordinary shares from 6 per cent. to 7, and, having transfered another £4,000 to reserve, they add £1,961 to the sum carried out, making it £4,313. The company's financial position, however, is little, if any, stronger, and it might perhaps have been advisable if the desire to pay a larger dividend had been restrained for another year or two. Goodwill, trade marks, fixtures, &c., in spite of the depreciation allowance, is virtually unaltered, and at £112,906 considerably exceeds the ordinary share capital, while freehold premises have been increased by £788 to £9,254, so that the reserve of £17,000 does not seem adequate. Floating liabilities are £59,868 lower at £182,469, which is so much to the good, but the decrease has only been brought about by reductions of £33,854 to £151,438 in book debts, advances on consignment and bills receivable, £5,793 to £150,237 in stocks and £12,264 to £11,597 in cash. These figures rather look as if the volume of business had shrunk, but the directors announce that they have secured additional agencies "in the colonies, the Argentines, &c.," which will have the effect of increasing the turnover of the business by about 40 to 50 per cent.

Bowden Brake Co., Limited.

This company has adopted the policy of directly catering for the trade in brakes among manufacturers instead of relying almost wholly upon the public trade in replacements, and as this change has put forward the trading season, the date of making up the accounts has been altered to August 31. In connection with the change, the directors have purchased the business of the Barford Manufacturing Company, paying for it partly in cash and partly by the issue of £4,710 in shares. At the same time the Birmingham Brake Company has relinquished its licence from this company, and its stock has been taken over. All these changes upset the ordinary routine of business, and as all incidental expenses were met out of revenue, gross profits for the eleven months to August 31 amounted to £10,310 only, or a drop of no less than £6,129 compared with the preceding year. Expenses were £2,665 less at £7,680, but after providing for debenture interest and directors' fees, the nett income, including £253 brought forward was £3,825 down at £2,440. A year ago £2,000 was taken from reserve to help the company to pay a dividend of 20 per cent., but such a course cannot be followed too often, and the directors content themselves with a distribution at the rate of 5 per cent., carrying forward £536 or £283 more. Licences, patents and goodwill have been increased by £7,044 to £12,245, probably because of the above-mentioned purchases, but the reserve stands at £15,409. This is mostly represented by investments, which are valued at £18,694 compared with £31,069 a year ago. Creditors are a few hundreds lower at £2,726 against a drop of £4,268 to £5,441 in sundry debtors, while cash comes to £4,384. An arrangement has been concluded whereby the royalties payable to the E. M. Bowden's Patents Syndicate have been commuted, and there remains £2,400 of the agreed amount still to be written off. Since the closing of the accounts the pressure of orders has been such as to force the directors into the purchase of ground and erection of buildings at Tyseley, Birmingham, which they hope to occupy by January 1, when the London works will be removed as soon as possible.

Palmer Tyre, Limited.

The directors of this concern are men of few words, and as practically all the shares are owned by the India Rubber, Gutta Percha and Telegraph Works Company, a balance-sheet is apparently rendered unnecessary. Business seems to have been better in the twelve months ended September 30, as profits showed an increase of £2,836 at £7,684, but the dividend of 5 per cent. is not improved upon as an extra £2,000 at £3,500 is added to reserve, and the sum carried out is raised from £962 to £1,397. These figures, however, are subject in both cases to deduction for directors' fees, which are voted at the meeting, and for some years now have amounted to £750.

The Blaenavon Co., Limited.

This South Wales coal and iron company has had a far better year than would appear from the balance-sheet alone, which shows a nett profit for the year ended October 5, after providing for debenture interest and directors' fees, &c., of £15,462; for the report mentions improvements, additions and alterations effected out of revenue at a cost of £62,000, and this follows a similar expenditure of over £50,000 last year. The carry forward from last year was £28,405, making £43,868 available. Out of this 10 per cent. on the ordinary shares absorbs £12,000 and the preference dividend £3,000, leaving £28,868 to go forward. Considering the past vicissitudes of the company and the doubtful outlook for the coming year the conservative policy is highly commendable, but with such an excellent balance-sheet it is regrettable that the policy of the directors is opposed to a complete disclosure of a working account which permits of such generous provision for a rainy day. Works and property are taken into the balance-sheet at £185,109 less £4,900 depreciation or £180,209 nett. Convertible stocks figure at £68,402, a considerable reduction of this item accounting for the large cash balance of £50,958. Bills receivable £2,015 and debtors £65,032 against bills payable £15,818 and creditors £43,680 show £8,500 in favour of the company. Electric haulage is now installed in one pit, and plant for this purpose has been arranged for the whole of the collieries. The consent is being asked of the debenture holders to a scheme for wiping out the liability on the shares and splitting them into a denomination of £1, and at the same time announcing that the latest valuation of the property places it at five times the amount of the debenture issue, and this on a very conservative basis.

Nantyglo and Blaina Ironworks Co., Limited.

The exceptional prosperity of the coal trade helped this poor old derelict to some extent during the twelve months ended September 30, as the output from its properties increased by 102,401 tons to 1,765,369 tons. Royalties, wayleaves, &c., less £7,121 for rates and taxes, expenses at works, and £500 written off Coalbrookvale wayleave purchase, yielded £40,634, rents gave £4,456, and with £734 from interest and transfer fees the total income was £45,824. Of this general and law charges absorbed £2,096 and debenture interest £2,755, and after writing off £10,064 for depreciation the nett profit was £30,908. With £28,874 brought in the directors had £59,783 at their disposal, out of which they have paid two instalments on account of arrears of dividend on the preference shares, amounting together to £5 10s. per share or 10s. more than was paid for the previous year. During the year £2,000 drawn bonds of the second mortgage 4 per cent. loan were paid off, together with £6,500 second mortgage and £2,500 third mortgage bonds surrendered. The balance of the second mortgage bonds, amounting to £8,350, are redeemable on October 1, 1908, and holders will be invited to surrender their bonds at an earlier date, if desired, while the £53,650 of the third mortgage bonds are redeemable and will be paid off on June 1, 1908, or earlier, as far as funds in hand will permit. These repayments will clear the air considerably.

but the company will still have a very long way to go before it reaches even a comparatively comfortable position, as arrears of preference dividend outstanding on September 30 were no less than £555,208. Apart from the debentures above mentioned, the liabilities of the company are exceedingly light, while it has £14,847 due to it by sundry debtors, £32,562 in cash and £6,008 invested in National War Loan, taken at 98½. Property, less the £10,000 written off for depreciation of coal taken from the freehold, is valued at £523,601.

NEW WESTMINSTER BREWERY CO., LIMITED.

Gross profits fell off by £993 to £66,893 during the year ended October 9, and at the same time rents yielded £1,252 less at £21,570. On the other hand, however, rents payable by the company were reduced by £1,245 to £11,560, and with transfer fees a trifle down at £13 the total income showed a decrease of £1,003 at £76,916. Against this £1,116 less at £13,461 was provided for wear and tear of plant, &c., and depreciation of leases, but repairs to brewery, &c., took £438 more at £4,370, and as other charges were increased the total expenditure came to £39,864 or £177 more. A reduction of £507 to £1,015 in the compensation levy left nett profits £673 down at £36,037, but with a considerably larger balance of £3,896 brought in the disposable total was actually £1,036 better at £39,933. Out of this a dividend of 8 per cent. is again paid on the ordinary shares, and another £7,000 is written off as a special provision for sundry depreciations, after which it is proposed to grant £1,000 to Mr. P. C. Gates, K.C., on his retirement from the board after 33 years as chairman of the company, and to carry forward £3,933. Property account has been reduced by £12,966 to £365,191, of which £3,570 at £132,529 is in freehold beer and public-houses, £8,396 at £217,690 in leaseholds and £1,000 at £14,972 in leasehold brewery and farm premises. These items, we are told, are taken at their several book values, and are subject to trade depreciation, but the directors do not think it necessary to disclose how much of the decrease is due to loss in the three licences extinguished a year ago. At the last Brewster Sessions another of the company's beerhouses was referred for extinction under the Act, but the compensation payable has not yet been settled nor the house closed. In connection with the decrease in property account it is pleasant to note that secured loans have been paid off to the extent of £18,178, leaving £41,564 outstanding, while deposits are £4,925 down at £30,310. A drop of £13,166 to £119,014 in loans granted by the company has been accompanied by a reduction of £3,196 to £17,375 in the suspense account, but trading accounts are still very much against the company. Liabilities are £1,608 up at £15,827, while debtors amount to no more than £7,831 exclusive of £2,422 for rents, cash comes to £3,234, and stocks although £979 up are still small enough for the business done at £15,396.

NORTH-EASTERN BREWERIES, LIMITED.

This company, which has an issued capital of £525,000 and a debenture debt of £366,700, owns breweries at Sunderland, Stockton-on-Tees, Burton-on-Trent, and Spennymoor, so that it is a fairly important undertaking. Like so many of their fraternity, the directors are blowing the war trumpet against licensing reform, and with their report for the year ended October 31 have issued a reprint from the *Times* of the oratorical efforts of Mr. Stanley Boulter. Fortunately for the shareholders, it is a separate document, and in the report itself the directors content themselves with urging upon shareholders "the desirability of using any influence they may have in resisting the foreshadowed hostile legislation." As regards the year's operations, the directors report that the business continues to be of a satisfactory character, and its progress to be well maintained. No real profit and loss account is submitted, but the directors state that £12,494 was spent out of revenue on maintenance of the properties, and after providing for all expenses and establishment charges the nett profits amounted to £88,712. Including £16,844 brought in the disposable total was £145,556, of which directors' and auditors' fees and managing director's salary took £2,650, debenture and other interest came to £16,045, and after writing off £5,578 for depreciation of plant and £3,256 for compensation fund £83,285 was left. Preference dividend having been paid, the ordinary shares receive a distribution of 8 per cent. for the year and £15,000 is added to general reserve, leaving £17,527 to be carried forward. Additions to property, less sales, compensation received and amount written off in respect of lost licences, cost £4,508, bringing the total up to £1,002,035, and against this the reserve, which the auditors tell us includes the provision for amortisation of the long leaseholds, will now stand at £150,000. This represents nearly 15 per cent., and as all the short leaseholds were written off a year ago the proportion seems good. Fixtures and fittings are valued at £14,780, and horses, carts, &c., at £14,543, and as stocks are fairly large at £75,518 the company has to rely rather freely on credit. Loans amount to £24,104 and sundry creditors including accrued debenture interest to £57,999, while on the other hand debtors owe no more than £17,110 and cash comes to £33,860, out of which the final dividends on the preference and ordinary shares will require £27,208. We are glad to note that the directors evidently do not believe in increasing their business by lending to customers and that the asset under this head is small at £6,036.

HUGGINS AND CO., LIMITED.

The spurt in trading profits in the year ended September 30, 1906, could not be still further improved upon during the past twelve months, and profits on brewing were a mere trifle of £87 up at £2,808. At the same time rents gave rather less at £3,682 and interest and transfer fees fell off by £778 to £33,176, with the result that the total income was actually £725 smaller at £109,727. Maintenance and depreciation took £13,331 of this and charges on trade rose by £1,143 to £42,578, but debenture and other interest absorbed £748 less at £23,482, leaving a decrease of £1,201 in nett revenue at £27,534. Adding £2,340 or £736 more brought forward, the available total was £29,874 against £30,339, but £350 has to be set aside for the amount accrued under the compensation levy, and after paying the preference dividend, the directors, in order to repeat last year's distribution of 1 per cent. on the ordinary shares, have to reduce the amount transferred to reserve by £500 to £1,500 and carry forward £316 less at £2,024. Freehold and leasehold properties have been increased by £7,933 to £515,090, and goodwill remains at the old high figure of £287,199. On the other hand, liabilities on bank loan, mortgages and deposits have been reduced by £17,508 to £80,109, apparently out of funds provided by the repayment of loans to customers, which are £24,541 down at £657,930. Creditors are light at £15,641, but exceed book debts and rents by £1,898, while stocks come to no more than £17,324 and cash is trifling at £4,002. A further loss of £2,010 arising out of depreciation of investments has been written off the reserve, leaving that fund, with the present addition from reserve, some £500 down at £21,059.

CHESHIRE'S BREWERY, LIMITED.

A very modest improvement of £118 to £37,147 was shown in the nett profits of this company for the twelve months ended September 30, but a larger balance of £9,244 was brought forward. The disposable total, therefore, came to £46,391 or £990 more, out of which the dividend of 15 per cent. is repeated and another £15,000 is transferred to reserve, leaving £10,234 to be carried out. Brewery property has been reduced by £732 to £36,700, but £23,683 was added to freehold and leasehold houses and licences against £4,055 written off, making a nett increase of £19,629 at £426,109. The reserve fund, however, now amounts to £145,000, or over 31 per cent., and the position seems good. Mortgages and secured loans have been reduced by £1,644 to £80,197, but sundry creditors are £819 up at £29,979, while, on the other hand, stocks show a small decrease at £20,948, sundry debtors owe £2,079 less at £20,087 and cash has dropped by £428 to £12,224.

SCRASE'S BREWERY, LIMITED.

There are several points in this company's balance-sheet for the year ended September 30 which should be looked at by its shareholders. A dividend of 12½ per cent. is excellent, and this is the third year at that rate, but the figures do not show a strong position. We find the usual lumping together of freehold and leasehold premises, plant, fixtures, and rolling stock into one sum of £235,241. Stocks amount to £15,722, investments stand at the striking total of £220, and there are two items, leasehold redemption fund £1,621, and renewal fines account £346. This last item is being gradually written off, £74 having been deducted out of the past year's profits, but what is the form of this leasehold redemption fund? Trade debtors, less discount and reserve for bad debts, come to £31,721 against liabilities to creditors £13,254, but there is an overdraft and loan from the bank of £14,446. Cash in hand amounted to £917, but cheques not presented figure at £853, so the loose money is small. A reserve fund of £30,000 also appears on the debit side of the account, but it is merely a book entry with no free assets to represent it. On capital account the liabilities are £150,000 in 4½ per cent. debenture stock and only £60,000 in preference and ordinary shares. It does not therefore require a large sum to pay a 12½ per cent. dividend, but none the less it would be better in the long run for the company to put its finances in better shape. A concern that can earn £14,150 in a year ought to be able to build up a strong position.

EDINBURGH UNITED BREWERIES, LIMITED.

Notwithstanding the unfavourable summer season the sales for the year ended October 31 again exceeded those of the previous twelve months, and nett profits were £1,055 larger at £18,076. After providing for general charges, including £450 for directors' fees and writing off another £1,500 for depreciation, the surplus was £13,025 or £1,002 more but £1,327 was brought in against £1,683 a year ago, so that the improvement in the disposable balance is only £645 at £15,252. The increase has not been sufficient to allow the directors to revert to the old scale in providing for upkeep of properties, plant, &c., and for depreciation, which the auditors say have been charged on the same basis as in 1906. It was not even sufficient to enable them to do more than pay another six months' dividend on the preference shares, with an increase to £1,072 in the sum carried forward. The preference dividend is, therefore, now 2½ years in arrear, and it is not surprising to learn that the directors have under consideration a proposal to rearrange the debenture and share capital of the company. Property account and the depreciation fund of £21,000 and mortgages for £8,150 is only £1,805 down at £314,243, although the reduction in the mortgages alone seems to have been £3,000, and the reserve fund, of course, remains at £10,000. Investments and loans to customers have risen by £2,584 to £65,807, and instead of there being a small debit at the bank the company now possesses a surplus of £240. It, however, owes £600 more to creditors at £12,502, while trade debts are £969 down at £38,070, and sundry debtors come to £601 less at £3,371.

YATES'S CASTLE BREWERY, LIMITED.

Gross profits for the year ended September 30, including rents and transfer fees, amounted to £38,700, and after providing for all charges, including £4,547 for repairs and £1,961 for com-

pensation fund, the nett balance was £1,102 up at £18,158. Debenture and other interest took £362 less at £14,881, and with £2,285 or £1,593 more brought in the available total was £5,561 against £2,504. The directors, however, do not feel that they are yet in a position to attempt to wipe out any of the arrears of preference dividend which have been accumulating since September 30, 1902, and after setting aside £1,000 to provide for special capital expenditure on rebuilding, &c., they carry £4,561 forward. During the year £1,938 was spent on property account, but £7,757 was deducted for compensation received, depreciation, &c., leaving the item £5,819 down at £571,011, and brewery plant, &c., is slightly lower at £5,253. Apart from the £300,000 borrowed on debentures and debenture stocks the company owes £16,455 on mortgages and loans and £25,002 to its bankers and other creditors, and against these the liquid assets are very small, consisting of £10,153 to come in from debtors and loans, £7,674 in stocks, £817 in investments and £161 in cash, exclusive of £10,470 in the hands of the debenture trustees. Reserves, all told, including £2,250 from premium on debenture stock issued by Wm. Yates and Co., Limited, amount to no more than £6,700, and the company's position falls very far short of being a comfortable one.

Farnham United Breweries, Limited.

During the twelve months ended September 30 this company earned a gross profit, including rents and interest, &c., of £54,436, and after providing for all charges, paying £999 for compensation tax and writing off £2,926 for depreciation and bad debts, the nett surplus was £24,246. Debenture interest and preference dividend having been paid, the balance available, with £6,346 brought in, was £14,917, out of which the ordinary shares get 8 per cent. and £500 is reserved for six months' compensation levy from April 5 to the date of the accounts, leaving £6,417 to be carried forward. Estates and goodwill appear in the balance-sheet as worth £478,030, but a note attached states that this figure is based on purchase cost, and is subject to present trade depreciation. When saying so much the directors might have gone further and stated whether or not this depreciation is covered by the reserve fund of £50,000. Plant, &c., amounts to another £17,410, and stocks at cost total £11,119, and as the issued share and debenture capital is only £425,000, the employment of the reserve as working capital is not quite sufficient for the company's needs. Further borrowing has, therefore, been resorted to, and mortgage debts and interest thereon come to £25,329. Trade liabilities are £5,469 against £9,725 due from sundry debtors, and cash, apart from £1,804 on debenture trustees' account, amounts to £7,234, but £7,838 has to be found for the debenture interest and preference dividend as well as £4,000 for the final dividend on the ordinary shares, so that the margin of free assets is a very narrow one.

Robinson's Brewery, Limited.

Including £4,327 brought in the nett profits for the year ended September 30 were £33,346, and after paying administration expenses and interest, writing off £1,280 for depreciation of leaseholds and providing £1,671 for licences compensation fund the nett balance was £27,552. Debenture interest and preference dividend absorbed £14,250 of this, and out of the balance the ordinary shares receive 5 per cent. and £2,000 is transferred to reserve, leaving £5,552 to be carried forward. With the present addition the reserve only reaches a total of £4,031 against a property and goodwill account of £431,505, and in other ways the company's position is none too comfortable. Liabilities to creditors, including secured loans, come to £41,352 against £16,351 to come in from debtors and £11,077 in cash, while stocks seem moderate at £33,214.

Offilers' Brewery, Limited.

Very little change took place in this company's affairs during the year ended September 30, an increase of less than £100 at £20,513 in the total revenue being accompanied by an almost similar advance in outgoings. With £505 more at £2,570 brought forward the nett revenue was £12,271 compared with £11,770, and after repeating the dividend of 8 per cent. on the ordinary shares and putting another £2,000 to reserve the increase is added to the sum carried out raising it to £3,071. Outlay on properties and plant, &c., has been increased by £6,538 to £304,979, but how or why the directors do not explain, and against this the reserve comes to £48,000. Sundry creditors are up £1,639 to £12,373, and, on the other hand, debtors have been reduced by £4,000 to £21,639 and cash is £2,431 lower at £2,647, but stocks have risen by £4,067 to £18,280.

Carter's Knottingley Brewery Co., Limited.

No profit and loss statement is published by this company, but the directors tell us that before arriving at the nett profit for the year ended September 30 they wrote off the difference between the book value of two licences lost and the compensation received. Business must have been distinctly better during the twelve months, as after allowing for this the nett profits were £1,393 up at £10,111. A much smaller balance of £1,436 was brought in, but the disposable total, nevertheless, amounted to £11,547 compared with £10,836 and the directors repeat last year's dividend of 9 per cent. on the ordinary shares and put another £1,000 to reserve leaving £2,147 or £711 more to be carried forward. Loans on mortgages, however, have been reduced by £1,497 to £26,971, and trading balances are decidedly favourable to the company, while stocks are valued at the moderate figure of £7,178 and cash has risen by £2,047 to £11,715, so that the current position is good enough. Freehold and leasehold properties and goodwill, however, although £1,357 down, stand at the comparatively high figure of £174,707 against a share and debenture capital of £156,410, and the modest reserve, which with the present addition amounts to nc more than £9,000 could stand a good deal of strengthening.

Alton and Co., Limited.

The gross profit for the year ended September 30 amounted to £33,553 or £270 in excess of last year's. Depreciation is allowed £2,165 and compensation fund £1,260, against £1,511 last year. After providing debenture and preference share requirements and a 5 per cent. dividend on the ordinary shares, £2,000 is applied to extinguishing value of leases account and £1,843 is carried forward against £1,375 brought in. Freehold and leasehold property, licensed houses, and goodwill, less depreciation, are valued at £499,304, or £4,832 more than last year. Plant, casks, &c., less depreciation, figure at £17,992 against £18,487. Stock-in-trade has been increased by £3,507 to £17,596. Book debts, less provision, have come down £7,759 to £24,385, while creditors are much the same at £11,669. Cash in hand, with £781 on deposit on account of debenture trustees, is not much less at £15,982. There is still no reserve fund. Depreciation is meagre, and cash does not cover the distributions.

Showell's Stockport Brewery, Limited.

Trading profits for the year ending October 5 are slightly lower than last year at £14,613 against £14,786. Rents, interest, &c., also are a few pounds less at £3,024, and total receipts have gone back £240 to £17,644. On the other hand, general expenses are higher by £167 at £3,231. So that with £1,487 brought in, the available balance is reduced to £15,901 against £16,111 last year. Out of this £432 more is allowed for depreciation and renewals at £1,927, but the compensation fund gets only £545 or £78 less. Interest on debentures takes £74 more, being this year £5,674, although the issued amount is unchanged. The 5 per cent. preference dividend takes £3,500, and the ordinary shares get but 3 per cent. instead of 5 per cent., and £1,550 goes forward. Properties stand at £234,140 or £3,184 less. Goodwill is still valued at £41,804, although eleven years old. Stock-in-trade is less by £467 at only £2,003. The balance of trade has shifted, being now slightly in the company's favour, debtors owing £6,644 against creditors for £6,081. The reserve fund is unchanged, and still microscopic at £6,081, while per contra investments somehow are £28 higher at £5,211, but neither the system of valuation nor their description is given. The directors consider the business satisfactory under the prevailing trade conditions, and are easily pleased.

New York Breweries, Limited.

After charging all expenses at the breweries and agencies, the profits for the year ended August 31, including rents and interests, were a trifle down at £67,296. Renewals and repairs to buildings and depreciation took £23,870 or £3,700 more, and after providing for New York and London office charges and debenture interest the balance was £2,658 smaller at £16,787. Adding £2,658 brought forward the surplus available was £19,447, which in ordinary circumstances would have allowed the payment of a dividend on the unified stock at least equal to the 3½ per cent. distributed a year ago. But as matters stand in New York the item of sundry debtors and loans standing in the balance-sheet at £157,825 can hardly be regarded as a liquid asset, even if it ultimately proves good, and as cash in hand amounts to no more than £9,220 it is not surprising to find that the directors have decided to carry forward the whole of the balance. Property and goodwill have been written down by £3,406 to £650,134 against which there is a reserve of £36,000 only. Creditors are less than £1,000 up and are moderate enough at £29,495 compared with the sundry debtors, which show an increase of £20,066, but stocks have been reduced by £2,828 to £25,175 and cash is £10,540 lower.

City of Chicago Brewing and Malting Co., Limited.

Shareholders in this over-capitalised concern will not find much in the report for the year ended September 30 to cheer them, although the sales by the American company did improve by 14,068 barrels to 386,641 barrels. The selling price was rather lower, and the cost of manufacture increased slightly, while the malting business, instead of improving as expected, showed a loss on the year's trading. For this loss the directors blame the Government, claiming that maltsters were misled by an overestimate of the barley crop in the official returns, and that sales made early in the season had to be carried out at unremunerative prices. Gross profits were £3,367 up at £98,292, but after providing for various charges and setting aside £4,824 as a reserve for doubtful debts and bills the nett balance was only £1,046 better at £18,028. Extraordinary repairs again absorbed £1,437, and another £13,002 was required for sinking fund, leaving a surplus of £3,588, or £1,174 more, which is added to the sum brought forward, making a total of £21,652. According to the usual summary of the financial position the American company had assets consisting of secured loans $259,930, sundry debtors and bills receivable $480,548, stocks in hand $522,418, and cash in hand and bonds in treasury $125,759, or a total of $1,387,655 against the reserve for bad debts $80,665, creditors and bills payable $160,813 and bond interest accrued $31,638, leaving a surplus of $1,114,539, or £228,858 compared with £240,121 a year ago. None of the surplus revenue came into the hands of the English company, and as the only receipts on this side were £18 from transfer fees, while London office expenses, income-tax, &c., took £2,519, the debit balance was increased from £5,475 to £7,976, and with 10½ years' preference dividend in arrears the outlook seems hopeless.

Hammersmith Distillery Co., Limited.

Profits on trading for the year ended September 30 amounted to £12,691, and with £1,106 from income on investments, &c.,

and £404 from income-tax recovered, the total revenue was £14,291. Of this £13,767 was retained as nett profit after paying directors' fees and other charges, and as £15,438 was brought in the disposable balance was £29,205. In spite, however, of this handsome surplus, the directors apparently do not consider themselves justified in making any great disbursements, and content themselves with paying out £4,750 on account of preference dividend arrears, leaving two years still outstanding. The report contains not a scrap of information to account for this disposition to hoard, and as the balance-sheet on the surface looks a pretty fair one, we can only conclude that undisclosed losses in the shape of depreciation or vanished licences stand in the way. Freehold and leasehold premises and goodwill are valued at £113,000 and plant, &c., at £39,094, and it must be admitted that the reserve of £1,363 is very inadequate, but, on the other hand, the company owns investments nominally worth £25,528 and yielding nearly 4 per cent. Creditors are light at £8,470 against debtors and bills receivable of £25,085, while stocks appear at £28,098 and £2,613 is held in cash.

THE PICCADILLY HOTEL.

All is preliminary with this new hotel company, whose second balance-sheet for the half-year to November 30 last has just been issued. The directors state that the building is now complete, and the decoration and furnishing progressing so fast that it is hoped the opening may take place next spring. The issued share capital is £648,035, and there is outstanding £600,000 of 4½ per cent. first mortgage debentures, together with an issue of £500,000 in prior lien debentures. Only £400,000 of these prior lien debentures have so far been issued as security for a loan of £400,000, and of that amount apparently only £144,812 has so far been actually paid, but the total of the balance-sheet is now £1,451,128. The expenditure on the hotel up to date, including managing director's fees charged to capital account, has been £361,324, and £958,000 has been paid for the properties on which the hotel has been built, while rent, taxes, insurance, debenture interest, and administration expenses to date have absorbed £71,893. This, however, has been set off to the extent of £10,780 by interest received on loans and deposits, rents and transfer fees.

ELYSEE PALACE HOTEL CO., LIMITED.

Trading profits for the twelve months ended September 30, after providing £11,928, or the same amount as in the previous year, were £809 lower at £43,693. On the other hand interest required about £300 less at £16,632, but other charges rose by £1,077 to £4,943, and a little more at £1,603 was allowed for debenture redemption. The directors, too, add an extra £500 at £2,500 to reserve, but they make up for this by only writing £1,000 off debenture issue expenses against £2,568 a year ago, and bring out a nett profit of £17,015 compared with £17,665. With a considerably larger sum of £12,185 brought in, the available surplus was £2,715 up at £29,201, and out of this the dividend is increased by ½ per cent. to 5½ per cent. and £1,286 is added to the balance carried forward making it £13,471. Capital expenditure rose by £2,971 to £604,239, and is now to be further increased by the £33,000 representing the surrender and cancellation of deferred shares hitherto shown as a separate asset, and against this the total accumulations consist of the general reserve of £7,500 and the debenture redemption fund of £6,955. Expenses of issuing and underwriting debenture stocks, &c., still figure as an asset to the extent of £18,500, and the policy of increasing the dividend even by ½ per cent. seems therefore to be hardly justified by the company's financial position. Sundry creditors have risen by £4,294 to £15,864, but this may be due merely to delay in making payments, as cash is £3,166 up at £29,119. Trading balances, however, are decidedly adverse, as there is only £7,551 to come in from sundry debtors, but stocks are valued at £10,112.

INVESTORS' MORTGAGE SECURITY COMPANY.

In spite of the further writing down necessary to meet the shrinkage in the value of the company's assets, this Edinburgh business seems to have benefited by the increased capital poured into it. For the year ended September 30 the nett profits, after paying £13,837 for interest, and including £2,424 brought forward, amounted to £40,372. After paying the preference dividends and 6 per cent. on the ordinary and "A" shares and ordinary stock £16,058 is left, out of which £990 is carried to the reserve and £13,000 written off the book value of investments. The reserve, including premiums received on the ordinary shares and debenture stock issued, "less expenses of rearrangement of capital," and the small amount added from profits, is now £82,000. Interest accrued on investments is at £30,750 up £4,153, compared with the previous figure, the value of the investments being fully £70,000 greater at £805,460 nett, the pernicious custom being followed in this company's accounts of hiding a number of figures which ought to be set out. This total, for instance, is arrived at after deducting the amount of the contingent fund. Where is that contingent fund and of what does it consist? Apparently about £204,000 has been received on account of capital compared with the previous figure, including nearly £12,000 in premiums, and the investment of this money would explain the increased return from investments. Debenture debt outstanding is at £336,500, £5,292 higher, and the company owes £16,680 to its bankers. Current charges show a decrease of £570 at £4,924, and interest paid on borrowed money is up £2,554 at £13,837. Is this merely a reflection of the increased rates charged by bankers, or is it the product of additional debt? Compared with the previous year the income from investments is up fully £12,000 and compared with two years ago it is £21,340 higher. A year ago £8,279 was added to the reserve. Nett profits, it should be added, are £9,946 up.

COSTA RICA ELECTRIC LIGHT AND TRACTION CO., LIMITED.

A further small improvement of £1,882 to £14,303 was shown in the nett earnings of this company for the year ended June 30 last, and with £234 from interest and transfer fees the total revenue was £1,979 up at £14,537. Debenture interest and administration expenses having been met there was a surplus of £3,961, but from this a debit balance of £1,374 has to be deducted, leaving £2,586, of which £1,771 is applied to the redemption of debentures. The balance, less £358 for manager's commission due but not yet charged, is written off the heavy discount and commission on the debenture issue standing in the balance-sheet as an asset for £20,505. The auditors again draw attention to various points in the accounts in terms similar to those of last year, and it is to be hoped that as the company continues to progress, the directors will devote all their energies to clearing up the balance-sheet. Apparently the outlook is promising, as the directors state that the extra power provided by the last issue of debentures has all been taken up, and that further capital will be required for the extension of the service in the near future.

TAYLOR'S DRUG CO., LIMITED.

They are careful souls, the directors of this Leeds company, and calculate their profits and their cash down to the last halfpenny, the trading profit for the year ended September 30 being given as £14,953 12s. 8½d. Including rents, interest, &c., the total income was £15,981, and after providing £1,786 for repairs and renewals, £1,000 for managing director's salary, £249 for income-tax, and £3,091 for interest, a balance of £9,855 was left. Deducting from this the debit of £3,466 brought forward, the available surplus was £6,389, out of which £2,081 is put to reserve in accordance with the terms of the trust deed for the debenture-holders, and a dividend of 5 per cent. is paid on the ordinary shares, leaving £630 to be carried to the new account. A year ago the directors took a big step in the right direction, and wrote off the cost of proprietary rights, together with the premium on debentures redeemed, and cost of the new issue, amounting in all to £19,135, out of reserve, reducing that fund to £13,398. A further £778 is now written off for loss on valuation of shares in other companies, so that the fund, with the latest addition, now amounts to £14,681 against freehold and leasehold properties, &c., valued at £103,988. The paid-up capital is only £68,202, and the debenture debt, with accrued interest, is £30,356, and as stocks are heavy at £70,409 the company has had to resort to the moneylender, with the result that loans on mortgage come to £41,422, and liabilities to sundry creditors are also large at £20,840. On the other hand debtors owe no more than £939, cash is £2,033, and the investment in shares of other companies would seem to have been a very disastrous speculation as these are now worth a mere £262.

PHILLIPS AND MARRIOTT, LIMITED.

This company's trading profit for the year ended September 30 was £23,833 or £2,621 more than in the preceding twelve months. Repairs and maintenance, however, showed an increase of considerably over £1,000 at £6,019, and an extra £500 at £5,835 was allowed for depreciation, leaving £11,979 nett as compared with £10,970. Sum brought forward was £1,112, increasing the available total to £13,091, and from this debenture interest and preference dividend require £4,987. The distribution on the ordinary shares is put up 2 per cent. to 9, another £1,000 goes to reserve, and £1,308 is carried out. Total reserves now add up to £11,500, not a large sum, against a property account of £165,000, but goodwill £13,500 is not heavy.

BULLER'S, LIMITED.

Although the output of the company has been nearly up to the average, the higher prices of raw materials and the depressed trade in South Africa, with, at the same time, a difficulty in advancing prices, have tended to reduced profits. Working account shows a credit of £22,662, which, with £1,085 brought in, leaves £23,747 available. After paying preference interest and a dividend of 10 per cent. on the ordinary shares, £1,247 will go forward to next account. The balance-sheet shows land, buildings, goodwill, patents, &c., at £298,008, book debts £17,000, stocks £36,748, cash £300, investments in Consols at cost £27,512. Against these items are Reserve £52,500, and creditors £22,740. The position does not appear strong, and notwithstanding feeble cash resources the profits are divided up to the hilt.

STARKEY, KNIGHT, AND FORD, LIMITED.

The gross profits on sales amounted to £71,350, rents and interest £9,725. Trade expenses £22,778 and general expenses £35,814 being deducted, a nett profit is declared of £22,482, a slight improvement on last year's. Out of this, after providing for debenture and preference interest, £3,000 is added to reserve, a dividend of 10 per cent. is declared on the ordinary shares, and a bonus of 5 per cent. or 10s. per share on last year, and £1,565 is carried forward. In the balance-sheet estates and goodwill figure at £275,800, stock-in-trade £18,883, plant £19,300, book debts, &c., £31,107, and cash £10,852. Liabilities on sundry creditors £14,790 and reserve with this year's contribution £29,000.

WM. FISON AND CO., LIMITED.

In presenting the first balance-sheet and report covering the half-year ending October 31, the directors announce a gross trading profit of £11,080, and a total revenue of £11,675. Of this £1,250 was earned before incorporation, and is placed to capital reserve account. Interest paid to vendors absorbs £2,003 and £750 is put to reserve. The preference dividend on

calls paid amounts to £2,129, and 6 per cent. is paid on the ordinary shares for five months from July 1. This leaves £1,025 to go forward. Lands, mills, &c., figure at £130,680, and stock-in-trade is £141,388, against issued capital £270,000. Debtors owe £38,660 against creditors £27,967, and bank overdraft £4,838. Cash in hand £897.

INGALL, PARSONS, CLIVE AND CO., LIMITED.

A drop of £6,667 took place in this company's profits for the year ended September 30 last, and that surely spells approaching disaster. The free balance, indeed, was only £3,767 after meeting debenture interest, directors' and auditors' fees, and paying a small amount of £1,270 on account of depreciation of plant. Another £1,767 was devoted to the maintenance of plant and working stores, so that £3,038 in all was thus appropriated. Out of the balance of £3,767 left over or £3,924, including £157 brought forward, the directors have paid a dividend of 2s. per share on the £2 preference shares, being 5 per cent. against the 10 per cent. to which these shares are entitled, and carry forward £1,201. Nothing at all is thus available for the ordinary shareholders and the balance-sheet does not indicate any great hope for the future. It is true the company has about £3,212 more of cash available at £13,360 and it owes £1,709 less at £6,347 to sundry creditors, but enough has not been written off for depreciation and there are no reserves to draw upon, while the amount mentioned above set aside for depreciation of plant has been neutralised to the extent of £485 by fresh expenditure. Sundry debtors, however, owe £612 less at £40,496, but the goodwill remains at £51,052.

ALEX. MACDONALD AND CO., LIMITED.

This old and well-known granite quarrying, dressing, and polishing firm of Aberdeen has been subjected to drastic changes recently, with the result that £15,000 nett has been written off the capital account. The gross writing down was £16,458, but the year ended February 3 last gave a profit of £1,458, which was used as a set-off. No less than £4,098 has been written off the Aberdeen premises and about £5,800 off machinery, plant, and tools. Many old members of the staff have been removed and severe economies are being introduced in all departments. The prospect for the future ought, therefore, to be much more encouraging.

LAW CAR AND GENERAL INSURANCE CORPORATION.

This is a new non-tariff company started to do almost every kind of insurance business outside life insurance—fire, workmen's compensation, motor car, cycle of all kinds, sickness and accident, employers' liability, machinery, plate-glass, &c., &c. It has only a paid-up capital of £12,909 or of £15,076 including calls due in the beginning of last month, but it seems to be going to work in a vigorous fashion, and the nett premium income of the period from August 4 last year to September 30 is put at £68,100. Claims paid and estimated are entered at £6,029, and current charges, which are always high in these circumstances, have taken about £35,000. From the balance £30,000 has been set aside to cover unexpired risks, being equal to 44 per cent. of the nett premium income, £4,000 has been placed to a reserve account, and £2,000 is held to meet outstanding claims. All the preliminary expenses are written off and included in the £35,000 just mentioned, and after these adjustments have been made the balance carried forward is £7,187. This is not at all a bad display for a start, and by-and-bye when the expenses of management are brought down, the results may be better still unless heavy claims arise, which they generally do after a few years.

BOROUGH OF PORTSMOUTH WATERWORKS COMPANY.

The nett available balance for the half-year ended September 30 amounts to £28,153, and after payment of full statutory dividends £9,470 is carried forward against £10,076 brought in. During the half-year 2,849 yards of street mains and 92 yards of trunk mains have been laid and 610 additional services connected. The cost of these additions raise capital expenditure in balance-sheet by £3,550 to £694,044. With £1,000 contributed during the half-year the contingency fund amounts to £16,920 and is represented by Consols at 85 £16,693, and the balance in cash at bankers. Capital account has been increased during the year by the issue of 2,000 £5 shares at just under £6 5s. 6d. apiece.

BLACKPOOL PIER COMPANY.

Nett revenue for the twelve months ended October 31 was £352 smaller than for the previous year at £9,055, and although £66 more at £1,367 was brought forward the total available came to £286 less at £10,708. On the other hand, however, interest payments were not quite so heavy at £931, and nothing is written off the stock of chairs this time, so that the nett surplus is £9,491 against £9,698. Of this another £1,000 is transferred to reserve, but only £250, or half last year's amount, is transferred to improvement and contingent fund in order to enable the directors to repeat the dividend of 10 per cent. and bonus of 2 per cent. on the ordinary shares and to carry forward the slightly increased balance of £1,410. No attempt has yet been made to provide for depreciation on the pier, which stands at £112,797, and the reserve after 45 years totals no more than £12,000, or about 6½ per cent., and even that is all employed in the business. The contingent fund has been charged with £867 for cost of damage to pier and part cost of painting and redecking, and with the sum now added comes to no more than £8,781 or a decrease of £617. Sundry liabilities are up a few pounds to £1,435 while debtors owe a mere trifle of £12, but cash has risen by £484 to £9,812.

THE SOUTH BRITISH FIRE AND MARINE INSURANCE CO., OF NEW ZEALAND.

In its year ended August 31 last this company made a profit of £47,334 after meeting all outstanding losses and adding £5,000 to the insurance fund. The balance brought forward was £25,406, after paying away £15,000 as interim dividend on the shares. A similar distribution was recommended for the second half of the year, bringing the entire dividend up to 6s. per share or 15 per cent. for the year. Then £20,000 is transferred to a reserve fund and £2,733 credited to the officers' superannuation and provident funds, while sundry other small sinking funds are provided for. After making all these assignments and paying the final dividend, the amount left to carry forward is £19,108.

DIVIDENDS ANNOUNCED.

RAILROAD.

Louisville and Nashville.—Semi-annual of 3 per cent, payable Feb. 10.

MINES.

Apex.—10 per cent. (2s. per share) for half-year ending Dec. 31, payable Jan. 13.

El Oro Mining and Railway.—1s. 6d. per share, payable January 15.

Ivanhoe.—Third quarterly interim for 1907 of 5s. per share, payable Jan. 29.

Rhenosterfontein Prospecting.—10 per cent.

Village Main Reef.—5s. per share.

MISCELLANEOUS.

Bargang Tea.—3 per cent.

Castle Street Arcade.—At the rate of 40 per cent. per annum.

Ghoir Allie Tea.—5 per cent.

Hardy's Crown Brewery.—Interim at the rate of 20 per cent. per annum.

International Coal.—Further interim of 6s. per share, making 10s. per share for current half-year.

John Crossley and Sons.—1s. 9d. per share on the ordinary shares of £2 each, fully paid, making 2s. 9d. per share (or nearly 7 per cent.) for year ended Dec. 7.

Lankapara Tea.—5 per cent.

Leyland and Birmingham Rubber.—Interim of 5 per cent. (6d. per share) for half-year to 31st inst.

Main Colliery.—Interim of 10s. per share on the ordinary shares.

Majuli Tea Company.—Interim of 3 per cent. on the preference capital, payable Dec. 31.

Manchester Palace of Varieties.—Interim at the rate of 5 per cent. per annum.

Owen and Robinson.—5 per cent. for half-year ended Nov. 30, on the ordinary shares.

Parke's Drug Stores.—Final on the ordinary shares for half-year ended Sept. 30, at the rate of 6 per cent. per annum, will be paid on Dec. 31.

Rajmai Tea.—Interim of 5 per cent.

Romai Tea.—2½ per cent.

Tarapaca and Tocopilla Nitrate.—Interim of 5 per cent. for 12 months ending Dec. 31.

United National Collieries.—Interim of 10s. per share.

MINING RETURNS.

Brilliant and St. George United.—Crushed 815 tons quartz, value, including concentrates, &c., £4,191.

Brilliant Extended.—Crushed 2,740 tons for £4,806.

British Broken Hill.—2,834 tons crude ore produced 487 tons concentrates, containing 307 tons lead and 13,149 ozs. silver; also mined 105 tons carbonates; total, 2,939 tons.

Camp Bird.—Crushed 6,669 tons ore yielding 7,389 ozs. bullion, and 495 tons concentrates. Received from sales of product:—Bullion (including cyanide bullion), $121,559; concentrates (670 tons), $39,990; total, $161,549.

Carrington's United.—Trial smelting of 76 tons produced 7 tons copper, 31 ozs. gold, 121 ozs. silver.

Chinese Engineering.—Output 22,000 tons; sales, 16,000 tons; consumption, 1,600 tons.

Day Dawn Block and Wyndham.—1,636 tons quartz value, including annual clean-up, residues, &c.; of £7,000.

Dolores.—Production, $55,000; profit, $20,000.

Esperanza.—Crushed 13,000 tons dry ore; concentrates shipped to smelter, 362 tons dry ore: profit, £17,427.

Hyderabad (Deccan).—Output of coal 35,358 tons.

Mexico of El Oro.—Crushed 5,669 tons ore; value U.S. $62,530 profit, $21,654.

North Broken Hill.—Treated 2,500 tons crude ore, producing 420 tons concentrates, containing 293 tons lead and 7,980 ozs. silver.

Ouro Preto.—5,680 tons ore, 1,920 ozs.

Stratton's Independence.—427 tons shipping ore, averaging 1 oz. 12 4-5 dwts.

Tasmania Gold.—Crushed 3,930 tons quartz, 2,144 ozs; 144 tons concentrates, 237 ozs.; 2,055 tons cyanide, 130 ozs.; total, 2,511 ozs.

Tasmanian Copper.—Blinman: Treated 3,482 tons of ore, &c. (inclusive of purchased ores), producing 169 tons of matte and metallics, averaging 56 per cent. copper.

United Rhodesia.—Jumbo: 2,407 tons, 1,740 ozs. Properties n tribute: 2,550 tons, 491 ozs.

COMPANY MEETINGS.

LE ROI MINING.

The eighth ordinary general meeting of Le Roi Mining Co., Limited, was held, on Monday, at Salisbury House, London Wall, E.C., Mr. T. D. Grimke-Drayton, J.P. (chairman), presiding.

The Secretary (Mr. Harold A. Wesson) having read the notice convening the meeting and the auditors' report,

The Chairman said: It is a matter of great regret to your board that the profits have not been greater, but when we take into consideration the heavy fall in the price of copper realised in the later months of the year, the frequent stopping of work owing to the want of fuel and other causes, together with the high cost of wages, you will see how many difficulties we have had to face. The Northport smelter, for instance, only had a continuous run of four months, and the Trail smelter was unable for a long period, owing to being closed down, to take our ore which was contracted to it. During the year there has been a considerable increase in wages and in the cost of nearly all materials. Despite this, more has been spent on development than for several years past. Our ore varies in quality, and it was unfortunate that the grade of the ore showed a lower value just when we wanted all the help we could get. You will see from Mr. Larson's report that our expectations of finding ore in the Black Bear have been realised. There is one item on the debit side of the balance-sheet which, I think, calls for some explanation. At June 30, 1906, the balance-sheet showed a credit balance in profit and loss account of £171,927, of which £90,097 was in cash. This item is, I think, to some extent misleading. It would be impossible to ever distribute in dividends a considerable part of this credit balance, for the reason that it is invested in plant, improvement, development, and the like, owing to the company having started with far too little working capital. Your directors propose to give this matter their serious attention and to deal with it in the next balance-sheet. We propose to alter the financial year, and make it end on September 30. You will notice in the last monthly postcard that we had appointed Mr. W. A. Carlyle, late general manager of the Rio Tinto Company, as consulting engineer to the company. We wanted to get three things—firstly, a man who had, if possible, previous experience of the peculiarities of Rossland mines; secondly, who was not connected in any way with companies whose interests might clash with our own; and thirdly, whose name and great and varied experience would command the confidence of the shareholders and the general public. I believe that in the choice of Mr. Carlyle we have met all these requirements.

Mr. G. W. Wilson seconded the resolution.

Mr. A. J. McMillan (Managing Director) said: Everything possible has been done to achieve satisfactory results. Owing to many difficulties, we have had a most worrying and trying year, notwithstanding which we have managed to keep working expenses down to a very low level. The grade of the ore has shown a falling off as compared with the two former years amounting to nearly $2 per ton, which on our output of last year represents a difference of about £50,000 in value. This falling away in values we cannot prevent, much as we may regret it. It is an experience we have often passed through before, and the fact that Le Roi ore bodies are very irregular both as regards size and value is one to which the attention of the shareholders has frequently been called. Development work has been well kept up, and we have been successful in locating large ore bodies on the lower levels. Much of this ore, so far as at present shown up, is too low in value to yield a profit, though small bodies of pay ore are met with from time to time associated with the larger bodies of low grade ore. We are vigorously pushing exploration work on the lower levels and in other parts of the mine, and hope yet to come into larger bodies of payable ore. In certain parts of our property we have had an opposite and much more satisfactory experience. The development on the Black Bear, which has resulted in opening up an ore body of excellent grade, is a case in point. In 1906 ore was discovered there for the first time, and the assay value of the ore already taken out from this one body alone amounts to about £90,000. The fall in the price of metals—copper, silver, and lead—has been very great during the last few months. As regards the fall in the price of copper, that is a matter of great importance to us. Practically all the copper producing mines in British Columbia, outside of Rossland, have closed down, whilst many of the large copper mines in the United States and Mexico have either closed down altogether or have greatly reduced their output. The monetary stringency in the United States has caused a great falling off in the demand for copper, and until this demand improves the price will probably not rise to any great extent. The falling off in the output of copper should, however, result in higher prices immediately there is any considerable demand for the metal. Though the year just closed has not been as successful as we could have wished, we are entitled to remember that it is considerably better than some of its predecessors. Looking forward, there is a satisfactory feature to be noted in connection with labour, in this respect, that the men employed at our mine and smelter have agreed to accept as from the 1st of this month a substantial reduction in wages. It may be of interest, perhaps, if I call your attention to the fact that one-half, or thereabouts, of Le Roi ground is virgin territory not yet developed, and that we are pushing exploration work in this new ground, as also in different parts of the older portions of the mine. Though the present days are not quite so bright as some that have gone before, I look forward with hope to the future, trusting that better times are in store, and assuring you that, at any rate, nothing will be left undone to bring about that improvement you and I, and all of us, so earnestly desire. I have much pleasure in supporting the resolution.

Mr. Horton said that Mr. McMillan had referred to the fall in the price of copper. As far as he had been able to follow the papers, the price of copper up to July had been phenomenally good, and the fall in the price was only quite recent; therefore, they ought to have had the benefit of the high price of copper in this year's accounts. Then, as regarded the low grade of the ore, he had followed the monthly reports, and reckoned it out as being worth £2 per ton. In some companies they could treat the ore at 16s. per ton, and, therefore, he thought they had had ample margin to make a decent profit.

Mr. McMillan, in answer to a question, said the cost per ton was 10 dollars 2 cents on 131,000 tons, but there was a reduction at the refinery for losses in dealing with the matte.

The resolution was then put and carried unanimously.

A proposition to alter the articles of association in regard to the directors' remuneration was negatived on a show of hands, but it was carried on a poll by 69,350 votes to 1,094.

IND, COOPE AND CO.

An extraordinary general meeting of Ind, Coope, and Co., Limited, was held at the Great Eastern Hotel, E.C., on Monday, for the purpose of submitting a series of 13 resolutions altering the articles of association in regard to various payments to Mr. E. Murray Ind and the other directors of the company. Sir Thomas Skewes-Cox presided.

The Secretary (Mr. C. E. Sheffield) read the formal notice.

The Chairman asked for the sympathy of the shareholders in respect of the resolutions which were to be submitted. Their company was a very important one, and one of great magnitude. The shareholders would be aware that the new regulations were unanimously passed on July 3, 1906, but inasmuch as it was discovered that there was an irregularity in their adoption, the present meeting had been called to ask the shareholders' sanction to these resolutions. The circulars which had been sent out had fully explained the resolutions. He wished to say this, that it was the desire of the directors to take the shareholders into their confidence and to treat them in the most frank and generous manner, which he hoped would engender good feeling on behalf of the shareholders themselves. (Laughter.) He put forward the hope that there would be co-operation between all concerned, and that the shareholders would approve of the resolutions.

A scene of uproar broke out immediately after the chairman's address, being led by Mr. A. Normandy, who spoke in most indignant terms. In the course of a lengthy address he stated that that company had not paid any dividends for several years, and the directors had called shareholders there that day to pass resolutions giving the directors or some of them altogether over £30,000 which the directors had "secretly been paying themselves for years" out of the funds of the company without authority or knowledge of the shareholders. He asserted that the directors' resolutions admitted there was a secret agreement dated January 1st, 1902, giving £1,000 a year for 10 years, and after that £500 a year for life, to Mr. Murray Ind, in addition to his share of £3,000 allowed for directors' fees and £300 a year paid to him as chairman. In the printed evidence Mr Murray Ind admitted he was managing director until 1902, and that he was then receiving £1,500 a year, in addition to his share of £3,000 allowed for directors' fees. He also admitted he was warned by Messrs. Dawes, the company's solicitors, that his new pension agreement might be disputed later on, and to avoid this a consideration clause was put in, as to which the late Mr. Justice Kekewich said: "I take leave to doubt whether there was any real consideration at all, and whether this clause was not inserted merely for the purpose of giving a colourable value to this agreement." The directors admitted that the total thus secretly paid since 1902 to Mr. Murray Ind was now £4,666, and they asked the shareholders to confirm that

Mr. Priestly, K.C., advised Mr Normandy to be satisfied with the results achieved so far, and not to attempt to carry the case to the Court of Appeal, which might result in his losing all that he had already got.

Mr. Helby urged Mr. Normandy to "bury the hatchet," and remarked, amidst laughter, that the Christmas atmosphere ought to be conducive to harmony.

Mr. Edmunson again addressed the meeting, and pointed out that the late Mr. Justice Kekewich had distinctly declared, as regarded the late directors, that there was absolutely no element of fraud, to which Mr Normandy retorted that Mr Justice Kekewich had never had all the statements which the shareholders now possessed before him, and, moreover, fraud was never alleged.

The Chairman replied, and said there had absolutely been nothing in the nature of bad faith.

After a violent exchange of personalities between various speakers, the resolutions were proposed seriatim, and each was criticised by Mr Normandy. They were put to the meeting, with the result that some were carried, some were lost, and the voting upon some was challenged. In almost every case a poll was demanded on either one side or the other.

The Chairman stated that the board held proxies for no fewer than 8,000 votes, against 1,500 votes which had been given to Mr Normandy. In the result, therefore, despite the protest of the shareholders and the assertions that the whole thing was a "farce," the proxy power of the board carried the day.

The Times

WEEKLY EDITION.

Every Friday. Price 2d.

CONTAINS A CAREFUL

Epitome of the Events of Interest

DURING THE WEEK.

TOGETHER WITH THE MOST IMPORTANT

LEADERS AND SPECIAL ARTICLES FROM "THE TIMES"

IN EXTENSO.

Mr. R. B. Haldane and "Public Opinion."

The Right Hon. R. B. Haldane, M.P., Secretary for War, has addressed the following letter to the Editor of PUBLIC OPINION:—

WAR OFFICE, 1st October, 1907.

Dear Mr. Parker,

I think that in the new form of "Public Opinion" under your editorship, you do well to make prominent what is concrete and living in the shape of the opinions maturely formed of men who are trying to do the work of the nation and of journalists the standard of whose criticism is high. What interests people is that which is expressed in a concrete form and has in it the touch of humanity. The views of strenuous spirits and the criticisms of really competent critics given in their own words comply with this condition. Your paper will succeed if it can only keep up to this standard, and I think you have brought it on to the right lines

Yours faithfully,

R. B. HALDANE.

Percy L. Parker, Esq.,
Office of "Public Opinion,"
